PUBLIC HEALTH WARNING

This is an effort to inform and equip you to protect yourself, your family, pets, your children's future, and our world, written by your "affected" neighbor who learned these things "the hard way". It's also my effort from the fall of 2022 to show what is being built around us technology-wise. Not only did I not get it all, but they just keep deploying more and more and more but this should open your eyes to why you NEED to get informed and take some action.

FYI: 40% of humans have a MTHFR gene and its mutations that mean they can't process toxins such as the electromagnetic, pulsed microwaves, and radio frequency radiation being emitted by all of this new technology in our modern wireless wild west. We are The Creators "early warning messengers" FOR YOU! This reckless use of wireless is making your fellow humans sick, but the gov't didn't bother telling us for reasons we can only imagine. Now it's time for you to choose whether you want to be a friend of your fellow man and the environment or a friend of the gov't and their mutually benefitting corporations!

May 27th, 1990, A. D.

(Insisted on being written in February of 2023 to show me what I needed to see!)

May 27th, 1990, A.D.

I wrote down a message GOD spoke to me.

"Isaiah 54 Shall Apply" is what it read.

I noted it in my first adult journal and then I went to bed.

28 years went by before someone brought this back to mind.

When I went back to read it, I was amazed by what I'd find.

It was like reading a story of where all I had been.

It even showed my divorce, which I didn't see back then.

I sought to live a PURPOSED LIFE seeking God's presence every day.

So He could tell us a story and help us find His way.

It's been a challenging but fruitful journey, an alternative path I took.

God then insisted I write an extensive book.

It had been out about a year when the story took a radical turn.

There were urgent things He needed to show me – we have a lot to learn.

As it turns out as we arrive at 2023, I found myself thinking about May 27th, 1990, A.D.

How I'm exactly where that chapter in Isaiah said that I would be.

I enjoy looking for God in the story happening, as it assures this isn't "just me".

First thing I notice in 2023 is that message is turning 33.

Realizing this year, 66 years I'll have been livin'

But realized too I wasn't actually 33 when it was given.

"But wait a minute" my mind ran ahead.

"How many days between those two?" I said.

I could hardly believe the answer when it was shown to me.

3 weeks and 3 days later I turned 33.

One step further, as I look around.

Another set of 3's is what I found.

February 2023 helps me to know.

We arrived here 3 years and 3 months ago.

So, when I say "I've been sent" to help you see the error in our direction.

I hope you too can see the thumbprint of God and know the information comes with deep affection.

Think of the seeding birds, the flora, and the bee

Living without them is a life we don't wanna see.

I can't believe my eyes as I look across the nations.

And see the boundless destruction caused by corporations.

Before I go, I just have one question.

What will it take before WE THE PEOPLE respond, does this need to be an even bigger lesson?

This document can be read at: NoATT.blog as the Featured Post, where the cited links are active. I do encourage you to read it here first without the distraction of links that will take you off course and down into many rabbit holes. I want your immediate focus to be on the entire message. The live links are me proving my accusations so just know that what I say, I can back up with credible sources. Read it here, then go there and go link crazy to verify that what I'm presenting is in fact true. I hope you do. Then you'll KNOW and hopefully join efforts to stop the madness!

Let's get started:

So, I got pulled into the awareness of what I'm about to share when I upgraded my iPhone 4 to a 5C in Aug/Sept of 2016. A few days later I noticed that my hands were aching when I held/used the phone so I bought a case that reportedly reduces any harmful emissions, but my hands would still ache, just to a lesser degree. It still didn't dawn on me that I had purchased a "radiation blocking case". Wait a minute! What? **Yes, these "cell phones" actually emit radio frequency in the form of pulsed microwave radiation with cumulative harmful effects in our body and our government knew it and facilitated this!** I spent less time with it in my hands hoping my body would calm down by doing so but a few weeks later I touched the screen of my mom's iPhone 6S and a pain shot up my arm that felt like a blood pressure cuff was on too tight. It stayed at that intensity for two hours before it began to subside. Over the next few days, I realized I was hypersensitive to everything wireless; even typical wiring issues in our home had to be addressed.

A few days after the initial event with my phone I got out of the shower and was almost knocked off my feet by what felt like a literal 7-8' wave of energy coming from our home office. Nobody needed to explain that to me. It was a LITERAL WAVE of ENERGY that hit me as if I was at the beach. Wrapped in a towel, I stepped across the hall to see if Mom had plugged up the Wi-Fi modem, which we'd begun unplugging at night after my initial injury event. I saw her standing there with the plug in her hand but just beyond her hand was the AT&T wireless alarm box. I shook my head and zealously unplugged it, realizing that my left wrist, closest to where it sat, always ached if I worked from that desk. In today's world a doctor would've diagnosed carpal tunnel, done surgery, and I would've returned to my unhealthy electrical environment and the computer at that desk while the real culprit would've never been identified. Maybe cancer in the breast nearest to it would've been next because my left breast became angry and painful, and the coverage area was growing daily. Thank goodness I had written a book and included a controversial method to kill cancer but only because I understood the theory of why it would work. It worked for the man on the video, and I found many more testimonials, even credible doctors so I tried it, along with bathing that breast and underarm in iodine and it worked! In five days, I had that fire put out. *Now mind you* I was no longer being exposed to 24/7 WIFI, the wireless alarm system was now unplugged, and I wasn't holding my phone anymore. It was now OFF, not airplane mode.

That AT&T alarm system was plugged into the Wi-Fi modem and had four antennas across the top of it and there were receiver units all throughout the house it communicated with. I never once considered that this could impact my electrical system, my immune system, and put my overall health in jeopardy. I was living exactly like the television ads showed me to live and had no idea, until now, what my world might look like if I could SEE all the waves running through our home, and therefore, our body's! BTW: I love technology, so this isn't a GET RID OF IT EFFORT, but we have missed some vital-to-life information and need to do some immediate corrections! Sadly, all the people that should be telling you this are profiting from it moving forward.

I had recently published a book and ended up being introduced to the world about 14 months earlier by a world-renowned doctor through providential events so when I needed to figure out what to do, I reached out to my now expansive online base of fellow health hackers. Fortunately, it's a vast group of unsponsored knowledge and I got my first clues. **"If you've ever had heavy metal exposure or been bothered by mold, you're more susceptible...certain genetic profiles can't detox as quickly as others..."** I'd had both, in fact part of my recovery story is how my mercury (metal looking) dental fillings were destroying my health. I suspect I have at least one gene mutation that would explain my vulnerability. BUT NOW, I can see more and more people reporting adverse health issues as the density of technology has escalated and they do not have a history of mold or heavy metal exposure. **Maybe those with heavy metal, mold, and genetic leanings would just be the first wave of people affected...WARNING MESSENGERS!**

I hardwired our computer, put grounding techniques in place, shielded data cords...and began searching online for more knowledge. I reached out on my Nextdoor.com account and respectfully inquired about the safety of a cell tower in our neighborhood based on what I was learning online from very credible scientific and medical sources. My mind was racing... "Why would anyone put something so deadly on the market by our homes" and yet I knew because it was a big part of the book I'd written, how gov't oversight has failed us and the massive corruption that seems inherent in every agency as collusion with industry for profits has become "the new normal" ...BUT THIS was a whole new level of awakening! Many days as I read for hours on end, six days a week for 7 months, my eyes would be full of tears seeing what's being done. When I'd share things with family and longtime friends who knew me as grounded and informed, I'd get blank stares as if they couldn't even process what I was telling them. Nextdoor.com disabled my account just for asking if anyone could comment on concerns about the large tower in our neighborhood, but before they did, I received and captured this reply from a neighbor:

What you are saying is all true. I am an Electrical Engineer who worked in the Semiconductor field for 20 years and we use to do EMI testing for compliance (which is an arbitrary value set by the people who are supposed to be protecting us but they are also sitting on the boards of these private corporation, so definitely a conflict of interest.) and the reason for that is to make sure that I am interested in coming and learning more about EMI and cell phone effects on soft cell tissue. I am afraid a whole generation of young people are being insidiously harmed by this and the so called protecting agencies do not care. Yes, wiring your home is good, I have done that to my house as well and I also have wired my house so most of my bedrooms are quiet and do not have these toxic EMI and electrical fields. I have a RF meter that I go around to check for strong fields and tend to avoid those places. You can put me in your contact list. Here is my e-mail: [REDACTED] I am sad and also excited that people are beginning to see the harmful effects of it and as more people learn of the toxic effects of technology we can force our corporate peddlers that claim to be "doing good" but in reality are destroying or at least causing major harm to this human project.

Notice his comment, **"I am afraid a whole generation of young people are being insidiously harmed by this and the so-called protecting agencies do not care."**

FYI: This new toxin can be described by many terms which can be confusing. It's essentially in the category of Non-Ionizing Radiation on the Electromagnetic Spectrum. It can be referred to as Radio

Frequency Radiation or Radio Frequency Microwave Radiation or Electromagnetic Radiation. It then becomes about whether it's high frequency or low frequency or whether it's pulsed or modulated or carrying transient current...but keeping it simple, let's just talk about "all this new technology" being deployed as if humanity knows what they're doing. They do not. **Never has it been considered safe to expose living things to 24/7 manmade or non-native radiation of any kind, until wireless tech was brought on the scene. Suddenly we forget all science and begin saturating the Earth.**

Early on I found a man online who'd had a similar experience in 2002. He lives in the UK. He answered his cell phone and a pain shot through his head and he became "sensitive" to electrical fields. He pointed out that he wasn't even a heavy user of the phone. It was no longer "conspiracy" at the point of my acute injury but when I saw my new Radio Frequency/RF meter go into OVERLOAD mode when my cell phone rang, discussion over. **Meter readings don't lie, and we need to become familiar with them, use them, and learn to mitigate the issues or you and those you love (including your pets) are going to suffer horribly as this electronic tsunami is building out.** Thank goodness he'd written a 92-page ebook that told us exactly what to do. His name is Lloyd Burrell, and he can be found at his website <https://ElectricSense.com> and on YouTube. He has a very recent book that can help you know how to tame and heal your wireless world. I've also put some links in the Solutions category of the NoATT.blog. Here's a link to his book on that site in that category so go look around and learn the options you have: <https://neighborsorganizingagainsttrespassingtechnology.blog/2020/08/09/emf-practical-guide-by-lloyd-burrell/>

The Federal Communications Commission (FCC), which supposedly regulates the safety of wireless tech was recently sued by Robert F. Kennedy, Jr's Firm and Environmental Health Trust. The Federal Appeals Court Judge in D. C. rebuked them for "ignoring the studies showing harm from wireless tech". The FCC was ordered to immediately pay for the 11,000 pages of evidence showing harm! Yes, they ignored the studies and haven't updated their safety standards since 1996!

Learn more about these suits and view key documents at this link:

<https://ehtrust.org/environmental-health-trust-et-al-v-fcc-key-documents/>

The four Amicus Briefs listed at the end of the document above are a quick study on the issues:

1. AMICUS BRIEF OF NATURAL RESOURCES DEFENSE COUNCIL AND LOCAL ELECTED OFFICIALS IN SUPPORT OF PETITIONERS <https://ehtrust.org/wp-content/uploads/20-1025-NRDC-amicus-brief.pdf>

2. BRIEF OF AMICUS CURIAE JOSEPH SANDRI IN SUPPORT OF PETITIONERS URGING REVERSAL <https://ehtrust.org/wp-content/uploads/20-1025-Amicus-Brief-Joe-Sandri.pdf>

3. AMICUS BRIEF OF DAN AND CATHERINE KLEIBER AS AMICUS CURIAE IN SUPPORT OF PETITIONERS ENVIRONMENTAL HEALTH TRUST AND CHILDREN'S HEALTH DEFENSE <https://ehtrust.org/wp-content/uploads/20-1025-Kleiber-Amicus-Brief.pdf>

4. AMICUS BRIEF OF BUILDING BIOLOGY INSTITUTE IN SUPPORT OF PETITION FOR REVIEW OF FINAL ORDER <https://ehtrust.org/wp-content/uploads/Brief-of-Amicus-Curiae-Building-Biology-Institute.pdf>

and here:

2-page factsheet on EHTrust V. FCC here:

<https://ehtrust.org/wp-content/uploads/EHT-et-al.-v.-FCC-Factsheet-EHTRUST.org-1-1.pdf>

I recently found a book titled, ***Hidden Dangers - How governments, telecom, and electric power utilities suppress the truth about the known hazards of electro-magnetic field (EMF) radiation*** by a retired electronic warfare specialist. I love that like me he shares links to the headlines he's presenting. He's arranged his information by category of emitter whether it's a tower, utility meter, cell phones or...Chapter 10 goes into great detail about what the military knows and has known, and the pressing subject of 5G.

You can find his book on Amazon at this link: https://www.amazon.com/Hidden-Dangers-governments-utilities-electro-magnetic/dp/1775394514/ref=sr_1_1?dchild=1&keywords=hidden+dangers&qid=1634591185&sr=8-1

Here's just a few items of interest from his Hidden Dangers book:

2007-Spain-1 tower = 30 cases of cancer.

2009-Spain-1 tower = 43 cases of cancer.

2011-Brazil- Over 7000 cancer deaths in 10 years; 80% lived w/in 1/3 mile of tower.

2011-Italy-Supreme Court orders Vatican Radio to pay 41 people w/in 6 miles of transmitter who died of leukemia.

2004 - Int'l Assoc of Firefighters takes an official position...says "NO towers/antennas for the conduction of cell phone transmission until a study with the highest scientific merit and integrity on health effects of exposure to low-intensity RF/MW radiation is conducted and it is proven that such siting's are not hazardous...".

2000-Germany says, "Cell towers need to reduce radiation by 10,000 times".

2018-Italy-Ramzinni Study-Largest animal study confirms cell towers cause cancer.

Now that I'm 6 years into this story I can declare adamantly that every living thing is being adversely affected and there are tons of studies to support this claim as you'll soon see. It's just that nobody realizes the common denominator, and most don't want to acknowledge that it may be true because of the vast implications. The television sells ads to the providers of the toxin so they aren't going to tell us UNTIL they are forced to, if at all. Many people's entire livelihoods now are linked to this technology, so they aren't willing to see what they need to see. It's also known to have been created to be highly addictive, so I feel like I'm trying to take crack away from a misinformed, entitled citizenry under mass delusion by a godless, greedy, corrupted culture of bureaucrats and executives. A form of mass psychosis induced by electrical sources is what this is. It's so important that I'm making yet another effort to wake some people up but beyond this booklet, YOU, THE PEOPLE need to get into action.

Rudolph Steiner, 1924, "This life of men in the midst of electricity, notably radiant electricity, will presently affect them in such a way that they will no longer be able to understand the news which they receive so rapidly. The effect is to damp down their intelligence. Such effects are already to be seen today. Even today, you can notice how people understand the things that come to them with far greater difficulty than they did a few decades ago."

**“The first mile above the Earth is now filled with
2 million times the EMF as we faced in 1990.”**

Dr. Jack Kruse

In the last two years (2020-2022) I’ve watched as many more people are becoming sick especially from their “new” phones. On YouTube.com you’ll find a video titled, ["Phonagate" 1 min video here](#), you’ll see that these cell phones are producing three to four times the amount of radiation reported by the manufacturers and that’s info from 2017. As each new phone has come out, they’re becoming stronger and more toxic. Many contacts report they were fine “until I had to upgrade my phone”, as with my own story.

We’re literally pouring new technology into our world in many forms and many layers in a way that has NEVER been done before!

The next image is a look at our military radar installations which represents a literal blanket of electromagnetic radiation, and we’d still need to add civilian airport and weather radar stations as well!

Dancing Aphids - Radar Excitation - John Ott - www.naturalenergyworks.net

<https://www.youtube.com/watch?v=018C2oG2Rcs>

In the book *Hidden Dangers – How governments, telecom and electric power utilities suppress the truth about the known hazards of electro-magnetic field (EMF) radiation*, the author, a retired electronic warfare specialist wrote, “The U. S. Military is and always has been paranoid about remaining the world’s only superpower, and depends heavily on ‘Industry’ (i.e., electric/communications/electronics) to ensure that it always has state-of-the-art technology in it’ weapons and communications systems. Since 1953, its stance has been that there are thermal effects ONLY to microwave radiation, i.e., RF/EMR. Since 1966, western militaries, namely those of the U. S., U.K., Canada, Australia, and New Zealand, have recognized ONLY the thermal effects, implying that there are no thermal effects – which is incorrect. In return, Industry is given a green light to freely exploit the full potential of extremely lucrative wireless RF products, all of which emit hazardous ‘pulsed’ non-thermal RF EMR.”

These images came from Wigle.Net showing network coverage. They were provided by instructors in a recent BETA class I took on "ElectroPollution".

This image current as of 7/29/22

Note the information just above the 2nd picture showing the number of cell towers, WIFI networks, devices and other unknowns.

18 million cell towers,

920 million Wifi networks,

over 1 billion BT devices,

13 billion Wifi Observations

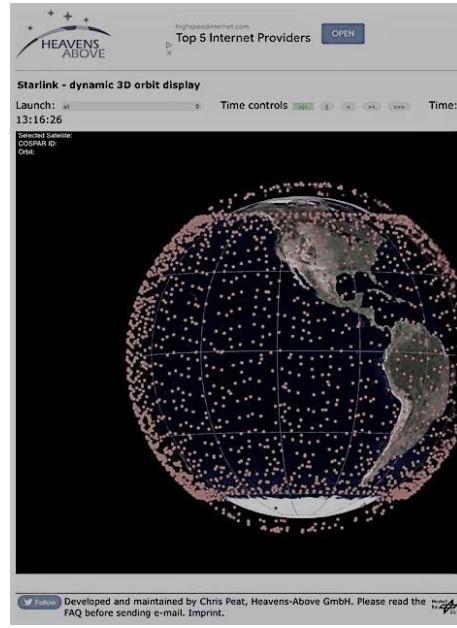

“Space Junk and Invisible Radiation”.

I wonder how it looks now, 7 years later after a huge rollout of 5G antennas and Elon Musk’s satellites of recent years.

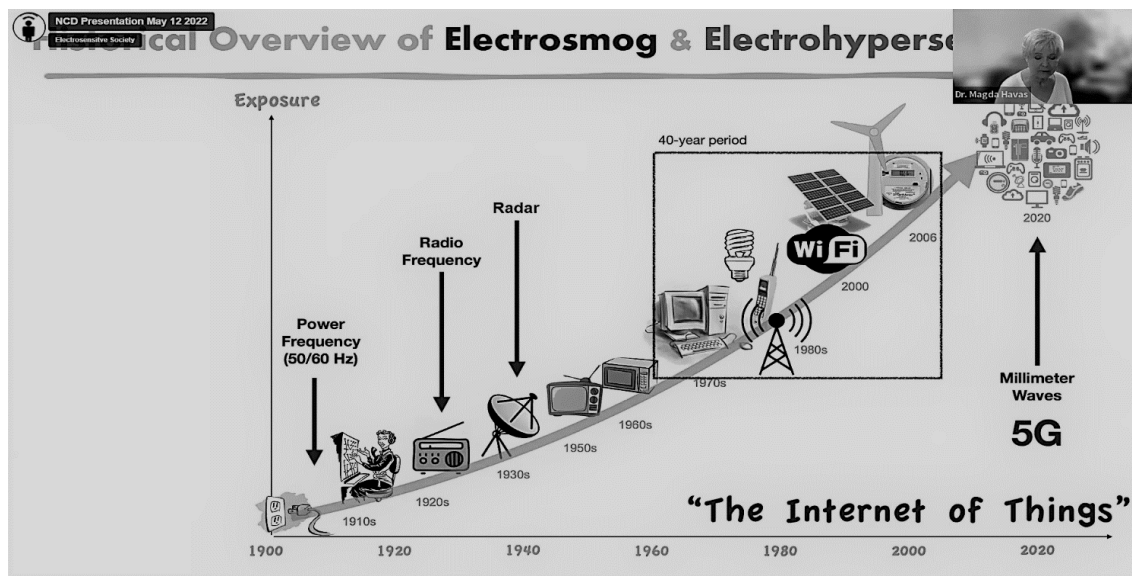

As for the question of how many satellites in Low Earth Orbit, I’ve seen counts all over the map. One source reported 4952 and another source says 7500. “In total, there were around 7,500 satellites in LEO as of September 2021, according to the United Nations' [Outer Space Objects Index](https://www.unoosa.org/oosa/en/ourworkandactivities/workingwiththeinternationalregistryofspaceobjects/index.html).” The following link will answer many of your questions: <https://www.livescience.com/how-many-satellites-orbit-earth>

Note: If the image below looks like fast internet downloads, you need to think again. Instead, think of facial recognition, social credit score, total tyrannical control of every inch of the Earth. Did you vote for this? No? Actually, we do it every day that we continue to buy, use, and accept this technology overreach!

“Elon Musk is hoping to send 42,000 of these satellites to space, 15 times the number of operational satellites in orbit today. It’s part of Starlink, the expansive constellation from Musk and SpaceX that hopes to bring the world low-latency high-speed internet, promising no more buffering and nearly instantaneous internet in every corner of the world. But experts worry it may come at a hefty cost for space exploration.” Here’s the link: <https://www.businessinsider.com/how-elon-musk-42000-starlink-satellites-earth-effects-stars-2020-10> According to this site, big tech has received approval for 100,000 satellites! 3 min video: <https://safetechinternational.org/microwaving-our-planet/>

It's gone too far! Meter readings, human reports, wildlife studies say, “it’s gone TOO FAR”!

“...it was not uncommon to be met with the sometime scathing suggestion to go live in the Amazonian wilderness, as that seemed the only place left for us. Sadly, this assumption proved to be false. The Amazon

is actually now one of the most EMF contaminated places on Earth...in the form of ‘twenty-five enormously powerful surveillance radars, ten Doppler weather radars, two hundred floating water-monitoring stations, nine hundred radio equipped ‘listening posts’, thirty-two radio stations, eight air-borne state-of-the-art surveillance jets equipped with fog-penetrating radar, and ninety-nine ‘attack/trainer’ support aircraft, [all of] which can track individual human beings and ‘hear a twig snap’ anywhere in the Amazon.” WIFI REFUGEE: PLIGHT OF THE MODERN DAY CANARY by Shannon Rowan (pg 225)

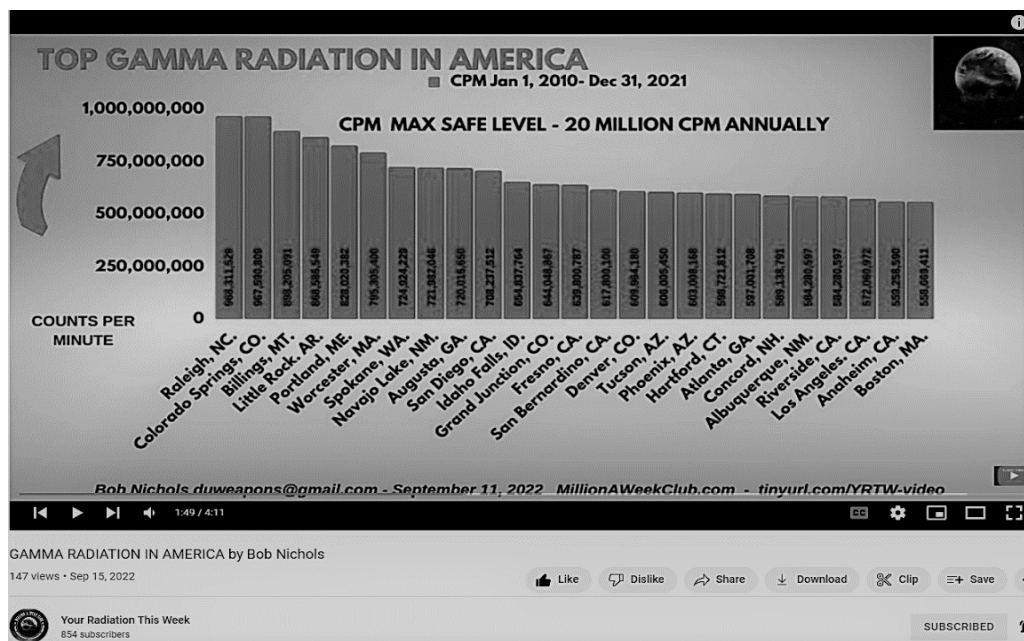

I don’t like to leave bad news laying on the table if I can present choices and options for solutions so let me share this first: I heard the creator of the Dilbert cartoon, Scott Adams, in a recent interview reporting that we now have the technology to build a facility next to leaking nuclear plants/storage locations that can solve these problems. He said the new technology will absorb and neutralize any radiation and shut the old plant down when it’s finished. I can’t imagine him giving such a factual statement if it wasn’t true, so we need to be headed full speed in this direction. Others believe microbes can clean up radiation. I do know that we can’t fix what we won’t face. And the same goons that got us into this mess do not possess the skills or intellect to change the course we’re on.

When I first created this document another Facebook “friend” began prompting me to look into our gamma/nuclear situation here in the USA. I was appalled at what I found but reluctantly included it, but then I became concerned that people would be neutralized by fear if I left it, so I took it out. Remember how I said, “information I need seems to come to me”? Well, after I heard Scott Adams comment above as I was merely walking through the room, I felt hope, so I put it back visible on the site. Here’s that information:

<https://neighborsorganizingagainsttrespassingtechnology.blog/2018/09/07/confession-the-part-i-took-out-of-the-document/>

This link is for a YouTube.com channel belonging to Bob Nichols who gives very short videos showing our annual gamma radiation readings across the United States. Little Rock, Arkansas is #4! He has lots of 1-to-5-minute videos here: https://www.youtube.com/playlist?list=PLtHwI9inYdan_CBbzeM4czKs8gQukZELv

Here’s his website: <https://yourradiationthisweek.org/> and the screenshot below is from his most recent YouTube video September 15, 2022:

You can view a graphic at <https://www.facebook.com/Mid-America-Land-Restoration-Microbes-Probiotics-227068760671186>, that shows the gamma/nuclear radiation readings for Little Rock, Arkansas

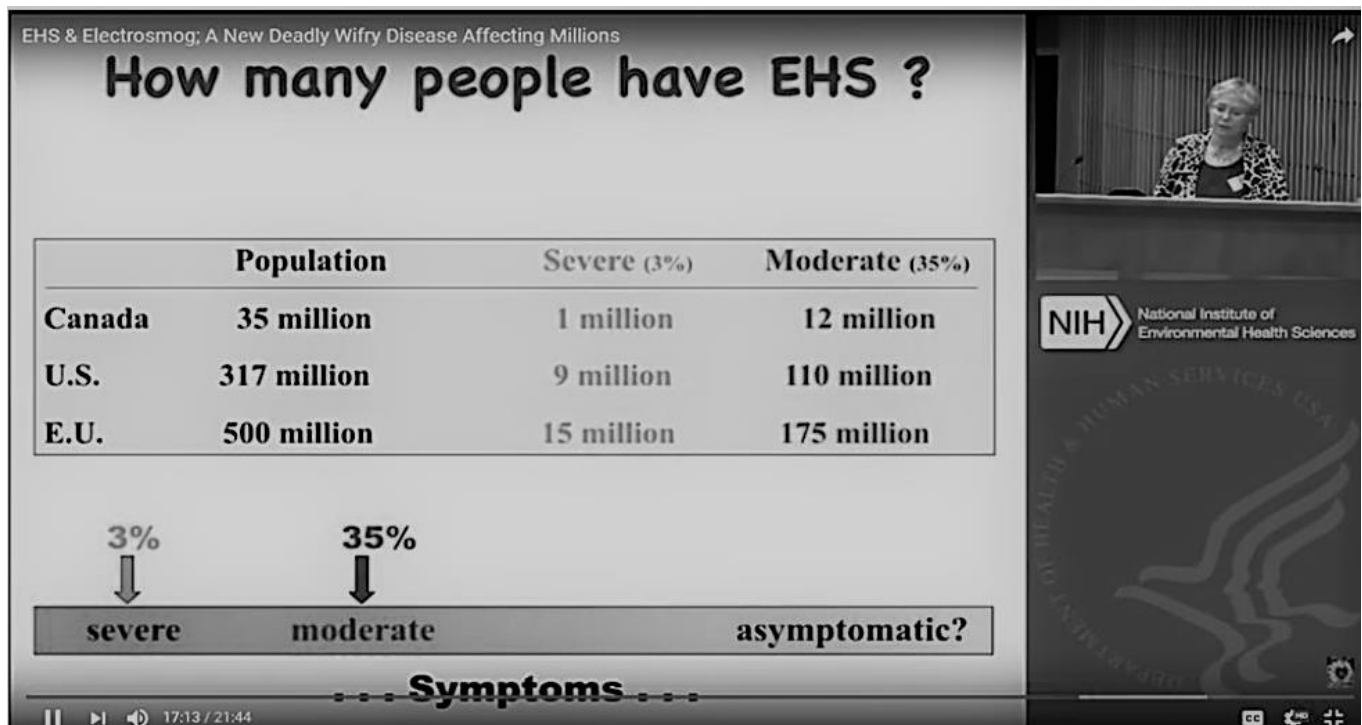

Sept 7th, 2019 – Jan 4th, 2020. A hazmat evacuation event used to be 300 CPM's (counts per minute). The graph shows a reading of 7500 CPMs with periodic spikes up to 10,000 CPM's!

So, how many people are being adversely affected by this level of unchecked insanity?

An NIH.gov article by the National Library of Medicine titled, *Electrohypersensitivity as a Newly Identified and Characterized Neurologic Pathological Disorder: How to Diagnose, Treat, and Prevent It*, states, "Prevalence of EHS occurrence is estimated to range from 0.7% to 13.3%, **mainly affecting about 3% to 5% of the population in many countries**, meaning that millions of people may in fact be affected by EHS worldwide... the increase in EHS prevalence is not restricted to a single country but **is presently a worldwide plague**, which started as soon as these industrial technologies became widespread." [Click here to view](#)

Researchers Hallberg and Oberfield studying the growth rates of electrohypersensitivity cases, **predicted that by 2017, 50% of the population will display such symptoms**. Yes, but they won't know what's causing them for another decade after people like me keep forcing the subject into the mainstream. They'll run to the doctor, get a Rx pill and return to their unhealthy electrical environment. Here's one woman's story. <https://neighborsorganizingagainsttrespassingtechnology.blog/2020/12/04/i-am-an-emf-refugee/>

The image below is from a YouTube video on the subject. That's Magda Havas, PhD, at the podium, a heavy contributor to environmental issues. This video is no longer available but her screenshot here is still valid that 119 million in the USA are being harmed. This information is further supported at this link: <https://www.activistpost.com/2019/06/who-estimates-high-levels-of-emfs-in-1st-world-countries-could-lead-to-health-issues-in-30-of-population-new-watch-made-to-fight-harmful-effects.html>

Look over this symptom list:

Symptoms of Microwave Illness

<https://www.microwavedvets.com>

Headaches	Difficulty Concentrating	Tinnitus
Dizziness	Memory Loss	Hearing Loss
Nausea	Brain Damage	Irregular Sleep Pattern
Skin Rash	Mood Disorder	Insomnia
Itchy Skin	Personality Disorder	Chronic Fatigue
Burning Skin Sensation	Increased Irritability	Deteriorating Vision
Tingling Sensation	Decreasing Trust in People	Pressure in/behind eyes
Tremors	Depression	Eye Damage
Muscle Spasms	Anxiety	Cataracts
Muscle and Joint Pain	ADHD/ADD	Immune Abnormalities
Restless Leg Syndrome	Digestive Issues	Altered Sugar Metabolism
Foot Issues	Abdominal Pain	Asthma Attacks
Low/High Pressure	Enlarged Thyroid	Bronchitis
Facial Flushing	Hair Loss	Pneumonia
Dehydration	Testicular/Ovarian Pain Low	Inflamed Sinuses
Body Metals Redistribution	Sperm Motility	Chest Pain/Pressure
Leukemia	Miscarriage	Heart Arrhythmia
Lymphoma	Electromagnetic Sensitivity	Heart Palpitations

As well, the World Health Organization has assigned an “ICD Code” International Code for Diagnostics for this condition, which is an undeniable detail that acknowledges harm is in fact possible? If there’s an insurance billing code for a condition, then it does exist and clearly, from the stats above, it’s not “rare”.

Electromagnetic Hypersensitivity (EHS) and World Health Organization (WHO)

PART 1: International Classification of Disease and Functioning

- A. International Classification of Diseases (ICD-10)
- B. International Classification of Functioning, Disability and Health (ICF)

A. International Classification of Diseases (ICD-10):

Classification of electromagnetic hypersensitivity (EHS) requires two or more codes.

(The WHO does not use the term “Electromagnetic Hypersensitivity.” Rather they call it, “idiopathic environmental intolerance (IEI) attributed to electromagnetic fields (EMF).”

EHS or IEI should be classified under:

(1) Cause – Two codes are available for illness/injury resulting from exposure:

- W90.0 for exposure to radiofrequency radiation (RFR). Note this includes intermediate frequencies (IF) that flow along wires, microwave radiation (MWR) as well as millimeter waves (mmW).
- W90.8 for exposure to other non-ionizing radiation, for example extremely low frequency (ELF) electric and magnetic fields (EMF) and ground current. <http://apps.who.int/classifications/icd10/browse/2010/en#/W90>

(2) Effects – various classifications are available for the illnesses/injuries caused by the exposure to EMF radiation, for example ...

- ICD-10 G43 for migraine: <http://apps.who.int/classifications/icd10/browse/2010/en#/G43>

- ICD-10 R42 for dizziness and giddiness: <http://apps.who.int/classifications/icd10/browse/2010/en#/R42>
- ICD-10 H93.1 for tinnitus: <http://apps.who.int/classifications/icd10/browse/2010/en#/H93.1>

B. International Classification of Functioning, Disability and Health (ICF):

ICF Checklist – Version 2.1a, Clinician Form for disability benefits, ill-health pensions etc.
<https://icd.who.int/browse10/2010/en#/H93.1>

You must state your disability in the presence of EMF radiation, e.g.:

- “my vision is so badly affected that it would be unsafe for me to take charge of a group of 8-year old's while on a school trip in a busy city”,
- “my thoughts become so jammed in the presence of EMF Wi-Fi in the hospital that it would be unsafe for me to administer drugs to my patients in hospital”

Based on information provided by ESUK 2

Further details:

PART 2: Activity Limitations & Participation Restrictions

- Activity is the execution of a task or action by an individual. Participation is involvement in a life situation.
- Activity limitations are difficulties an individual may have in executing activities.
- Participation restrictions are problems an individual may have in involvement in life situations.
- The Performance qualifier indicates the extent of Participation restriction by describing the person's actual performance of a task or action in his or her current environment. Because the current environment brings in the societal context, performance can also be understood as "involvement in a life situation" or "the lived experience" of people in the actual context in which they live. This context includes the environmental factors – all aspects of the physical, social and attitudinal world that can be coded using the Environmental.
- The Performance qualifier measures the difficulty the respondent experiences in doing things, assuming that they want to do them.
- The Capacity qualifier indicates the extent of Activity limitation by describing the person's ability to execute a task or an action. The Capacity qualifier focuses on limitations that are inherent or intrinsic features of the person themselves. These limitations should be direct manifestations of the respondent's health state, without the assistance. By assistance we mean the help of another person, or assistance provided by an adapted or specially designed tool or vehicle, or any form of environmental modification to a room, home, workplace etc. The level of capacity should be judged relative to that normally expected of the person, or the person's capacity before they acquired their health condition.

PART 3: Environmental Factors

- Environmental factors make up the physical, social and attitudinal environment in which people live and conduct their lives.
- Qualifier in environment, Barriers or facilitator: 0 No barriers 0 No facilitator 1 Mild barriers +1 Mild facilitator 2 Moderate barriers +2 Moderate facilitator 3 Severe barriers +3 Substantial facilitator 4 Complete barriers +4 Complete facilitator

Prepared by Max Chua on Facebook's Electromagnetic Hypersensitivity (EHS) Support Group

The odds of your doctor associating any symptoms to EMF's is slim to none as it's just not recognized yet. You'll be given a Rx drug and sent back to your toxic world because they still think of radiation as a therapeutic tool. For example, when I first met Kendall on facebook, she was running back and forth to the doctor complaining of Afib (irregular heartbeat). I kept telling her to "go see what kind of electric meter is on your house." She'd read the book I published but my tech injury came after the first printing of the book. When they were suddenly burned out in the California Camp Fire of 2018 they were forced into a friend's RV for several months and sure enough, her Afib completely went away! Apparently, she didn't need that \$800 a month Rx medicine after all. Now can you see how this "machine" can be redistributing your wealth through stealth measures?

There are many neurological disorders and diseases like dementia and Alzheimer's showing up even in children now. I'm seeing lots of complaints of Afib (irregular heart rhythms). Clots in lungs as well, may be from phones or utility meters. Stomach and gut issues seem to be the latest trend I'm seeing with new phones specifically but also a "bank" of electric meters on the bedroom wall of someone's apartment is the suspect. Recently, after Kendall got past the electric meter issue and survived adrenal cancer she again appeared to be actively dying, getting worse every day. They had hardwired their computer and had their electric meter changed to a true analog meter so her new cell phone was the likely culprit. She was complaining that her stomach felt "bad, like I'm getting cancer or something". Every day she was deteriorating. I challenged her to turn off her cell phone and not allow any cell phones in her home or in the car for at least 3 days, (not even in airplane mode which in newer phones leaves some emitters functioning). Forty-eight hours later, her health did a complete turnaround! She had her husband change all her alerts to her email and has never touched it again and she's better every day. She said this all began shortly after they were forced into upgrading their phones. She recently gave an account of having 3 mini-strokes, 2 heart ablations, constant Afib (heart out of rhythm), general ill feeling, shaking, anxiety, brain issues (memory, spaciness, easily distracted), Central Nervous System issues, and later had an adrenal gland removed that was cancerous, which according to the \$25 Million government study is one of the things that can happen from exposure to cell phones specifically. She shared that all of her misery began eight years earlier while working in a business that had WIFI. I'm watching another beautiful 21-year-old young lady posting pictures of herself and they've just cut a few feet of her intestines out and she's wearing an ileostomy bag, yet there she is holding that stupid phone which is likely responsible for her having gut surgery in the first place.

When I shared Kendall's cell phone story with a local friend, she realized her stomach hurts if she's on her phone more than 3-4 minutes. She then told her 8 yr old granddaughter who said, "I bet that's why my stomach hurts when I play games on my iPad and maybe that's what's wrong with Mom's stomach and she's on her phone all the time." She also realized that one month after the utility company installed an electronic utility meter, she had a fully ruptured appendix and six months later she had a heart attack.

We have to recognize that what's being done in the name of progress, HAS NEVER BEEN DONE BEFORE. **There are no ancient cell towers with microwave drums on them.** As shown in the images,

there's a literal blanket of military radar, which is electromagnetic radiation. Add to this the new-fangled electronic meters that are creating a "grid" aka a "field of current" that every living thing is now in constantly. Then there's everyone carrying around a transmitter/receiver they think of as their "phone." Then there's the WIFI and Broadband to be sprayed even into our rural world...an ungodly number of satellites being launched and more planned. Blatantly ionized skies...and we haven't included the gamma radiation spewing out from Fukushima and other estimated 75% of leaking nuclear plants. And when the corruption has been blatantly charted for us as you'll soon see, the only question is whether we will continue to allow what I'm about to reveal.

It's not just wireless that's the problem

After my initial injury we bought some meters so we could trace and mitigate wireless issues, which led us into insights about wired issues as well. What was a concerning realization is to have the STATE LICENSED ELECTRICIANS we interviewed tell me, **"Ma'am, if you didn't have meters to prove what you're saying we would've thought you were crazy."** So, essentially these "trained and licensed by the state professionals" had no clue that their work, done wrong, (according to personal preferences and code-violating methods handed down by mentors), can make people sick? **They weren't familiar with the meters that measure the SAFETY of their work. That is crazy!**

They found a few original light fixtures in my mom's 41-year-old house where the insulation was oxidized, cracked, and left a bare wire touching the metal fixture, and yet nothing tripped. My brother noted that the electrician who did the most recent work installing a new panel seemed like he was "on something" but he didn't think to mention it. Maybe they should be passing a drug test to keep their license. The electricians never did find where the house was grounded. It was purchased AND inspected in 1988, built in 1976. Checking for a healthy ground should be on that list of things to be inspected. The night the electricians installed two 8' copper clad grounding rods and a number 4 wire from the electric panel, I slept for 5 hours straight for the first time in several years, maybe since moving into that house with my widowed mother in August of 2012. Who knew that interrupted or inability to sleep could be a home wiring or electrical issue in the environment or from the type of electric meter on your home? Anybody? Your doctor?

We found that the sprinkler system on the outside wall of the fireplace was throwing a dangerous electric field half across our living room where we spend several hours of our evening. There was another dangerous reading running along an entire wall, so we had to open the sheetrock and found a common problem; a staple slammed into the Romex at an angle by a high-powered stapler. I'd learned that even if the insulation isn't broken the wire can sustain an injury and throw a field off into the home and did! Then the Romex was pulled at a 90-degree angle **tightly**, another no-no that can result in a crimp in the small wires and throw off a toxic field and did. There was a screw in a 220 cord behind the stove that a contractor had done and that too can throw out a very toxic field and did. Add this to the appliances running, LED lights shining directly on granite counter tops, which store and transmit energy, and you might understand why being in the kitchen felt like I was being subtly electrocuted! This could easily have led to a wrong medical diagnosis, a wrong treatment, my early demise, and a remaining toxin pouring into the home. Just like carbon monoxide you can't see it, taste it, or smell it but it will create disease and even kill you. I think it's time for an EMF inspection to happen at homes prior to occupancy and perhaps at sale. Certainly, public education needs to happen.

As we continued to unravel, eliminate, and remedy the mass amounts of electrical chaos going on around us and having to train the electricians, while learning ourselves, I kept wondering why nobody in our culture encourages the maintenance and health of our electrical environment and the understanding that it can and

does affect our health? Are we really that ignorant? Sadly, the answer is “Yes” and I was about to get a further education and become burdened with the task of waking up humanity.

THEN, IT GOT REALLY WEIRD AND IT WASN'T JUST ME, THE ‘SENSITIVE’ ONE BEING AFFECTED! We are Energetic Beings!

June 9th, 2018, while standing in my back yard, I had a very abnormal experience. It felt like my eyes were going to cross but then the sense became that they were attempting to line up vertically lasting for about 5 seconds. I recall everything turning white but muscularly speaking *it seemed* that my right eye was vertically above my left eye. I got a little woozy but recovered within a few seconds after it stopped. I wasn't sure what to think about it but considered that I was wearing rubber flip flops, so I wasn't grounded to the Earth, was now hypersensitive, and standing .27 miles from a large cell tower. Not being grounded to the Earth meant that any wave form in the area would see me as an upright water filled antenna. I wondered if it was a new symptom of me being “electrohypersensitive” but felt we were doing everything we could do so I went on with my day knowing that most answers usually find their way to me and sure enough...

June 11th, 2018 (2 days later) a similar thing happened to my then 82-yr-old Mom while she was standing in the doorway of my bedroom. **She did not know it had happened to me and she is NOT electro hypersensitive!!!** Somewhat differently, she described that both of her eyes seemed to go in opposite directions side to side and hers lasted for 5-10 seconds. I can't help but wonder what might have occurred if this had happened while she was driving her LARGE motorhome? Likely it would've been blamed on her age and her driving privileges taken while the larger issue was ignored! BUT WAIT...

THEN, I met an electrical engineer in the local grocery store a few months later that seemed like an appointment with Destiny. He followed me out and bought a book from me and gave me his card. I called him about six weeks later and we talked for two hours, and he told me that he too had this vertically aligned eye event **but his lasted for several minutes and there were witnesses.** He described several friends at an apartment working on their computers together for a project. At the end of our phone conversation his voice began to quiver, and he said “I say with all humility that I am often the smartest guy in the room. I wish that what you are saying weren't true because it means that we missed something very important in our deployment of these things.” He then cried and said, “But I know it is true and frankly, I'm scared.” My reply, “You should be scared. Very scared!”

I went to NextDoor.com via Mom's account, and sure enough, there's a post there ON **JUNE 9TH**, 2018 that showed the new traffic light at Hudson Loop is now activated “be careful, heads up” kind of post.

I found the following article that begins with “Migratory birds are known to use the geomagnetic field as a source of compass information. **Scientists have shown that oscillating magnetic fields disrupt the orientation behavior of migratory birds.** Researchers found that robins were disoriented when exposed to a **vertically aligned**, broadband or a single-frequency field.” THAT would explain the sense I had that my eyes were aligned vertically! It continues with a quote ‘According to Alasdair Philips of Powerwatch.org, medium- and short-wave frequencies have been used since the 1930s with little evidence of any effect on bird behavior. **But since the mobile phone networks went up there have been increasing reports of birds, especially homing pigeons, getting lost.** Research now needs to look at the effects of base station signals, *particularly in view of the disorientating effects of EMR ‘noise’ reported in this study.*...Your body is also dependent on appropriate chemical reactions, many of which are guided by electrical frequencies in your brain, some of which happen to oscillate at the same frequency as that of cell

phones and wireless networks.” The original link with that quote is no longer active but you’ll find several links to this information in the middle column of the following site addressing harm to birds and wildlife in general: <https://nomoretowersintheozarks.org/> aka TheTruthAboutTechnology.org

Some quick research revealed that birds have magnetite crystals that help guide them. Several sources acknowledge that we humans also have magnetite crystals in our eyes and our brain, so it doesn’t take a high school graduate to see what happened here. A man made or “non-native” wave form passed through our body and the magnetite crystals (iron + oxygen) caused our eyes to line up with the signal as it passed through us.

June 13th, 2018, I ended up being stopped by that new traffic light at Hudson Loop and Hwy 290 West for the first time. Now mind you I was sitting about 150-200 yards from two new apartment complexes that are outfitted with hundreds of these new digital electric meters, likely of the wireless design. I’d read from a few sites on the internet about how these meters are pumping out pulsed microwave radiation, 24/7 and that they all produce a horrid amount of dirty electrical current that rides on the 60 Hz sine wave that brings electricity into our homes and radiates out into the rooms. We had a 13-year-old version of this technology on the home in Austin, but we had it changed out to an old-style, mechanical only, “analog” meter like most of us grew up with. We had to pay \$75 to change it and an extra \$30/month to have someone come read the meter. This practice has been ruled as prejudiced against the disabled to charge fees to have equipment that doesn’t make us sick, but nobody wants to admit it’s making people sick. We can deal with that later; right now, I’m just trying to survive the plight and get the word out to others so we can change the course we’re on. After we had it changed out, I could tell that my body felt less burdened and again slept deeply for two nights but after a few days it seemed my progress stopped again, and I realized that it wasn’t going to get any better from this change but at least it was one more source tamed. I also realized our neighbor’s meter is about 20 yards from where I spent the bulk of my time in the home, including my bedroom and the office. In a typical subdivision every neighbor has one of these on their homes so there’s no escaping it, unless I educate my neighbors and convince them to switch out their meter too. I could only hope to reduce the dosage where I had options to do so.

As I began to learn more about what’s around me, I began to understand we’re being saturated in this stuff but at the moment I was sitting at that traffic light I had no idea that I should be concerned as the extent of my knowledge was more experiential. As things happened to me, I’d go looking for the academic side of the story and because I’d been driving in front of those apartments for a year now without issue, I had no idea what was about to happen **THIS TIME** when I was stopped at the light and couldn’t move. I was horrified as I felt my body being saturated with toxic energy. Remember radiation effects accumulate in the body. So, touching the screen of Mom’s phone at a point when my body was already saturated threw me into an acute situation that tilted the scale. By the time I got home, a mile away, I was wanting to leap out of my own body. I got my bare feet on the grass quickly to pick up free electrons to calm the biological storm. Yes, we’ve also forgotten to implement good “grounding” practices as we’ve electrified our world. (Read the book *Earthing* by Clint Ober, (second edition) backed up by a cardiologist, Dr. Sinatra, whose son developed severe Electrohypersensitivity aka EHS.)

https://www.amazon.com/Earthing-Most-Important-Health-Discovery/dp/1591203740/ref=sr_1_1?crid=1VHGF0PX6YCPR&keywords=earthing+by+clinton+ober&qid=1661377958&s_prefix=Earthing+by+Clint%2Caps%2C304&sr=8-1

Over the next few days my sensitivity amped up to what I estimate is triple what it had been from that single exposure event. However, it was this event that drew our attention to some new technology (a white rectangle plate) plugged into the metal arm that traffic light is mounted on. I have no idea what it is but there are now two of these at the next intersection of Scenic Brook, west of there, and **SEVEN** of them at the next intersection of Circle Drive and Hwy 290 West, and a 4’ antenna of some sort too. What is this,

how many is too many, and what all is it affecting that we don't know about? Is it broadband that makes the eyes cross or float?

“You aren't ‘sensitive’ to wireless. You're being subtly electrocuted.”

Curtis Bennett of Thermoguy.com

I went to AntennaSearch.com and learned that **we had 23 cell towers and 112 antennas** in a 4-mile radius of our home, though I only see a few. (Be aware. In tiny print on this site, they have now reduced this to a 2-mile radius so the numbers may be different, and it may change again). I thought that was a lot until I reconnected with a friend, I'd lost touch with after I became ill. She too is now sick, and we both used to be in abundant health. I looked up her address and there are **443 cell towers and 339 antennas** around her in a 4-mile radius! They chose her home to put a data collection meter on aka “Medusa” and all that implies. It collects data from up to 17 homes and sends them to this meter they'd installed on her bedroom wall with high levels of radiation coming out the back of it.

Last time I investigated it, most of these new utility meters aren't even approved by Underwriter's Laboratory. Your toaster and hair dryer has a UL code of approval but not these and they plug into our power source? (I think that information came through a comment/article from Take Back Your Power documentary.) When they came through and installed those “Smart Meters” in her neighborhood built in the 60's, they blew four transformers in four months! Like many of us, she's being driven out of a home she's lived in for 32 years because of an invasion of technology that's destroying her health!

I've also enclosed a few posts by people about how this is affecting their pets, and how seeds don't sprout in the presence of a Wi-Fi router for those who suggest this is psychological. Check out these screenshots that teach: <https://nomoretowersintheozarks.org/images-that-teach>

WIFI Concerns

I know several women who've been made homeless from this tech launch. Many people are fleeing to a “radio quiet zone” in West Virginia as most houses or apartments they try to rent are too toxic. There's a large radio antenna there that forbids/limits outside technology. When I inquired about renting a room, the woman said the hardest part of being there is the pervasive sadness from people who've been driven out of their lives and mocked for warning others. She's right. **This task isn't for sissies, but I have faith in you that once you see...YOU'LL RISE!** You can see a 1-hour documentary titled, Wifi Refugees on YouTube.com, for free, and hear some of their stories: <https://www.youtube.com/watch?v=TzUKQ68coRE>

I spoke with a man who lives in a metal shed behind his home in Mission, TX. He's been “sensitive” for 20 years; homebound for 10 years now and his three children now have electrohypersensitivity! And instead of creating a safe place for these children, we've brought Wi-Fi into the schools. **Did you know that Sweden has hard-wired their schools after they noted dropping grades and irritable attitudes?** Go to YouTube and search for some videos by Barrie Trower who retired from The Royal Navy as a microwave weapons expert. He says, **“Anyone who puts Wi-Fi in schools should be hung.”** What do we do in the USA, put Wi-Fi in EVERY school and defend it even if the kids and staff start passing out, having nose bleeds, and then we prevent incident reports!

Here's an article that should help substantiate the concerns; a link with 150+ letters from doctors, universities, medical institutions, and more addressing the alarming issues of electromagnetic radiation especially in the form of Wi-Fi at schools. I printed, read, and underlined them. The last letter has **330+ references to substantiate their concerns**. Search it by title as “Doctor Letters on Wi-Fi in School Full

You can watch a video from **2013** at the next link, on YouTube where **FOUR CHILDREN DIED after a powerful WIFI router was installed in a school** (in Canada) **that could run 300 computers.** “The school was so proud.” **Four children dropped dead of cardiac arrest; two were revived and now wear pacemakers.** Two of them were 10 years old, one was a 13 yr. old, one was a 16 yr. old. The speaker listed many more children made ill. One 13-year-old developed pancreatitis which the doctor said they’ve never seen in a person this age. [Click here to watch this video](#) or you can search it by title on YouTube as: Rodney Palmer – Safety Code 6 – Presentation to the Royal Society of Canada. I strongly suggest you go watch this 18-minute video.

I then found a guy on Twitter named, Concrete Prophet, who posted four articles in a row about schools with high levels of radiation. I print and save these important links because they often disappear. When I tell you there is an active force attempting to conceal this information, believe it. (Sure enough, for the second time, the articles below have been wiped from the web. I uploaded the .pdf versions to the NoATT.blog.) [Click here to go to: https://neighborsorganizingagainstittrespassingtechnology.blog/2019/12/07/high-radiation-levels-in-schools-needs-your-attention-asap/](https://neighborsorganizingagainstittrespassingtechnology.blog/2019/12/07/high-radiation-levels-in-schools-needs-your-attention-asap/)

The next article cited here details radiation and dirty electricity levels at several schools in Maryland and has some great info and graphics for your review. [Click here to read: https://zero5g.com/2019/high-levels-of-wireless-radiation-at-arundel-high-school/](https://zero5g.com/2019/high-levels-of-wireless-radiation-at-arundel-high-school/)

“...analysis of the teacher population showed a positive trend...of increasing cancer risk with increasing cumulative exposure to high frequency voltage transients on the classroom's electrical wiring measured with a Graham/Stetzer (G/S) meter. The attributable risk of cancer associated with this exposure was 64%. A single year of employment at this school increased a teacher's cancer risk by 21%.” [Emphasis Mine] Again, this form of radiation is the “dirty electricity” measured in the electric outlets. [Click here to read about LaQuinta Middle School in California: https://www.ncbi.nlm.nih.gov/pubmed/18512243](https://www.ncbi.nlm.nih.gov/pubmed/18512243) FYI, “voltage transients on the classroom’s electrical wiring” is simply referred to as “DIRTY ELECTRICITY” and is the COMMON RESULT of using electronic utility meters. It’s measurable in your electric outlets with a \$150 meter. If you can’t afford it, split the cost with family, neighbors, or friends but KNOW what’s coming from your outlets. <https://neighborsorganizingagainstittrespassingtechnology.blog/2020/12/05/dirty-electricity-meters-filters/>.

Another article of great interest is titled “**Germany warns citizens to avoid using Wi-Fi**” from SEPTEMBER 9, **2007!** <https://www.independent.co.uk/climate-change/news/germany-warns-citizens-to-avoid-using-wifi-5329224.html> What do we do in the US? We’re installing it in schools, nursing homes, memory care centers, even the public library and courthouse are spraying it out into the Ozarks. Perhaps that explains this next issue of **suicide AMONG 9- AND 10-YEAR OLDS.** ☹ When I read that headline, I remembered the Sam Milham quote from his book, Dirty Electricity, where **suicide was listed as a side effect of an unhealthy electrical environment.** Here’s another article just posted about **suicide rates doubling in children** 5 to 18 years old between 2007-2015. “...suicidal ideation or suicide attempts each year...Diagnoses of either condition increased from 580,000 in 2007 to 1.12 million in 2015, according to the study, published Monday in JAMA Pediatrics. You can read that article here: <https://www.wisn.com/article/study-number-of-children-going-to-er-with-suicidal-thoughts-and-attempts-has-doubled/27083607?fbclid=IwAR1EHkCXcFIoR-L3BmczbUWmgbaGTyAHa1ynMMwyrTti2CQ9rm5V0Lrg8E>

Here’s the story of a “schoolgirl” found hanged after suffering from allergy to WIFI, corrected at home but not accommodated at school. Her mom said: “Jenny left letters for us where she said she couldn’t cope with her allergies from WiFi anymore...She left them for us in case things went too far but I don’t believe she wanted to die.” A teacher for the school defends that the school does have WiFi installed to enable us

to operate effectively. The governors are content that the installed equipment complies with the relevant regulations.” I can’t emphasize the number of insane comments like that I’ve read by school officials and bureaucrats as if “efficiency” is THE PRIORITY and killing students is allowed as long as the administration of said institution is at peak efficiency. As for those safety regulations, I think we’ve seen that those are hugely outdated here in the US and I expect the oversight agencies in the UK are also corrupted. <https://neighborsorganizingagainstrepassingtechnology.blog/2020/12/05/schoolgirl-jenny-fry-found-hanged-after-suffering-from-allergy-to-wifi/>

At this link parents question if WIFI killed their son and their dog:

<https://neighborsorganizingagainstrepassingtechnology.blog/2020/12/05/did-wireless-radiation-kill-our-son-and-our-dog/>

Here’s a 30 min video, “Wi-Fried” that got the entire staff of ABC fired due to industry lobbying because the te-lie-vision doesn’t want you to know and advertisers call the shots now, not an internal moral code: <https://neighborsorganizingagainstrepassingtechnology.blog/2020/12/05/wi-fried-a-30-min-video-that-got-the-entire-staff-of-abc-fired-due-to-industry-lobbying/>

This next story is likely caused by installation of a WIFI router but in today’s world it could be a toxic combination of a new tower near the school and/or the new-fangled electronic utility meters. The article didn’t specify but my money would be on a new WIFI router. ...regarding an event at a junior high school in **Arlington, Texas** that you assuredly heard NOTHING ABOUT on the nightly news who sell ads to the providers of these toxic ideas and products. **“Since September, teachers and students at Nichols Junior High have reported similar symptoms, including nausea, trouble concentrating and dizziness. Some teachers have passed out in front of their students.”** Some have refused to return to work. Others say they’re requesting transfers. Now, they’re speaking out to News 8 Investigates, on the condition that we hide their identities for fear of retaliation: <https://www.wfaa.com/article/news/local/investigates/parents-teachers-demand-answers-as-arlington-schoolhouse-rocked-by-illnesses/287-395907519>

Chattanooga, TN has hard-wired their entire town with fiber optics, and it’s made their economy come alive: <https://www.nytimes.com/2014/02/04/technology/fast-internet-service-speeds-business-development-in-chattanooga.html> This could be a great solution right up to the point that it becomes infrastructure for more technology deployment. Obviously, it would be prudent to make sure of the “effects” before again following blindly. Let them be our test market and see how things are going FIRST.

Here’s the entire “WIFI” category on the NoMoreTowers site: <https://nomoretowersintheozarks.org/wifi>

P. S. It’s not that expensive to hardwire a school or a building so don’t let “expense” be the reason you don’t take action. The same is true for the meters to read the outlets and the filters to heal.

Doing nothing is not a good choice.

Cell Towers – How's That Going?

The first 3-minute video of interest titled, **“Credible Evidence That Cell Towers on Schools is Harmful Exists”** Testimony to Public School District can be found here: [Click here to view: https://www.youtube.com/watch?v=7-AkJKiYmXw&feature=youtu.be](https://www.youtube.com/watch?v=7-AkJKiYmXw&feature=youtu.be)

Here’s a 3-minute video of a cell tower being forced from an elementary school where four children have developed cancer in Ripon, California. Perhaps the most disturbing part of this story stated in a print article is that they intend to “relocate” this tower. Would you like to have it in your neighborhood? https://www.youtube.com/watch?v=a_2L-zzhzFc&t=6s or search for it by title on YouTube.com, Parents Demand

Removal of Cell Tower at School After 4th Child Diagnosed with Cancer. You can read the print article here: <https://www.techspot.com/news/79228-students-protest-school-cell-tower-after-fourth-child.html> And the week of April 8th, 2019, I wake to find a petition going around to remove a cell tower in Austin near an elementary school where a concerning number of children are getting cancer. <https://www.change.org/p/city-officials-shut-down-cell-tower-next-to-river-place-elementary>

In this link you'll see a group of concerned parents confronting a tower going up at their school. Interesting to hear the school admin list "money" as *the* reason for the school making this decision. Also, at the 3-minute mark you'll hear the "tower rep" state that the lease states that "If the gov't proves there is harm the tower company has to address it." Vague language to say the least and they tie it up in court. You can search it by title on YouTube.com, Milestone Cell Tower Shady Side Elementary Community Meeting August 2017 or See 5 short videos of parents objecting to tower placement at several schools: https://www.youtube.com/results?search_query=Milestone+Cell+Tower+Shady+Side+Elementary+Community+

A new tower recently went up by Verizon in Pittsfield, Massachusetts that's made 18 individuals sick; they had to leave their homes and remain unable to return. Is Verizon concerned? No, they've argued their "rights" now for 888 days, 127 weeks and 29 months. See this story here where you'll also learn that no politician, bureaucrat or official is coming to protect us! WE THE PEOPLE will have to change this: <https://www.facebook.com/pittsfieldcell>

Here's a link where over 150 doctors, scientists, and universities are screaming about the dangers of cell towers at schools: <https://neighborsorganizingagainsttrespassingtechnology.blog/2019/12/07/150-letters-from-doctors-scientists-and-universities-screaming-about-the-dangers-of-cell-towers-at-schools/>

Here's an article about how the cell towers in the national forest are mismanaged and lacking oversight. <https://www.courthousenews.com/group-cries-foul-cell-service-expansion-national-parks/>

Here's the Cell Tower category where you'll find a dozen articles on the subject of cell towers. <https://nomoretowersintheozarks.org/cell-towers>. There's several there worthy of review. This title alone makes me nod my head, **Study Finds Cell Tower Radiation is Linked to Type of Damage in Human Blood That Predicts Cancer**. <https://ehtrust.org/study-finds-cell-tower-radiation-linked-type-damage-human-blood-predicts-cancer/?fbclid=IwAR1ypSb7hsiOtZEccIdLgr26bVT4JbEwLyMc14Arg29TxIzw4-T27OlaTWk>

"So Where Are the Cancer Clusters from the Cell Towers" I wondered.

With my new awareness I start noting that cell towers are now literally in the back yard of some homes, at schools, and on top of apartment buildings where children live. I included an article in the original version of this document exhibits titled, **Cancer Link Confirmed in Largest Ever Cell Tower Radiation Study**, or click here: <https://www.wakingtimes.com/2018/08/21/cancer-link-confirmed-in-largest-ever-cell-tower-radiation-study/> And while I was reading those kinds of articles I'm wondering "Well where are the outbreaks of cancer or pediatric cancer if..." Shortly thereafter I got a private message from a parent of a child at an elementary school in Chicago's 19th Ward that has a cell tower on it, and two more nearby. Initially, she was reporting 10 kids with brain cancer within two blocks of the school. In a few weeks, she updated the information that now showed 16 kids and 9 adults within two blocks of this cell tower have or had cancer. As she and another parent continued surveying their neighborhood the story became a horror show and **she recently emailed me a list of 82+ people with cancer within a five-block radius of this cell tower, and two more; 21 of these cancer cases are children!**

Simultaneously a search online shows the public health office and even the University of Chicago have studied the issue and listed in one article the increases of the various cancers but stop short of admitting to

a “cancer cluster.” What I’ve learned is “the machine” is perpetually looking for things they never really find and never really respond to; much like the Michigan lead in the water ongoing “non-crisis,” the violent school, the mental hospital and the electrical concerns from the 1930’s. The articles refer to what these women did as “anecdotal evidence”, but I can’t see how going door to door with a survey and asking “Do you or anyone in your home have cancer? When? What kind? How recent?” can be misleading in fact. I think finding three people in one house with cancer is concerning. If this was your neighborhood and 82 people, and counting, within five blocks of a cell tower/s had cancer would you want to know? Do you think you have a RIGHT to be informed? And when the alderman stated emphatically that “the towers aren’t going anywhere” the reality that they “don’t care” if people are getting sick and dying was clear. I wonder why? I went to investigate and found the lease for that tower showing that **Mount Greenwood Elementary School is being paid \$37,500 a year.** You can view that lease at this link: https://propertyleases.cps.edu/Lease.aspx?Lid=127&fbclid=IwAR2Xf5-OeReufjbKx_6p-xFLZBKW0cXygbHbnHRDr2owL12NHKiWMyJNjns or search it by name/address.

You can see this school’s radiation readings on a video on YouTube or [Click here: “Elementary School Radiation \(Microwave\) Readings Chicago 19th Ward.”](#) You can also go to Google and type in “cancer cluster at Mount Greenwood elementary school Chicago Illinois” and read the stories of cancer running through a family. And when they mention there MAY be a problem with the water, remember that this radiation AMPLIFIES metals, chemicals, and pathogens! Therefore, any issue in the water will be amplified! I recall reading years ago that municipal water departments can use anywhere from 700 to 2300 chemicals in the water in the name of purification. We have taken the easy road on so many important matters and now we’ve done it again and this time we may have gone too far. By the way, I suspect the statement of “there may be a problem with the water” is an effort to create doubt about the true source, which suspends the issue to some degree. This is the same thing they did about cigarettes causing cancer. All they had to do was introduce “doubt” while they continued the roll out. Never mind the “Precautionary Principle” that has guided and restricted the ideas of humans thus far. No more...that too is to be ignored in favor of tech.

“Mount Tabor Elementary School had a microwave radiation reading 50x’s higher than standing 100’ feet from a cell tower” according to the WirelessWatchBlog.org.

I didn’t do a major search on schools with high radiation. I was simply working on this document, and these came across my path. I wonder what I’d find if I went on an intentional search. **I THINK MANDATORY RADIATION SURVEYS ON ALL SCHOOLS MIGHT BE IN ORDER DON’T YOU?** Seems like some profiteers are exploiting the typically strapped for cash public schools. Apparently, I’m not the only one who thinks so as Oregon just introduced SB 283 on 3/19/19 and will hold a public hearing on 3/27/19 “Relating to exposure to radiation in schools in this state; declaring an emergency.”

Cell Phones

Of interest, one of the electricians who came to help us was recovering from tail bone cancer. I had NEVER heard of tail bone cancer until that moment. He shared this as he returned his cell phone to his back pocket. When I shared my concern, he turned white, and his work partner anxiously chimed in that his brother had the same kind of “rare” cancer. Sure enough, as I inquired further, yep, the cancer was in his brain behind his ear where he wore his blue tooth gadget. HELLO? Neither of them had ever made the association. I now know five people with cancer from their cell phones. A friend in Houston, a doctor’s wife, posted a reply comment that she knows “dozens.”

Curtis Bennett of <https://Thermoguy.com> has every electrical credential that exists, I think. He’s an expert you should get to know! In the image below he points out that the cell phone safety test was done on a plastic head with a chamber in the top where they put a water/dextrose solution and a thermometer as

if this is a true representation of the human head and the human brain is irrelevant. “That’s a fine test if you have a plastic head!” http://thermoguy.com/wp-content/uploads/Cell_Phone_Radiation_and_SAR_TEST1.pdf

It’s an offense to the issue of “safety.” Beyond this, they were sold to us as “the latest greatest” gadget when the truth is, they are a small microwave radio that people are now putting up to their heads, in their bra, front and back pockets, and into the hands of their children. Consequently, brain tumors are headed up, ischemic strokes in men 35 to 44 increased 40% between 2003 and 2012; 30% of women in the same age range. Another recent article says heart attack rates are rising 2% per year for those under 40 now. Yet another recent article cited colorectal cancers are on the rise in our young people from carrying those phones in their pants pockets. Speaking of injury did you know that little girls are born with all the eggs they’ll ever produce in their ovaries? When you expose them to radiation that does single and double-strand DNA damage we are **risking seeing a lot of mutations in coming generations**. As it stands now, predictions are that we will be at a global sperm count of **zero** by 2045; Dr. Martin Pall, PhD puts this estimate much sooner with current rates of exposure. Professor Olle Johansson, PhD of the Karolinska Institute, Dept of Neuroscience reports that **after five generations of Wi-Fi we will have irreversible sterility**. That means my granddaughters grandchildren will be the last humans and I think that’s stretching it. A recent article showed we’re already down by 59-63% since the early 70’s. Perhaps this is a good thing as humans are NOT getting smarter.

A new book I’m reading by Shannon Rowan, WIFI Refugee, shares that **the US Brain Tumor Association is reporting brain cancer as #1 in 15-to-19-year old’s!** Aren’t hearing this from the mainstream media, are you? It’s a pretty good book so far and will help you grasp what’s going on and you can read several stories of people being exiled from their lives, their families, their jobs, their world. https://www.amazon.com/dp/B0B6XMWK9Y?psc=1&ref=ppx_yo2ov_dt_b_product_details

Sadly, there are so many people profiting from this that I feel like I’m spitting on a wildfire here, but it’s the only thing I know to do is to write, educate, plead, email, and **HOPE SOMEONE THAT MATTERS WILL HEAR ME!!!** More of Mr. Bennett’s comments that need to be contemplated soberly:

“Governments are not political parties; there are codes and standards for all reasons. Banks wouldn’t lend a dollar if buildings weren’t code compliant.” He goes on to point out that everything in existence is made of molecules and atoms and that these man-made energy forms are actually creating vibration and that building code has a “zero tolerance” for vibration. Did you get that? We are vibrating **EVERYTHING** at the atomic level!

“I am one of the millions of electrical police where we NEVER put people in an electrical circuit. Bees and pollinators will die and NO MORE FOOD, this is a global emergency.

“... EVERYTHING we do electrically globally is to keep humans from being in a circuit or we are liable.

“The Limits of Human exposure used globally is measured in watts per sq. cm. Centimeters is metric and there are 2.54 cm in an inch. The unit of measurement is an admission of harm and not applicable to human biology. Square centimeters or sq. inches means you are 2 dimensional and flat. Length X width. If it is to imply the surface of the skin only, it is still inaccurate. **The entire body is atoms and molecules(energy) SUBTLE ENERGY where magnetic, or EMF interaction can have a profound effect.**

“People need to understand you, and your baby, including the one in the belly, is the conductor in the wireless electrical circuit. It is called communication for end use device like a phone, it is radiation and biological hell on earth.

“... **We are subtle energy**; planet Earth has a frequency of 7.8 Hz or 7.8 cycles per second. Smart meters are 900 million cycles per second, Wi-fi antenna 2.45 billion cycles per second. A delta brainwave when sleeping or healing .2 cycles per second. A mom rocking a baby .2 times per second versus 2.45 billion times per second with Wi-Fi interaction.

“My government credentials recognized in ALL of Canada for using ALL electricity means I am an expert. There are 100s of millions globally in the construction industry that have the same credentials. **No one was informed.** Do you think unions will accept the plastic head or potato science? This is our job or there is liability. (His comment about “potato science” is referring to Boeing using sacks of potatoes to determine the safety of WIFI on airplanes.) Google it and you’ll find many news sources sharing this as well as Curtis Bennett.)

“Canada didn't do their job. Health Canada was pressured to amend Safety Code 6, so they retained the so called intellectually elite called the Royal Society of Canada. They didn't do their jobs and will be accountable to the Auditor General of Canada. **They will be sued and criminally prosecuted.**

And another day he wrote, “How much electrical current can you legally induce into a baby, pregnant woman or any human? The correct answer is zero, we are not electrically compatible. **EVERYTHING we do as electrical professionals is to protect life and provide a path for electrons to go to ground and not through you.**

“These RF EMFs are not supposed to hit people, or it triggers nerves and muscles. Dr, Goldberg expanded on that saying the nervous, hormonal and immune systems would be compromised at the same time.

“Induced current increases cellular voltages where millionths of a volt increases changes white blood cells. **When frequencies mix, there are resultant frequencies.** What happens when you mix 900,000,000 Hz or cycles per second with .2 Hz or .2 cycles per second? You get 4 resultant frequencies, and the .2 Hz is the brain when resting or healing.

“FortisBC admitted under oath that one antenna in their smart meter reached 2-3 km or 1.8 miles. FortisBC admitted they will cover 17,000 sq. km. That is a man-made microwave oven that covers 6564 sq. miles. In order for the wireless circuit to work, you have to be in it, and you are safe if you have a plastic head.

"A little radiation will have devastating effects on ANYTHING the EMFs interact with. That is basic physics. Dr. Lynch referred to electrons in our body being intellectually driven and it is an amazing reality with our biological function. RF EMFs will force electrons and are invasive. None of it was considered in the plastic head science."

WATCH THIS VIDEO! It's 12 minutes long. YouTube.com title to search is, Curtis Bennett Safety Code 6 Presentation to the Royal Society of Canada <https://youtu.be/cImb6Xwn6R4>

In the book, Hidden Dangers, there's an account of a couple in Vermont who were paid \$1 million by a utility company who put a tower near their home, so we now have legal precedence in the US, but we need lawyers who are willing to take this on. I believe a lot more of these suits are likely to start happening. There's already a major global movement forming that's pretty much a "Fill in the Blanks" lawsuit using commerce laws. I understand another person is preparing a criminal complaint. As I watch more people getting ill, seeking retreat in their car, a metal shed, or a radio quiet zone this uprising seems inevitable. Keep reading and you'll see that someone writing a check, isn't going to fix this no matter who we get to pay. **This is going to take a grassroots awakening and effort of WE THE PEOPLE.**

Failure to Act, Corruption, and Apathy

Samuel Milham, a doctor with an obsessive affection for government statistics wrote a small book titled, *Dirty Electricity, Electrification and the Diseases of Civilization*. (www.sammilham.com) The opening line of the preface to his book reads **"This book is written in an urgent attempt to warn you about what I believe to be a global man-made health threat...There is a high likelihood that most of the twentieth century 'diseases of civilization,' including cardiovascular disease, malignant neoplasms (cancer), diabetes, and suicide, are not caused by lifestyle alone, but by certain physical aspects of electricity itself. The data to prove this has been available since 1930, but no one investigated it. Consequently, the 'wars' on cancer and cardiovascular disease are doomed to failure, because a critical etiological factor has not been recognized. What's more, these very diseases are now increasing in the population in direct proportion to our increasing exposure to high-technology electrical devices."**

I included a story in my book of a charter school in Appleton, Wisconsin where "challenged" kids attended. A man named Paul Stitt and his wife Barbara offered to give the school \$100,000 IF they let them take over the food on the campus. They brought in all natural, fresh foods and even disconnected the water fountains and placed a high-quality spring water throughout the hallways. After one year the truancy and violent events had dropped to zero. The kids were focused on their academics and physical health and the school reported the biggest problem as not enough parking. I also included the story of a mental hospital that removed all refined sugar, salt, and flour and within 30 days 50% of their patients were in their right mind. **Sadly, the "powers that be" did NOTHING with any of that information which is likely the reason none of the electrical information was ever investigated, perfected, and applied! Humans aren't doing a very good job of being stewards so look where we are.** You can see a short video about this school here: <https://www.youtube.com/watch?v=LgabV3Ktgww&t=225s> or you may search it by the title, Impact of Fresh Healthy Foods on Learning and Behavior, on YouTube.com.

I also found a very interesting report by Harvard Ethics titled, **Captured Agency: How the Federal Communications Commission Is Dominated by the Industries It Presumably Regulates.** [Click here to read it: Captured Agency.pdf](#) or if you're reading a hard copy of this document, you can search it by its title. The bottom-line conclusion presented in this 59-page document...the fox is guarding the hen house and our FCC is made up of executives out of the wireless industry. I wonder where their personal investments are.

What Makes Some People MORE Vulnerable?

People need to remember that we aren't all the same biologically-speaking. For some people a peanut or a bee sting can be deadly. Some of us have genetics that make it more difficult for us to rid our body of toxic substances. That MTHFR gene and it's mutations reportedly affects 40% of humans! I think of us as "ENVIRONMENTAL WARNING MESSENGERS". We shouldn't be mocked and misunderstood but should be regarded. Scrutinized, yes, but when/if a reasonable explanation, meter readings, and tons of experts agree then it's a good idea to RESPOND appropriately to the insights and be grateful for them. We even have genetic testing now, know the identity of, and have named many of these gene mutations. You can read an article on the MTHFR gene mutation, just click here: <https://www.amymyersmd.com/2017/07/what-is-an-mthfr-mutation-and-what-to-do-about-it/>

The Canadian Initiative for Safe Wireless, Electric, and Electromagnetic Policy covers the subject of **"What is Electrohypersensitivity, Likely Causes, Common Symptoms, Four Stages of the 'Environmental Disease'"** and Prevention Tips. The USA is so corrupt it could be another decade before we see them admitting, much less trying to diagnose, treat or prevent because too many lawsuits are going to happen. According to this document I'm entering the second stage **"Eventually, if the stress continues for long enough, or there is a sudden surge of stress, adaptive mechanisms are exhausted" and the body is no longer able to adapt or sustain the constant injury.** This site also legitimizes a critical piece of information explaining why some are more sensitive than others in their *Living with Electrohypersensitivity Survival Guide*. The opening line reads **"Human beings are bioelectrical systems. Our hearts and brains are regulated by internal bioelectrical signals. Environmental exposures to artificial EMF's can interact with fundamental biological processes in the human body...Without mitigation of the incitant, people with environmental sensitivities may become severely debilitated."** It goes on to read **"Coping strategies are critical for people with environmental sensitivities/intolerances, as they may experience the feeling that their lives are being 'turned upside down.' They may have lost their ability to work. They may be unable to socialize outside their homes or even perform routine tasks such as grocery shopping..."** YES! YES! YES! And then there's the fear of having no control over your environment as it progresses around you, and the people who could help you, *think you're crazy while they continue to believe that 24/7 chronic microwave radiation exposure is okay and demand more towers for better phone coverage?* It's really quite ironic. You can find that guide here: <http://www.weepinitiative.org/livingwithEHS.html>

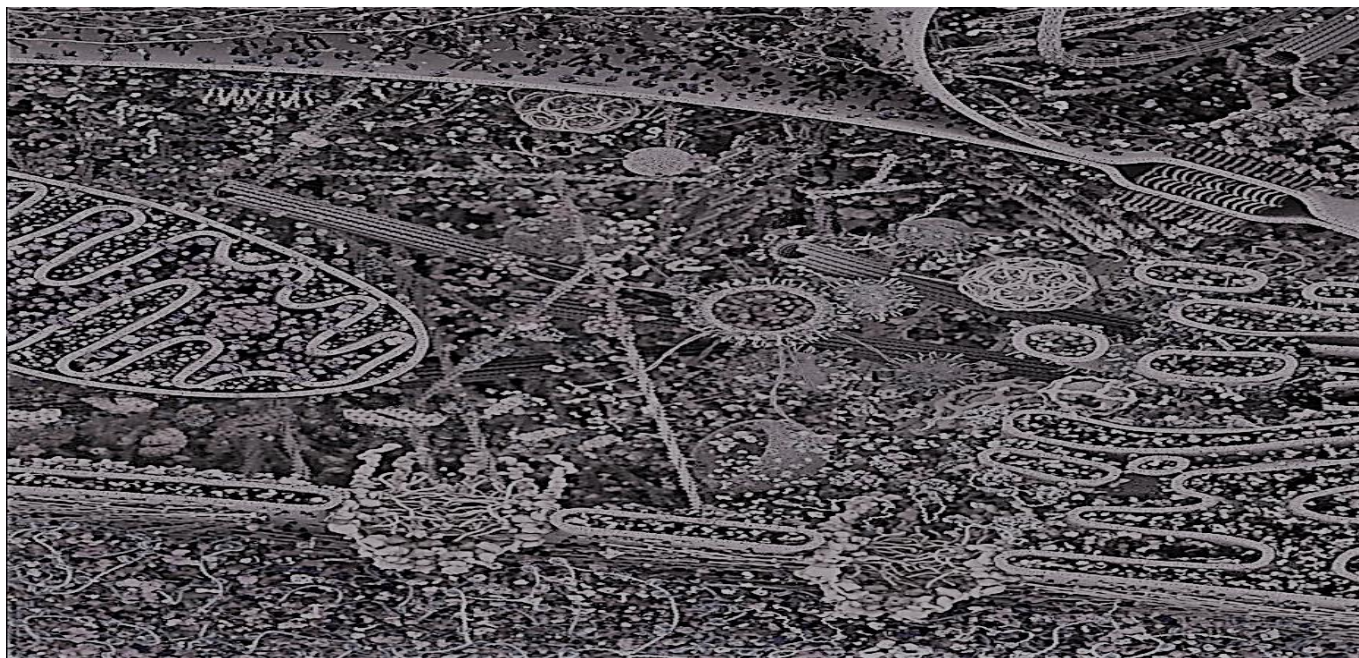

Despite all their education, masses of medical and scientific minds apparently forgot basic science and put mercury amalgam dental material in a bunch of people's mouths, in spite of what was already known, and regardless of their genetics, and continue to do so. These fillings actually release mercury vapors continuously as hot foods, liquids and the abrasive act of chewing occur. **They also produce a high voltage**, which means that people with this material in their mouths are actually MORE susceptible to the hazards of radiation **and have more "antenna-like" qualities**. Remember, it amplifies metals! Given the right genetics, you have a recipe for a health crisis. There are many disincentives for a medical professional to acknowledge this! I had my dental fillings revised in 2005, spent \$5000, and spent 18 months detoxing my body the best I could but have no real assurance that the impact is all gone. In fact, I think it imprints the body and weakens the host compared to what they may have been without it. Again, this knowledge is ignored, and corruption buries the chances of justice.

"Oh no that can't be true! That's crazy!" Really? Crazy like bringing in asbestos, chemically tainted tobacco, Thalidomide, DDT, GMOs, Operation Paperclip, The Tuskegee Experiment, or letting corporations grease the palm of our legislators, or allowing politicians to reroute a portion of foreign aid to themselves through their kids or take contributions from corporations in exchange for "donations"? **When did we forget that we shouldn't trust the government?**

If you go to YouTube and type in “The Smoking Tooth”, Dr. Layton, D.D.S has a 3-part video, each just a few minutes long: <https://www.youtube.com/watch?v=fJVBYZEsqEU&t=200s>. One of them has footage of a sheep they put mercury fillings in its teeth and then later x-rayed and showed where all they measured mercury in its organs. We learned this in The Mad Hatter story, didn’t we? Preserving beaver pelts with mercury made the makers and the wearers of the hats go “mad!” I saw a dozen doctors in 18 months and every time they, or the nursing staff said “Open your mouth and say ‘Ahhhh’” the answer was staring them in the face, but they simply weren’t trained to see it or to think to look for previous “human intervention” or consider my genetic leanings. That’s how out of touch our medical world is. They are completely blind to some information. They should be taught to look for any human intervention in the body as a possible source of illness as well as their patient’s diet, relationships and environment as few health issues are a Rx drug deficiency but “if the only tool you have is a hammer, everything starts looking like a nail”. Once I had them replaced by a highly qualified dentist trained in safe removal protocols and spent 18 months detoxing my body, I was able to reverse my Hashimoto’s Autoimmune disease and seem to be currently successfully getting off of thyroid meds I’ve been on since 1997 because we actually do live in a self-healing organism if we know how to accommodate that. You can learn more about the safety protocols here: <https://iaomt.org/about-iaomt/>

Again, I’ll ask, where are the true intellectuals? Is there anyone still out here directing this ship who isn’t just going mindlessly along following mainstream ideas without question? Remember, we will reap what we sow, not what we prefer. The ripple effect of consequences we’re facing as a culture for our breach of independent thought will be massive. **Where are the thinkers?**

Next is an image of The Interior of a Eukaryotic Cell. Can you see what looks like electric circuits? We are electrical and frequency beings so it’s not smart to put us in a WIRELESS environment and assume it has no effect on us! The human body has 37.2 Trillion cells and most of us humans are ignorant about what all they do.

“...we are fearfully and wonderfully made...”

On page 2 of that Canadian Initiative for Safe Wireless...the opening article “What is Electrohypersensitivity” site states “Because the body of evidence is only now being taken seriously, most family practitioners are still unaware of EHS or anything that is involved in treating it.”

The Canadian Initiative to Stop Wireless, Electric, and Electromagnetic Pollution site <http://www.weepinitiative.org/livingwithEHS.html> states on page 9, “Not only do amalgam dental fillings attract EMF and electricity to your body, they create electrical current, and they contain mercury. Mercury is very toxic and is difficult for the human body to process and get rid of. Heavy metals in your body may have contributed to your getting sick in the first place. There are many ways in which you could have acquired heavy metal toxicity, but dental amalgam fillings are a major source of contamination. It is not a single incident contamination but an ongoing leaching into the body.”

This same site states on page 4 that those affected should “**LIVE AS FAR AS POSSIBLE FROM** power lines, distribution lines, electrical substations, electrical bus cables and cell phone towers.” Uh huh. So, what do we do about the cell towers, antennas, and a microwave grid of electric meters put around us?

In this presentation I’ve provided several articles that establish this to actually be a disabling environmental disease according to several countries, several medical authorities, scientific groups, and beyond. In fact, it was hard to pick what to include in this story as I could easily have cited a train carload of published studies on harm. **The days of “There’s not really any science to establish harm from technology” ARE OVER, wireless or wired!** And once you head down this corridor and see what we’ve allowed, you should be horrified.

“As the objective evidence of the physiological effects causing EHS becomes convincingly established, there is increasing worldwide legal action on behalf of people with EHS. Studies since the 1930s are now showing a consistent weight of evidence confirming the specific symptoms of EHS, also long known through geomagnetic studies and electronic warfare since 1953. Since 1982 in the US, and since 2011 in Europe, courts in many countries have accepted the reality of physiological EHS along with non-thermal EMF effects and made awards and compensation for people with EHS including awards against those businesses responsible for the excessive radiation.”

The above quote is the opening paragraph from <http://www.electrosensitivity.co/legal.html>, a site I’ve been pouring over for several weeks. It’s DENSE with content specific to the legal issues establishing this to be a “functional impairment” and/or a “disability” with global content, lawsuits won, countries who have implemented Wired-Only connections in schools and accommodated those disabled thereby setting precedence, just not in the sold-out to corporations US gov’t. It lists several states that are introducing bills requiring “Safe Zones” and “Wi-Fi Free” areas much like the “Non-Smoking” laws. It’s getting a little harder to ignore the stark realities of where we are! So, are WE THE PEOPLE going to protect what remains because the same government that allowed this isn’t likely to also save us.

Here’s another excerpt from this site:

“Informed consent is required for experiments on humans involving non-ionizing and ionizing radiation. It appears that some countries like the US try to evade this requirement by claiming that such experiments, even where they cover large populations, come under 'classified research'. The irradiation of the population by cellphone towers without prior testing, where any adverse health effects will be discovered as a result of this irradiation, is often regarded as an experiment on the population without informed consent.”

I found a **Public Law 90-602** – October 18, 1968, document online. (Exhibit E) **The stated purpose of the law is to “amend Public Health Service Act to provide for the protection of the public health from radiation emissions from electronic products.”** Apparently, we’re going to ignore that too! I’m currently

looking for the new law or amendment that says “Never mind. Radiate the public... as long as you contribute to a politician’s campaign. Here’s a link to review this Public Law 90-602 https://en.wikipedia.org/wiki/Radiation_Control_for_Health_and_Safety_Act_of_1968

The Bioinitiative Report at <https://bioinitiative.org/> is the largest independent study of the biological effects of electromagnetic radiation exposure. The summary alone is +/-**1200 pages** detailing all the ways it’s destroying living things. Electronic version, click here: <https://bioinitiative.org/research-summaries/> **The consensus is that the “safety standards are wholly inadequate, and many crimes are being committed.”** The US gov’t just finished their own \$25 million study, the National Toxicology Study and found heart, brain, and adrenal tumors in the rats **AFTER** they allowed cell phones/towers to flood the market! <https://ntp.niehs.nih.gov/results/areas/cellphones/index.html> Along with all the other breeches happening with the technology these days it is imperative that we put a HALT on all of this assault and get some sanity back into the picture.

PubMed is full of articles on the matter: **Biological effects from electromagnetic field exposure and public exposure standards.** Be sure to look at the “similar articles” at the bottom of the page: <https://pubmed.ncbi.nlm.nih.gov/18242044/> This alone will take you on quite a journey.

Have I been tested to confirm my diagnosis? Well, since there are only a few clinics throughout the entire world that are willing to admit, much less venture to treat this condition, coupled with the reality that these clinics require cash payments that 99% of people can’t afford, and I’ve been unemployed for almost 6 years, the answer is no. So how do I know that I have it or how can I convince someone else that I have it? Well, I have a “Body Voltage Meter” that measures my body’s reaction to its electrical environment. In Austin, we had granite countertops in the house, which we’ve now learned can emit a small amount of radiation in the form of radon gas. I was testing everyone that came through the house for a while. Anyone who touched it saw their body voltage would increase. My body typically gave a reading three times higher than anyone else and that was from touching granite. If I got in a high EMF environment the readings would again be three times higher for me. And when I step on a grounding mat, my body voltage drops way down proving that methods to protect my body are in fact working. It’s a bit more complex than that but that seems to indicate that my body responds differently than many other people. Because we are so unique energetically and constantly in a state of energetic flux, every person being exposed can experience a different symptom. Appliances don’t seem to bother me, but a friend can’t be around a running refrigerator or air conditioner. She can use a cell phone if needed but I can’t tolerate them at all. Other articles appear on NoATT.blog under the category heading of “Electrohypersensitivity”: <https://neighborsorganizingagainsttrespassingtechnology.blog/2020/05/21/electrohypersensitivity-as-a-newly-identified-and-characterized-neurologic-pathological-disorder-how-to-diagnose-treat-and-prevent-it/>

There was the time my mom, sister, and I were going to dinner. I can’t ride in a car with a cell phone on (neither should anyone else) and always step far away from any cell phone in my presence; they make me hurt and feel ill almost immediately. So, everyone reported that their phones were OFF. We got a few minutes away from the house and I started feeling ill and asked, “Are you both certain your phones are off?” They both replied “Yes” and immediately my mom’s phone rang. So yes, I can feel it even before it rang, I was feeling the signal coming in! Another time I was helping my sister move from a storage unit and never felt anything from the tower in sight at a distance but when a daunting depression hit me for a week and I finally made the connection I realized I was in fact being affected, whether I felt it or not at the time of exposure. Different frequencies reportedly cause different symptoms so you might understand why this toxin would be hard to pinpoint.

Another point is made in the Generation Zapped movie at the end when the wife of a man who has this condition says, “If you think these people are faking it, come live with them” or something to that effect.

Problems With the New Electronic or Digital Utility Meters

Okay so that’s just a few of the issues at hand. Let’s talk more about these new-fangled digital electric meters being put on people’s homes without their fully informed consent. They’ve been outlawed, recalled, and are being widely investigated! An online documentary titled Take Back Your Power can be found here <https://takebackyourpower.net/> or just “Google” the title...it’s worth your time to view. This is the video that cued me in that something illegal was going on. Somebody has an agenda because they were hiring contractors to install them who were kicking in basement doors and cutting perimeter locks to install them without the customer’s consent or knowledge and in fact, often in spite of objections. One article shared details of interest: <https://takebackyourpower.net/hundreds-of-smart-meters-simultaneously-explode/>

THIS EXPLOSIVE DOCUMENT SHOULD BE EXPLORED. It’s a 257-page pdf that shows that the utility corporations actually violated the 2005 Energy Policy Act which forbade the FORCING of digital electric meters. THEY COULD ONLY BE OFFERED, NOT FORCED. They further violated it by taking gov’t grant money by claiming they would create jobs and failed to disclose they would also TAKE JOBS AWAY. Most egregious is that they then used a secret bank to hide their dirty deeds: <https://neighborsorganizingagainsttrespassingtechnology.blog/2026/06/10/legalconstitutionalandhumanrightsviolationsofsmartgridandsmartmeters/> It’s being mailed to private agencies seeking enforcement.

The Province of Saskatchewan (Canada) ordered the removal of 105,000 meters following a rash of fires. Portland, OR, Lakeland, FL, Arizona, and Ontario followed suit. There is currently an effort by Curtis Bennett in British Columbia to recall the entire program in Canada. His website is Thermoguy.com and he’s an expert on these meters and declares adamantly that they are a violation of building codes and are illegal as applied.

New Mexico has rejected them in ALL of their metro areas.

Michigan has a massive citizen effort to get rid of them.

The state of Virginia just rejected them statewide.

Montana has just rejected them as well.

80 of these “smart” meters ignited from a power surge in Palo Alto, CA in 2011.

Massive recalls and rejections of this technology are happening in Europe as well. Fires, explosions, health concerns, and privacy violations are the biggest issues.

The source article cited above states other issues with the meters including that they” ... **emit pulsed microwave radiation typically thousands of times stronger than a cell phone, leaving many unsuspecting homeowners feeling ill.**” [emphasis mine]

Another Source: <http://emfsafetynetwork.org/smart-meters/smart-meter-health-complaints/> has 232 pages of health complaints from electric meters and now the cities are bringing in “Smart” water and gas meters too! Are we going to ignore the 232 pages too?

Another site helped me get a visual of the amount of radiation from these meters throughout a neighborhood, how they work, and why they are harmful. SmartMeterEducationNetwork.com from Michigan where they use a wireless electric meter. The site explains that Smart Meters emit "...the same waves that cell phones emit, but smart meters broadcast 24/7 at a power density 100 to 160 times that of a cell phone...and smart meters generate dirty electricity (line noise) which is as harmful to health as the wireless radiation the meters emit...**Analog meters do not require electricity to run and are more energy saving...can't be hacked...do not generate harmful dirty electricity, unlike most, if not all digital meters.**"

Still in Austin...there were two more apartment complexes being built that could make me even more sick due to their proximity AND they will no doubt be outfitted with these same meters; 273 of them on one complex. This new complex is about 200 yards from where I was stung by a rogue current and my sister another 150 yards beyond. There's a HUGE cell tower near this complex too about 100 yards from Gorzycki Middle School and a small electric substation. I'm very concerned about the people living in this toxic soup but also about my own wellbeing! Will I too have to flee or live in a metal shed in the back yard or a shielded room? Yes, we fled to the Arkansas Ozarks and yet another mission was born! Stay tuned.

Again, Curtis Bennett warns, "...There is 900 MHz and 2.45 GHz interacting with 8.3 Hz or .1 Hz of the brain is crashing the human electrical grid plus much more...FortisBC's own Electrical Engineer Lindsey's quote at a meter swap in Kelowna that 900 MHz of the smart grid interacting with 8.3 Hz would create ALL kind of harmonics. **The 8.3 Hz is one of the frequencies of the brain and an admission of adverse health effects.**"

This could explain why they've built THREE memory care centers within minutes of our Austin home in the last few years. My neighbor recently told me that they have SIX friends in their inner circle with dementia and their 56-year-old son just got diagnosed with Early Alzheimer's. I have a picture on one of my Facebook pages of a large billboard promoting the Children's Alzheimer's Foundation and there's now such a thing as Pediatric Dementia. What's so sad is to watch the medical professionals act bewildered knowing they have no clue what kind of technology is around their patient. Hopefully, this little booklet can change that. The Earth has a pulse that matches the human brain so when we clog up our atmosphere with electrosmog we also impair brain function. It's great for business if you want to open a six-story memory care center and sell Rx drugs but if you want a healthy populace and healthy pollinators then perhaps this is a horrible idea.

It was in a phone conversation with Mr. Curtis Bennett (Thermoguy.com) where I learned that our utility provider (PEC) recently switched our meter to an analog, and it was done "under full load" in violation of professional standards and maybe more. I watched it happen but didn't know any better. He also pointed out that according to Texas Construction Law the only person legally able to change a meter out is a licensed electrician. I'm betting that's NOT what I saw done here at our home. Mr. Bennett made the very valid point that at this appointment the homeowner should have their own professional electrician to inspect and perform any maintenance as the utility company can't legally touch the stab connections, which belong to the homeowner and the homeowner can't remove their meter to inspect them. In fact, this meter had not been off the house in 13 years. I can't help but wonder if there's a professional standard or if it just typically isn't adhered to in the industry. Again, having an electrician representing the homeowner would be a good protective measure for everyone, though cost-prohibitive for others. The article linked here is a 13-page article from Thermoguy.com site, page 9 of 13 shows why these stab connections should be inspected periodically! <https://thermoguy.com/wp-content/uploads/Response-to-FortisBCs-Daily-Courier-Article-Advances-Meters-are-Safe-and-Smart.pdf>

Of interest, The Seventh Circuit Court of Appeals deemed that it is ILLEGAL to collect usage data even if you never do anything with that data. To collect it constitutes "illegal search" ...you have to have a warrant. PERIOD. So, every day data is collected is a violation of the law but we're apparently going to

set aside this law too now to accommodate technology! Forfeiting civil rights to accommodate technology is a bad idea! Think about China's social credit system. <https://www.eff.org/deeplinks/2018/08/win-landmark-seventh-circuit-decision-says-fourth-amendment-applies-smart-meter>

Tucker Carlson on Fox News ran a series titled "Tech Tyranny" that you can review on YouTube and his reports are revealing "nefarious" and predatory behavior by big tech, and a callous disregard for all that is good. You can also search the term "technocracy" and see where we may be headed. It's not good!

So, if this wireless stuff amplifies chemicals, heavy metals, and pathogens AND simultaneously opens the blood-brain-barrier can you see how this can sabotage someone's mind and health? People who have a latent gene can get shoved over into full blown disease and will! **The sick will get sicker, and the healthy people will become sick. It's inevitable in this environment.**

If you watch the documentary, Take Back Your Power, you'll see there's a cancer cluster specific to a certain dorm room that has claimed many young promising lives. A grieving Mom shares her horror story, and the list of cancer deaths from one specific dorm room, and yet, more towers go up; lower, more ominous, and more Smart Meters. Are you hearing me?

At the following link you can read a few paragraphs and watch a short video showing how **electric meters cause "Nerve Disrupting Frequencies."** He states in the article "Unless they cease, desist, and bring down the wireless 'smart' grid at once, **'smart' meter manufacturers and the utilities that use them are going to be facing massive liability** and personal injury lawsuits because, unlike the microwave radiation that anti-"smart" meter advocates have been calling attention to for years, there is no scientific dispute regarding the biological effects of 2 to 50 kilohertz frequencies." <https://sagaciousnewsnetwork.com/nerve-disrupting-frequencies-radiating-from-smart-meters/>

I couldn't find an Underwriter's Laboratory Code for the one's in use here which is a safety accreditation. When I inquired, I was told by Carroll Electric Cooperative Corporation that "they meet ANSI standards" as if that was supposed to allay my fears. My thought in response, **"With the readings I'm finding here that tells me that ANSI is compromised."** So, I went looking for evidence of that accusation. Sure enough, I met a man online who made many videos about the insanity of our safety certification oversight agencies in the US and globally, and one video showing that ANSI was being overseen by a member of the CCP (Chinese Communist Party) from 2015 to 2021. He detailed that any member of the CCP has a "duty" to collect data for them. When you add the fact that 501C4 "Dark Money" is allowed in our electric industries, meaning the contributors aren't revealed, and the fact that many of our politicians have sold their soul it gets very concerning!

You can find Daryl Guberman's YouTube channel and view several videos regarding ANSI at this link: https://www.youtube.com/channel/UCRChXeTxqdf2x_SGt3qfRFQ/videos?view=0&sort=dd&shelf_id=0

In the event that Daryl Guberman's YouTube channel should get shut down due to the explosive content he shares about the "safety accreditation mill" that has become our government safety oversight you'll find his contact information at this link: <https://neighborsorganizingagainsttrespassingtechnology.blog/2019/12/07/china-says-your-smart-meter-is-safe/>

The picture above should be shown to our home insurance providers. Maybe they'll help us get these off of our homes since they'll have to pay for the damage! **It's a subdivision and every house burned to the ground that had an electronic utility meter and the four homes with an analog meter are still standing.** Someone on Facebook commented they are friends with a woman, now an author and speaker, who was in this kind of story in her subdivision so now I have a person to back up this image.

Every provider asserts their equipment is somehow "better" than a "Smart Meter" or better than another utility company. I've yet to see that statement supported and that does not mean they are inconsequential in the pool of contributors, IT'S ALL OF THE ABOVE, the radar, the towers, the phones, the utility meters, the satellites, smart devices of all kinds...so we need to make some choices. And so far, every utility company makes the same claim that their meter should be above scrutiny. Uh huh, says who?

Power lines by themselves have "consequences" that we accept to have power and we should look at any methods that can improve what they are but when you add the "wireless" aspect of what we're doing there's a qualified need to retest what you've deployed to see how they play together. Likewise, when we have analog, mechanical only meters, that don't cause issues we need to be using them and eliminate this contributor to the overall radiation load in our environment in addition to hackability, privacy invasion, and they're being subject to fires and explosions.

We Fled to the Arkansas Ozarks and Yet Another Mission was Born

Though our family founded Blakely Town, now Arkadelphia, we'd always lived in Texas and didn't know Arkansas was "The Diamond State" until we began our search for a new home. We both thought Jasper was someone's name until the seller of the home said, "For some reason I feel like I NEED to tell you that Jasper is a gemstone." I laughed because I knew why. God wanted me to know I was sitting exactly where He'd told me I'd be, 31 years ago. That means He knew what He was going to teach me and perhaps knew that you would be reading this and would be willing to help HIS MISSION. ***This moment matters a great deal.***

Let's connect some dots:

November 2019, we arrived here.

December 2019, 46-year-old Staci Wheeler died reportedly of a heart attack. The husband has not responded to two email offers to borrow our Stetzer line noise meter to check his home's electric outlet readings. This death is considered highly suspect that dirty electricity from the electric outlets is to blame but we'd just arrived, so I didn't get it until...

December 2020, 60-year-old, Lesa Tanner Massengale, was found with multiple masses on her brain, same side of her head as an abnormally high up on the wall electric outlet by her desk. We found deadly readings coming from that electric outlet which was even with her head at her desk and throughout the office area. The brain masses were on the same side of her head as that outlet. She died three weeks later. **THIS was the event that yanked me out of the notion that I was some rare individual being adversely affected. I realized then that other people just didn't feel it but instead they get hit with a major symptom onset, bad diagnosis, or drop dead.**

A letter was distributed widely in town attempting to make people aware of the DEADLY READINGS found at that electric outlet and throughout buildings in town. One person responded in a personal capacity, not officially through his office, encouraging me to contact the Newton County Health Department. I was confident that people were at least talking about the issue and in time, they'd see and respond. **Then,...**

December 2021, 54-year-old, Candace Sexton, another beautiful healthy soul, dropped dead of a heart attack. MAJOR CLUE: Lesa and Candace both worked in the same building where the first high readings were found in public buildings; the hardware store, lumber yard and grocery store. They died 13 months apart.

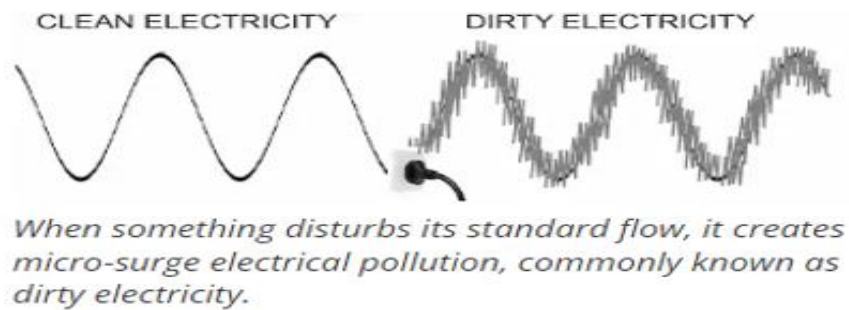

I have no idea why it's December, but we're 3 for 3 now. We can speculate that holiday lighting and extra demand on the "grid" could be causing some unknown electrical surges. There's a link to a 5 min video a few paragraphs down that covers this reality.

We have to admit that while lots of new tech has been brought into the world, we have failed to also provide alarm systems to tell us when toxic levels are unsafe, like a carbon monoxide detector. Perhaps that's why God sent me in. I'm a walking, talking, researching, and typing warning meter SENT to show you what's going on.

So, let me share some things about electric meters in general: First you need to know that the electric power coming into a utility meter on the electric lines used to be a smooth 60 Hz sine wave like you see in the image below on the left. It passed through a non-electronic, mechanical only meter, which measured the amount of current that flowed past it by turning a horizontal wheel with teeth on it that then clicked the little clock looking analog dials, which turned some numbers and that was our wattage usage charted monthly to determine our electric bill we had to pay. No electronics were involved so the 60 Hz wave was just a nice smooth wave coming out of the other side of the meter into the home/building. When the utility companies decided to use this new technology, it radically changed this smooth wave coming into our buildings as it now has a chaotic signal that rides along it as you see in the image on the right, **but nobody warned you.** This chaotic signal can be measured on a meter and should be filtered to a reading of 30 or lower, anything over 50 is undesirable and must be filtered.

If you go to <https://nomoretowersintheozarks.org/images-that-teach> you'll see a screenshot (4th one from the top) where it's disclosed that a Dr. Tell admits the meters he tested for Itron, **were only tested for functionality, or their ability to transmit data, and were never tested on humans or animals.** This is just one form of meter by one company, but I suspect this is true of all of them.

At this link you'll find a really good 5+ min video on "dirty electricity" by the son of Dr. Martin Blank, a huge contributor of knowledge to our subject: <https://www.shieldyourbody.com/dirty-electricity/> And here's a good summation and visual from his site that confirms what I described above. In the image below, where he shows a plug, that should be an electronic meter in my description, but you get the point:

The creator of the site above then goes on to ask and answer, Where Does Dirty Electricity Come From? "As a baseline, let's think of regular old 'clean' electricity as smooth. Just as electrical wiring and the power grid can conduct electricity from the utility company so can it conduct other electrical signals and other forms of EMF. Two types of this unwanted EMF include transient voltage and wireless gadgets. It is these forces that convert 'smooth' electricity we expect into unpredictable, 'dirty' electricity. And once these forces are created, they spread throughout a building – and even to other buildings – over the electrical wiring and power grid, radiating potentially harmful EMF into our environments."

Part of the "process" of inserting this now electronic/digital technology between the powerlines and our homes, offices, schools, hospitals, nursing homes, they refer to as "stepping down" the voltage from 220 volts coming on the powerlines to 4 to 10 volts. Nice little term they have there "stepping down" but in functionality, this is like putting lightning in a box and is what you see in the above image on the right. Smooth on the left coming into these new meters of many brands and designs and DEADLY after it passes through their meter, BUT THEY DON'T WANT YOU TO KNOW THAT because they'll have to correct a very expensive mistake they made!

Another reported problem has to do with what's called a "switch mode power supply". It's the program that switches the devices from DC or direct current to AC or alternating current. In these meters it does this over and over and over. I would assume with my somewhat limited knowledge that it's this process that creates the dirty electricity and that the meter won't work without it. The same is true for an inverter on a solar system, it converts to AC from DC and when it does it produces high levels of dirty electricity.

You also need to know that the utility companies constantly misrepresent facts and tell people that their meters only send data 4 to 6 times per day. That detail may be true as far as reporting our usage, but they left out some pertinent details as these meters are in CONSTANT communication with the system at large. The system asking of the individual meters, "Are you there? Everything okay?" The meter then replies "I'm here." According to one lawsuit this takes place anywhere from 9600 to 190,000 times per day! You can view this information on page 5 at the following link: <https://docs.cpuc.ca.gov/eFile/RESP/149398.pdf>

The kind of metering system in use here is questioned on one site as being "the worst form of smart meter" known as a TWACS (Two Way Automated Communication System). Details about this "power line communication" (PLC) system are worth noting from this source. The site goes into the wired and wireless versions, and both are worth knowing about because if you call the utility company, they love to trip up the callers by making them think they don't know what they're talking about. <https://smartmeterharm.org/2016/04/23/warning-twacs-the-worst-smart-meter/> "Ours isn't a 'smart meter', no it's some

other term they gave it like “Advanced Meter Initiative or AMI” which is still a piece of electronic gadgetry of unknown safety with a very questionable existence. “Ours isn’t wireless” if you mention being concerned about “wireless meters”. And again, these hardwired one’s are questioned as being “the worst” so “ours are hardwired” or “carry data over the powerlines” doesn’t mean they’re safe and have no issues. They’re playing mind games with you to make you go away and stop asking questions. I’ve found that they WILL NOT engage if asked about the dirty electricity measured at the outlets and then they get ugly and intimidating in behavior if you go there. Most people never get past this initial phone call and limp away from the conversation. That’s why I’m writing you a book to teach you what they won’t tell you so we can change this.

That site also details how it “contaminates” the powerlines with constant pulses. Other EMF remediation specialists commenting on this kind of TWACS/PLC system have pointed out that the powerlines were designed to ONLY carry electric current. Using these electric lines to now carry data, which they point out ‘has an inherent whine’, could explain the 24/7 high-pitched squeal in the air here. She shared, *“The Austrian Chamber of Physicians (equivalent to the American Medical Association) and the Swiss Physicians for the Environment were so alarmed about widespread health effects from PLC that they opposed it at the federal level in their countries. Effects can be immediate as well as cumulative. Reports from states that have this indicate this is potentially deadly, with the most vulnerable feeling the effects soonest.”*

After the last death, Candace Sexton, who worked for many years in the same building as the 2nd death, the “letter to Jasper” was expanded and distributed throughout town again. To the official offices noted below and we also included a \$150 meter to take readings, a \$35 filter just for demo purposes, and 2 small books by highly credentialed experts to support the accusations. One booklet is by an MD; epidemiologist, and the other author is a retired microwave weapons expert. The packages were presented to the Fish and Game Office, the Newton County Judge, Warren Campbell, and the Ozark National Forest Office here in Jasper. Later this package was mailed to The Newton County Health Department and followed up with emails sharing more developments and concerns. June 20th, 2022, I received an email from their office that “we have decided to share information with the doctors in Little Rock over us”. For clarity, this means that Dr. Jacky Dunn, Chief Health Officer of Newton County Health Department decided it needed to be reviewed further with the doctors over the county health office. THAT should matter. Sadly, Dr. Dunn got sick shortly after that and passed away before doing so, but he did deem the information worthy of further review.

PubMed article: **Evidence that dirty electricity is causing the worldwide epidemics of obesity and diabetes:** <https://pubmed.ncbi.nlm.nih.gov/23781992/> Or you can search the entire site on “Dirty Electricity” <https://pubmed.ncbi.nlm.nih.gov/?term=dirty+electricity>

The meter readings in this house, our neighbors, and other buildings in town would be considered “dangerous”, maybe DEADLY is a better choice of words. So, when Lesa Tanner Massengale, of Bob’s Do-It-Best Hardware, was found crawling on her knees and didn’t know who she was due to 5-8 masses (differing accounts), on the same side of her brain as an electric outlet, which was unusually high up on the wall, even with her head while sitting at her desk, **I went to take readings! Ideally this reading in the electric outlet should be around 30. No reading above 50 is acceptable on a “Stetzer” meter and “must be filtered” is what the package reads.** This meter measures voltage surges or “line noise” riding in on the 60 Hz smooth sine wave electric current from the power line. It’s been around since the mid-70’s and measures what’s commonly known as “Dirty Electricity” considered “very deadly” by Dr. Sam Milham, author of Dirty Electricity... <http://sammilham.com/> Remember the opening line of his book reads, **“I am writing this in a desperate attempt to warn you.”** One of these books was included in the package.

The readings taken in the hardware store here in Jasper started in the 1500's, jumped to 1900's then exceeded the limits of the meter which is 2000 GSU's (Graham Stetzer Units). I went next door and found the same to be true at the lumber yard, the grocery store, the physical rehab building next door was lower, but they weren't open which matters, but it was still over 1000 on the front porch. Another longtime local took the meter and measured their home (it was high) and then took it downtown. He came back very discouraged reporting "the Courthouse is high...the...well, **every building I checked is high, but I don't know what we can do". He looked very disappointed. I shared that if the utility company claims to be "member owned" then that says the members get a say BUT then you'll also find that according to many locals and a somewhat recent lawsuit I found online, CECC locks said members out of public meetings and changes rules to control who gets on the board. **This is deadly, criminal, immoral, illegal behavior and is NOT the way people treat each other or God's creation.****

The 24/7 High-Pitched Squeal It's Not Tinnitus!

As for the 24/7 high-pitched squeal in the air here, it's not tinnitus because it never varies in tone or consistent presence, only in density of presence. I didn't notice it for the first two months, now I can't NOT hear it. When I began inquiring, many locals say they too hear it and that it began immediately after they installed these new electric meters here. One local man was zealous in his answer and almost angry about how it wakes him up and how he's noted that his health has really headed downhill "since I moved into that house..." I have not checked his home readings, but someone should. I estimate that one-half of the people I've asked hear it. Some seem not to notice until it's pointed out and then realize they are hearing it. It can sound like insect background noise but more invasive and "tinny" sounding.

I was able to find a 70-year-old Chief Inspector for the Board of Electrical Examiners and Licensing in Little Rock, Dept of Labor, Charles Covington, who stated very zealously, "If y'all are hearing that it means there's a problem!" He told me that his office "doesn't have any jurisdiction" but said that he would call an engineer colleague at Carroll Electric and ask him to come check on this. A year later I let Mr. Covington know that nobody has been in contact in any way shape or form. He again requested the matter be checked into and when I spoke to him again in September 2021 and learned that he was retiring October 1st, I told him that I'd been sharing widely of his declaration that there's a problem up here and asked if anyone had confronted him on that. He laughed and replied, "Yes they asked me why I would tell you such a thing" and with gusto he said, "I told 'em **'BECAUSE THERE'S A PROBLEM UP THERE!'**" He never backed down and I do find it disturbing that whoever was questioning him wasn't concerned about public safety but wanted to know "why he would tell me that "there's a problem". He gave up the name of the engineer he'd contacted twice as Randy Hooten. He seemed a little angry that Randy and CECC had done nothing and since he was retiring apparently felt no obligation to protect them any further. **I'm certain this is an inconvenient issue so CECC would just rather not bother, but that's not an option as I see it. Intelligent, moral, caring people pay attention to safety meter readings especially if they are the emitter!**

There's a link on the "no more towers" site titled, "This is not 'tinnitus of unknown origin'! It's microwave auditory effect. We're actually hearing frequency in the air known as Vibroacoustic Disease or VAD. I don't understand why it has to be called a "disease" since those of us hearing it aren't "sick", it's an environmental noise pollution created by their metering system! I will say however, it's this article that has me concerned for my long-term health due to this "squeal" as it discusses how damage was found at autopsy on someone subjected to this. "In 1987, the first autopsy of a deceased VAD patient was performed. The extent of LFN (low frequency noise) induced damage was overwhelming, and the information obtained is, still today, guiding many of the associated and ongoing research projects. It then goes on to talk about "Assault by High Frequency; a Tortured Life, a Tortured Death". In fact, that's what the Chief Electrical

Inspector said of being subjected to a “24/7 high-pitched squeal” I called him inquiring about. “That’s a form of torture”.

This article goes on to talk of how microwave radiation exposure opens the blood-brain-barrier and causes cataracts. **“Full Spectrum Dominance”, which according to the image is a “U.S. Mariana Islands military exercise for bombing and firing practices causing the death of 81,000 dead whales and dolphins every year... We are assaulting ourselves, each other, and the planet with both low frequency and high frequency noise. Decision-makers are now extending an attitude of entitlement and manifest destiny out into space. Ocean Full Spectrum Dominance is next.”** <https://www.naturalblaze.com/2021/10/5g-emf-rf-vibroacoustic-disease-microwave-hearing-beam-forming-this-is-not-tinnitus-of-unknown-origin.html>

Another website has a short article on the subject of microwave hearing.
<https://radiation dangers.com/2018/04/26/microwave-hearing-ringing-in-the-ears-and-tinnitus/>

“24/7, I hear an incessant, mosquito-like, metallic hum and I am certain that what I am hearing are the alien and destructive artificial frequencies now running through the entire power grid and through every inch of air space on Long Island due to cell towers, microwave antennas and transmitters, satellites, wifi routers, smart meters, etc.” <https://radiation dangers.com/2018/07/26/is-it-tinnitus-or-is-it-microwave-and-or-ultrasonic-hearing/>

Another reference book, Public Health SOS...on page 55 shows where “Microwave Hearing” appears on the EMR spectrum. https://www.amazon.com/dp/1441458794?psc=1&ref=ppx_yo2ov_dt_b_product_details

The book, The Invisible Rainbow – A History of Electricity and Life, by Arthur Firstenberg, has an entire chapter on “hearing electricity”. <https://www.cellphonetaskforce.org/>

I just read in the **20/21 Hunting Guide for Arkansas** that the Chronic Wasting Disease showed up in the white tail deer here in 2016. I found the following article where Carroll Electric reported being at 55% saturation with these new meters by 2012: <https://www.carrollconews.com/story/1757754.html> This link has been removed now but I likely still have it printed in my files but simple enough data to remember. They were at 55% coverage by 2012! I wonder how much they’d completed by 2016, maybe 75% coverage or more? Most locals say, “The Chronic Wasting Disease came from the infected elk herd that was brought in” and tend to end the conversation there but let me show you the rest of the story when you include the new electric meters. You’ll note in that microwave symptom list graphic that this stuff causes “Immune Abnormalities” in the human population as well as neurological issues and more that could explain this transmission of disease, even from a gut health perspective since it causes fungus to be 600 times more active according to Dr. Klinghardt in this video about half way through: <https://www.youtube.com/watch?v=8RP7vmFeo0k&t=20s>

Continuing... This “electric grid” is actually a “created field of electric current”. Or as Professor Curtis Bennett of Thermoguy.com says “a microwave grid and every living thing is in it”. Every bit of our wildlife and humans are IN IT 24/7! If it suppresses the immune system in humans, I expect it would do the same in wildlife. So now the white tail deer are subjected to a 24/7 high-pitched squeal, which would induce stress, which creates health challenges of many kinds, AND they’re also in a field of electromagnetic radiation or non-ionizing radiation AND their immune systems are subdued. ***Then*** an infected agent (Elk with CWD) is introduced into their environment. If you want to get deeper you can read about “resonance” how disease can spread through resonant frequency in The Truth About Contagion or research the Covid-19 or 5G categories here: <https://neighborsorganizingagainsttrespassingtechnology.blog/category/covid-19/> but that would just confuse people so let me just ask, “Wouldn’t it make sense that this would make the white tail deer population more vulnerable to disease than if they weren’t standing in an electric grid? What if curing the CWD was as simple as returning to analog meters and having us call in our readings.

At this link you'll find screenshots including an image where a local man stated that his **"studies are ongoing but do show a correlation between these new meters and CWD"**. I'm not the only one! I got booted off of the page and the post deleted but not before I got the incriminating screenshot: <https://nomoretowersintheozarks.org/images-that-teach>

Corporate Bullies!

At that link you'll also see a pm from a 90-year-old woman who, like us, had to flee from her home of 54 years because her 62-year-old daughter couldn't handle the smart meter Nicor Gas was going to install on their home. **"What needs to be told is how we legally tried to stay in our house, but Nicor gas Co could legally put a condemnation on the house if they shut off the gas because of the new meter etc."** Is this what we want happening? *Are we going to let utility companies drive people out of their home because they can't tolerate some new-fangled technology?* Her description of their precious home that had been set up with special varnish and paint and filters and then a corporation comes along with new tech that makes her daughter sick. I'm appalled! IS THIS WHAT 'WE THE PEOPLE' WANT? Do you understand why WE THE PEOPLE can no longer allow this?

All living beings/organisms are electrical in nature and are therefore affected by electrical fields, magnetic fields, and radio frequency. Our cells are electric. Our blood even has electric aspects to it. Our brain, our heart... Nature is electric so if it's affecting the humans, it's affecting everything! Most people don't feel the EMFs, so they don't know to get away from it but then they end up with any number of symptoms found on the chart below; things that send them running to the ER/doctor, or they simply drop dead if they have a certain genetic disposition and it's recorded as a "heart attack". **Nobody ever thinks to question how many towers are around the patient or what kind of electric meter and subsequent readings are found in their environment, though ALL of this tech is new to humanity and should be among the first things to consider!**

Of interest, a few homes that have been checked aren't in the extreme readings like some but there's no way to know until you take readings. EVERY PUBLIC BUILDING CHECKED HAS HIGH READINGS! Discussions lead to the conclusion that it may depend on how the home was wired, and by whom, following mentors instead of code, which is very common among humans. With electricity, that isn't smart, and the homeowner has no way of knowing they're in danger. **It certainly seems like wiring abnormalities were much more forgiving when analog meters were in use, which is a blatant clue to the most inexpensive and immediate remedy, a return to analog meters.** As for the idea that they are "NECESSARY to eliminate meter readers" it seems to me that I recall sending in a postage paid card monthly with the numbers of the meter for a decade while living rural. Again, if we can call in millions of votes for America's Got Talent contestants, I'm pretty certain it would be feasible to call them in on a phone system, or to report them via an internet-based system. A picture can even be taken and sent by email every 6 months as a form of audit.

How my activities are limited: I can't enter any buildings here so I can't shop, go out to eat, go in the post office or even the courthouse, to the hospital or ER, can't visit friends in their homes. I am effectively blocked from access to a dentist, a chiropractor, a massage therapist by these forced electric meters! I could ask other patients and providers to turn off their cell phone and WIFI, but I can't do anything with these electric meters here. I haven't left a restricted area here near our home since February of 2021 and as of September 2021 I no longer ride to the dump with Mom, due to two new towers south of town. I can't even ride from Hasty area to Western Grove due to a new tower that came in after arrival.

Because people don't yet understand that we should hardwire instead of using WIFI, put their phones in faraday bags to protect themselves, their family, friends, and even their pets, and change out these

garbage electric meters, I can't live my life! I can't even go to the doctor with my 86-year-old Mom with whom I live. If she were to have a medical emergency, I can't go to the hospital with her! **There are only 8 low EMF hospitals in the entire world because we're that ignorant about all of this.** This too means that a trip to the ER for me personally would likely put me in cardiac arrest or cause a stroke. Remember the statistics shared earlier on how many people are having strokes and colorectal cancer from carrying the phones in their rear pocket, and how young they are. God forbid you should have an electrical implant in your body now like a pacemaker. Of interest, they built 3 new Memory Care Centers within 10 miles of our home in Texas within a few years, never making the association of mental inability to the rampant rollout of new technology. We had 112 towers and 23 antennas within 4 miles of our home. The recent average is over 300 towers in a 4-mile radius and I'm reading a book where someone had 500. Hello?

Contaminated Powerlines

In Austin, TX, out my bedroom window was our neighbor's digital electric meter. Sadly, she was willing to change it until someone at PEC (Pedernales Electric Co-op) essentially told her "It's not the meter, it's the powerlines." I'm betting the idea was to indicate a "greater good" mindset while making my "issues" of lesser concern, and yet why should we take the word of a utility company employee? How can he in fact know the lines aren't pumping out high levels of radiation as was the case in this article. It took a lawsuit by amateur radio operators and a judge ruling on items of discovery to find it in one case and in the link below: <https://www.activistpost.com/2018/10/doctors-notes-testimony-health-concerns-duke-energy-ami-smart-meters.html>. It's almost at the end of the article it reads, "In 2016, there was a news report out of Greensboro about a Lake Daniel, North Carolina neighborhood whose residents were sick and Duke Energy officials actually admitted that their power lines were emitting a high level of radiation." Reportedly, PG&E is now being sued for their part in the California fires that burned out several towns because they knew they had a problem with their lines but failed to act. So, are we supposed to just believe every utility company or tower company who says "It's not us" or should they have to prove their meter, tower, or product is safe, tested in its true environment by a Citizen's Watchdog group? **They should continually need to establish safety and face severe punitive actions for any issues? Again, go do a general search on the internet for "power lines emitting high radiation" and see what you find. THIS is a very old debate again, "being perpetually looked into."**

Remember, if the air here is literally screaming, then another possible explanation beyond the data having a squeal, is that the powerlines are emitting high levels of radiation, or both. This happened in another area and the only way they found out the lines were radiating unsafe levels was a result of discovery in a lawsuit by amateur radio operators who were finding interference in their communications. If you look at the Images That Teach category in the NoMoreTowersInTheOzarks.org site, you'll see where some friends reported their hair standing on end as they headed south out of Eureka Springs, Arkansas recently. They were driving parallel to the powerlines.

Stray Current

THEN, August 1st, 2018, my sister and I were returning from dinner on Slaughter Lane in Austin, TX, approaching FM 1826 when I was literally stung on my big toe for about five or six seconds by a rogue electrical current while driving down the road past a subdivision where I suspect every home had an "advanced" meter. When I let out a yelp my sister inquired and then shared that the same thing happened to her on the way out to dinner that very night. She felt it under her big toe about 150 yards east of where I started feeling it. My sister does not have electro hypersensitivity either!

I came in and called our mother to share what had happened to us and she said it also happened to her the day before while she was in HEB grocery store at the Y, TWICE! She thought a scorpion was under her pants leg, which was my sister's wording too. She shrugged it off to old age and then a few minutes later it happened again. This is the same store I had to leave because of the WIFI and two huge antennas nearby. Wonder if this is why the store manager has a brain aneurysm because I can certainly feel my temples pulsing over there? Intense energy in there could easily be measured with meters instead of ignoring the messenger or assuming I'm crazy!

THEN, I was talking to a local business manager about it, and he zealously questioned, "That's what that is? I'm being stung like crazy and had no idea what it was." It's an oil-change place and when I go there, I can actually feel the sparks in the air. Finding **Dr. Ritter** in Austin, TX was another affirmation that I'm not crazy. <https://EMFKnights.net> He's a pediatric neurologist who started researching when he couldn't get his patients well and wondered why. He quit his practice to do EMF detection and mitigation because it's more relevant to their health than examining them at his office and returning them to the toxic home! On a national level you can check with <https://EMF-Experts.com>.

THEN, I was talking to another local business owner, and he shared that he's feeling these zings and stings and blurted out quite loudly, "Oh my God, these are converging currents!!! You can't put all this stuff out here like they're doing and not have any backlash."

All events described above, about being stung by stray current happened within a 5-mile radius.

Adding Insult to Injury – Here Comes 5G

<https://www.5gspaceappeal.org/the-appeal>

"Despite widespread denial, the evidence that radio frequency (RF) radiation is harmful to life is already overwhelming. The accumulated clinical evidence of sick and injured human beings, experimental evidence of damage to DNA, cells and organ systems in a wide variety of plants and animals, and epidemiological evidence that the major diseases of modern civilization—cancer, heart disease and diabetes—are in large part caused by electromagnetic pollution, forms a literature base of well over 10,000 peer-reviewed studies.

If the telecommunications industry's plans for 5G come to fruition, no person, no animal, no bird, no insect and no plant on Earth will be able to avoid exposure, 24 hours a day, 365 days a year, to levels of RF radiation that are tens to hundreds of times greater than what exists today, without any possibility of escape anywhere on the planet. These 5G plans threaten to provoke serious, irreversible effects on humans and permanent damage to all of the Earth's ecosystems. Immediate measures must be taken to protect humanity and the environment, in accordance with ethical imperatives and international agreements."

20,000 5G satellites in low orbit will irradiate every square inch of the Earth

5G is radically different from previous generations of wireless technology. Instead of emitting hundreds of watts of microwave radiation, *each 5G antenna on the sidewalk will emit beams with an effective power as high as tens of thousands of watts of millimeter wave radiation*

With your help, stopping 5G is possible.

Go to www.5gSpaceAppeal.org and add your signature to the hundreds of thousands who've signed.

At this link, you'll see a 24-minute video about **4 babies born without hands, nine months after a 5G tower was installed nearby in Germany**. You'll also learn about reproductive issues on a well-established cattle breeding ranch where calves are born without hair and other deformities and didn't survive. <https://neighborsorganizingagainsttrespassingtechnology.blog/2020/06/09/4-babies-born-without-hands-after-a-5g-tower-installed-nearby/>

Here you can read about **two cases where non-verbal children began speaking after being removed from wireless exposure for 3 days**. <https://neighborsorganizingagainsttrespassingtechnology.blog/2020/12/05/non-verbal-child-speaks-after-3-days-w-o-wireless-exposure-2-cases-in-story-below/>

Another site that has a lot of good 5G information is: <https://radiationdangers.com/5g-roll-out/1644-2/>

“There is No Safe Level of 5G or Wireless Radiation for People or the rest of Nature. Did you know “5G” is a marketing term? The real agent? MICROWAVE RADIATION! Even though we can't see it, radiofrequency/microwave radiation (RF-MWR), is a hazardous, xenobiotic (foreign-to-life) agent, and a significant source of harmful environmental pollution.” And they plan to spray the Earth with this from space via satellites. What could possibly go wrong? <https://zero5g.com/>

Here's another confession article: [Wireless Industry Confesses No Studies Show 5G is Safe!](#) And yet, it's being rolled out in mass with zero consideration for the health effects to humans OR the environment and they're even planning to spray at the Earth from space now. What an insane, irresponsible disregard for life. You absolutely need to read Chapter 10 of that Hidden Dangers book. It isn't noted in the table of contents but that's where you'll find the 5G information. Another good site is [RadiationDangers.com](#).

Here's the 5G category on NoATT.blog site:
<https://neighborsorganizingagainsttrespassingtechnology.blog/category/5g/>

“Prudent Avoidance”

So, the number one rule to getting well is “prudent avoidance”. Before moving to the Ozarks from Austin, TX where they'll put a cell tower on your head if you stand still long enough... I'd gotten rid of my cell phone, and my mom spent **thousands** of dollars on healing the wiring inside the home, we got a modem that doesn't even have WIFI capability because the one provided by the cable company came back on when they assured me it couldn't. I was cooking for 3 days before I saw the blinking light. We hardwired, grounded, and shielded our computers, changed our meter to an analog, yet I still had a Wi-Fi signal measurable inside the home. WIFI routers in your neighbors' homes are putting out a signal that's 97% stronger than needed to provide them internet. This is why you can see many networks on your phone or wireless devices available to you if you just knew their password. You can either hardwire or you can at least buy a Signal Tamer bag through LessEMF.com but you **SHOULD** do something instead of nothing.

Incentives to Change?

Here's a little snippet of information that might help you see where we are in this country. **“The US makes up 5% of the globe but consumes 70% of the global Rx drug supply; 80% of the opiates. In spite of this we are in last place for life expectancy compared to seventy other economically equal countries according to the 2014 Social Index Report that you can see online.** We all bought into the idea that we needn't be responsible or wise in our eating and living because we were told our government agencies were watching out for us and that a doctor could give us a pill that would essentially undo consequences. **So, now we're facing a time when the Baby Boomers, the largest demographic to ever**

go through the system, are sicker than ever and have no idea how to get well or stay well and this is going to create an estimated expense ten times our national debt! Oh, and there's no money set aside for it. In government lingo this is called an “unfunded liability” and it's in the same category with government pensions so when/if the system collapses from all of this insanity, those payments will also stop. This is just ONE reason to learn and apply zealously what I'm sharing with you here. ANYTHING and EVERYTHING that can be done to improve human health needs to be done ASAP and control what we have control over. Here's the title/link to the article that gives the financial forecast titled, **Unfunded Liabilities: The Cost of our Aging Population Outweighs National Debt.**
<https://www.commdiginews.com/politics-2/unfunded-liabilities-the-cost-of-our-aging-population-outweighs-national-debt-12987/#kP50zWBOlc2JHrUr.99>

This year, several locals here in Jasper at the Farmer's Market, who've been gardening for decades, reported that they had to self-pollinate with paint brushes because the bees weren't showing up. When you head down this road of investigation, you'll find an entire world full of experts in science and medicine screaming about the concerns. *A “6th self-extinction” event seems universally expected by them if we don't radically change the course we're on.* Plain and simple it seems to me that humanity is at an epic moment in their own story. **We can write a new ending, but it must be done quickly.** According to scientist George Takei on YouTube, **we've lost 75% of our insects!** Go search YouTube.com for “loss of insects” and you'll see MANY credible people stating this concern. Germany is reporting a 76% loss. Four species of bees in the US are now extinct. [Click here to read: BEES, BIRDS AND MANKIND-Destroying Nature by 'Electrosmog](#) or search it by title. It's a 47-page pdf that should give every human pause. One article titled, The Insect Apocalypse Is Here~ What Does It Mean for the Rest of Life on Earth? On page 6 (when printed) it points out that there have been **several self-extinction events on this planet caused by asteroids or weather phenomenon...THIS IS THE FIRST ONE CAUSED BY HUMANS!** You can view one article here or just search “6th self-extinction and see how many sources are reporting on this:
https://www.nytimes.com/2018/11/27/magazine/insect-apocalypse.html?fbclid=IwAR3vVRV_Fp1MlfyWc59KsHeV88JrPpv4ry6FC0orOxrZNx4cqQsEQ5R-y6M#commentsContainer

Since each state has to pick up the costs of their citizens getting sick or disabled perhaps the cities should be suing Verizon, AT&T, Spectrum and the utility companies who FORCED unsafe meters on their customers...for poisoning their citizens much like the tobacco suits were handled. WE WERE ALL LIED TO! Hopefully, you're reminded now that radiation kills living things.

I've been warning for 6 years that we were going to witness a horror show and nobody will be spared due to status of any kind. It's an equal-opportunity killer. To know that much of it will be VOLUNTARY rather than an environmental disaster is mind-boggling. How will you explain this to your kids and grandkids?

One more very important link: <https://olgasheean.com/no-safe-place/> This is one woman's story of being forced from her home of 27 years due to too much radiation invading her home. Her succinct information on the myths and facts of radiation is worth your time to print, read, and contemplate. It also has insight on how the ADA, Human Rights Commission, and more view this issue and drives home the fact that this is illegal and immoral.

Here's a link about a commercial airline pilot who has “nowhere to escape from wireless radiation”.
https://www.thestar.com/news/canada/2012/10/17/airline_pilot_has_nowhere_to_escape_from_wireless_radiation.html?fbclid=IwAR3N1xO4we6d6FAge6wP3tbXfc3XRwziMiGrdUHsJlXvszV3xKUVgTCLyY

Bottom line, we all went stupid when new technology came out and forgot that we shouldn't blindly trust government and the “world system” which is why our Bible's warned us to stay away from them. Obviously, chronic exposure to non-ionizing radiation is a bad idea but we like “the shiny

things” and think our government oversight agencies were testing this stuff. How naïve of me, and I’d even written a book about their failures in the food, drug, and health arena. In fact, where haven’t they failed? Look at our health stats. ***“We make up 5% of the global population but consume 70% of the Rx global drug supply, 80% of the opiates, and yet we aren’t healthier...We’re in “LAST PLACE” for life expectancy among 70 other economically equal countries and our infant mortality rate was worse than Cuba during 2 quarters of 2014, if memory serves me well.*** We need to stop believing everything handed down to us without checking. When did we forget that the federal government is usually not the friend of the common man? What we are doing clearly isn’t working so it’s time to take a serious look at what we’re doing to contribute to our own demise.

We are living in a SOUP of “non-native” electromagnetic field radiation of our own making. The density of airport and military radar alone exceeds your imagination. **An intelligent species would be measuring things with safety meters and adjusting their course according to the data.** Available meters range from many consumer-level options to meters so large they cost \$20,000 and require a truck to move them and four men to set them up, but nobody’s checking. Those writing the permits are trusting the FCC and that’s a **BIG MISTAKE** confirmed by that Harvard Ethics report detailing who was paid and how much and how our FCC is now made up of wireless industry executives. Remember that Robert F. Kennedy, Jr lawsuit against the FCC and on August 13, 2021, where the FCC was rebuked by a Federal Appeals Court judge in D. C. specifically for “ignoring studies on harm” and ordered to immediately pay for the 11,000 pages of evidence of harm submitted by the plaintiffs? It included an Amicus Brief (statement by people not “parties” to the suit and **includes a statement by 57 doctors who have 3000 patients with this condition and report that it used to be a minor part of their practice but has now become the dominant issue.**

For a further education go to Facebook and read stories of people suffering from electrical sensitivity issues:

This link has an exhaustive list of internet links related to EMF issues. When printed it’s 14 pages:
<https://www.electrosensitivity.co/links-1.html>

What will it take before WE THE PEOPLE begin taking steps to correct our course?

I enclosed a paper catalogue from **LessEMF.com** with the package sent to local overseers. It's a company who sells a lot of the safety products I used to create a safe computing space and a great learning tool. The first one I requested in late 2016 boasted on the front cover "Celebrating 20 Years", 26 years now! I couldn't help but wonder why the powers-that-be didn't feel compelled to tell consumers we needed to be using hardwire options, grounding, shielding, and filtering products on all these new tech gadgets if they've known for 26 years! Nope, they brought in MORE wireless and not one single commercial for warnings and public service information AND they pulled jurisdiction from every oversight agency, so they essentially sent all the sheriff's home so there's nobody to report the crime to and the rollout continues.

A single peanut, a little shellfish, or a bee sting can kill some people; we are not all the same. Those who have Multiple Chemical Sensitivity are also typically more "sensitive" to electrical current and mold. Some of us can't chelate toxins produced by exposure/s as readily as other genetic types, and we now live in a world that's full of them in many forms, chemical and electrical. In the book I included some relevant information, **"each year a total of 9.5 trillion pounds of chemicals are manufactured or imported into the US, which translates into 30,000 pounds per American."** This has never been done before so we shouldn't be cavalier and intolerant when someone says "I don't feel good around that air freshener gadget" or similar events. We have polluted our world and should EXPECT some feedback. Instead of mocking the messengers it would be wise to seek their counsel.

Previously shared, the National Institutes of Health (NIH.gov) link, "...As stated during the international scientific consensus meeting on EHS and MCS that we have organized in 2015 in Brussels, scientists unanimously asked WHO to urgently assume its responsibilities, by classifying EHS and MCS (multiple chemical sensitivity) as separate codes in the ICD; so as to increase scientific awareness of these two pathological entities in the medical community and the general public, and to foster research and train medical practitioners to efficiently diagnose, treat, and prevent EHS and MCS—, which in fact constitute a unique, well-defined, and identifiable new neurologic disease. You'll find that information here:

https://www.ncbi.nlm.nih.gov/pmc/articles/PMC7139347/?fbclid=IwAR1DrLjrNI-Am9mUaaq-8MiGyL7pAPl_y8SJDMpi635548J6MP0lhrsXFgQ

Love Thy Neighbor?

There were 2 of us with this condition in this area when we moved here. A friend who does a lot of home repair and maintenance here now reports that he knows 8 people in the area with Electromagnetic Hypersensitivity. Another one rented a local cabin the very week we came to see/sign on the home purchase here according to a cabin rental owner. People are literally looking for escape from the electromagnetic smog in the cities. I already know of people living in metal sheds, and some in their cars because the saturation in their living environment has become intolerable. Three women I know have become homeless due to lack of suitable living options. **Many pets are also having seizures and getting cancer most likely from what's known as "dirty electricity" or line noise coming into homes from these new-fangled electric meters being deployed all over the world.** NoMoreTowersInTheOzarks.org aka TheTruthAboutTechnology.org has an Images That Teach category you should check out. You'll see several screenshots showing how people's pets responded to the installation of one of the electronic utility meters. For those who don't believe the meter readings I ask, "are the animals crazy too?"

<https://nomoretowersintheozarks.org/images-that-teach>

Once you understand the nature of this, you'll understand we are all "sensitive" to electrical current and radiation, no matter how subtle. We are highly sensitive electrical beings with a subtle energy field that radiates out around us for at least 6 feet in every direction. Have you ever FELT anger on someone just standing behind them at the bank or in the grocery store and didn't understand why? You're feeling what's IN their energetic anatomy. You may feel JOY coming from someone too. We are energy beings in physical bodies so we're ALL being affected. It's a matter of not recognizing the source of the diseases related to 'CHRONIC EXPOSURE TO NON-IONIZING RADIATION'.

THIS has never been done in the history of humanity. There are no ancient metal towers with antennas and transmitters with microwave drums on them, and electrical appliances inserted into wiring system, so we better be measuring the outcome of these new choices we're accepting and make some changes, NOW!

Some neighbors recently reached out. They've lived here many years. Jim heard my story and a few months later his wife called asking if they could borrow my Stetzer meter as Jim wasn't "feeling well". I loaned them the Stetzerizer meter, and they found very high readings in their home. I loaned them a few \$30+ plug-in filters I bought online with instructions, and they reported an immediate improvement. Jim felt better and both were sleeping again and had been unable to do so for several months, since expanding his solar panel array. I saw him in town a few weeks later, after they too installed a SATIC filter on the electric panel like ours. With a very sincere look Jim said, "..., **what I felt was not good. It felt very dark...**". Ellen later used the word "agitated" to describe Jim's behavior, a man who is generally very happy and upbeat. He then went on to say, "Now I'm wondering if this has something to do with both neighbors by me getting a divorce." My reply, "Uh huh. You felt the same thing I felt on day 3 in the new house here."

I then spoke to another neighbor a few doors down. His wife just "basically sat down five (now 7) years ago and quit being a wife in every regard" shortly after the meter was installed. They are now divorced, and he was sporting a fresh scar down the front of his chest, describing open heart surgery. These meters affect the heart as you'll see in the Digital Electric Meters category of the "no more towers" site. I didn't take measurements in his home but did make the mistake of walking into a little cabin on the place. From a 1-minute exposure I can tell you that I expect I'd find very high readings there. It was a few hours later before I no longer felt the effects. It should be investigated but has now changed owners who live out of town. I also met a shop owner on the downtown square who owns a business, and his living quarters is upstairs. He's 55 years old but has a \$180,000 pacemaker in his chest. He reported having two major heart attacks before this. The new electric meter was installed before these cardiac events occurred "out of nowhere".

Another downtown store owner, prior to Diamond Real Estate, reported that she'd begun having migraines. I was in her store about 15 seconds before I HAD TO flee. Talking to her neighbor about this he mentioned his opinion that he felt there was "something wrong with her because people would come out of her store crying". **THAT** is a "fight or flight" reaction triggered by non-ionizing radiation, EMF's, dirty electricity...radiation! Whatever name you call it, **there was nothing wrong with her or the people who entered her store...it's the sick building wiring from these toxic utility meters forced on members of a member-owned cooperative corporation.**

I loaned a meter and a plug-in filter to a woman who's a vendor at the Farmer's Market. She took it to their travel trailer and ended up putting one of the plug-in filters in an outlet and reporting that her "husband was nicer" and he was bobbing his head in agreement behind her. (Remember those divorcing couples?)

Then there's the little boy I met. He spent the first 3 1/2 years of his life in the hospital and now eats through a tube/machine. He's 10 now, which means he was in utero when these new electric meters were

being deployed, and already at 55% coverage in 2012, his year of birth. I have not measured their home's outlet readings but if you want to see what DNA damage does to someone, look at precious little boy. The blueprint got messed up and that's what RADIATION does. We can call it "EMF's" and "Dirty Electricity", but we all recognize mutations from manmade radiation are a real thing. Look up the aftereffects of Chernobyl on YouTube. **We are playing with things we don't understand as if we do!** Keep in mind that I've only been here two years and have been very busy with our own efforts to settle in, so I really haven't had much time to meet many people. I can't imagine what my educated-to-the-issue eyes would see if I were to go looking but someone had better get up to speed and respond.

The Battle for an Analog, mechanical only, non-transmitting, Electric Meter

First, sources for analog meters do exist even if the utility company says they don't! I have one here I bought online for installation when we win this illegal, immoral, battle. If there aren't enough available, then let's build them. If local people don't want to work, as is often stated here, I can assure you there are a lot of people who would LOVE to live in the Ozarks if they had a job. We don't have to go crazy with industry, just build analog meters and that's all.

For the record I have not found CECC (Carroll Electric Cooperative Corporation) to be kind, compassionate, lawful, or trustworthy which is one reason I'm taking next steps. Finding locals who tell zealously of them locking "members" out of public meetings and changing rules to control who gets on the board, and that the high-pitched squeal started right after they began installing these new meters, along with the few years of reading and hearing of other people's experiences with these lawless entities leads me to distrust them. Early emails indicated that they weren't going to be an exception. **I am not qualified to know if I'm being bamboozled by them**, so I didn't take them up on their offer to bring their meters and check the inside and outside. And the ADA (American Disability Act) even states that I don't have to have any conversation with someone about the validity of my condition. Certainly, if this is a "new" thing happening to people there's a very good likelihood that the "ignorance of the able bodied" could thwart justice and compassion. Those are the actual words in the ADA Amendments of 2008, "ignorance of the able bodied" in reference to preventing the disabled from being accommodated. She doesn't understand my disability and it's not my job to educate her. BTW: There was barely anything plugged in here when I found the dangerous readings in this house as we had just moved in. I spent 17 days in the RV and couldn't come in the home unless the main breaker was turned off. I owned a few of my own meters and the one measuring what's coming inside through the electric outlets is so simple a six-year-old can do it. Then, the rest of the story began unfolding with our too young to die ladies dropping dead every December.

I'm convinced, as many people are, that our electrical habits indoors were much more forgiving before they began putting these new meters in place; "stepping down" 220 volts to 4-10 volts with their "DEVICE". What could possibly go wrong? These are not people I expect to show up in a good faith effort to help and I frankly didn't want them on our property after I suspected them of giving false information about how many times a day the meters transmit, and other predictable behavior being seen by many of us who share this mission to right this wrong. As well, I presented a "Letter of Medical Necessity" from my treating physician, who's a University of Texas graduate MD, Functional Medicine trained and has attended EMF Medical Conferences. She's not some hairy legged naturopath girlfriend who works from her home just doing me a favor. Her letter gave my status as her patient, my EHS diagnosis, and that I could not have this form of electric meter in my environment. The staff attorney for CECC in Berryville, Arkansas wrote in response asking if my doctor was also an electrician and if so, she'd like to see her credentials. She also asked how my doctor is supposed to predict my reaction to a meter she's never seen or tested. She then downgraded my treating physician's diagnosis to a "mere medical opinion" and has yet to address the high readings being found all over this town, or the deaths in those toxic buildings. They also didn't send Randy Hooten or anyone else to investigate when that Chief Inspector in Little Rock, Arkansas asked them twice to do so. Two further inquiries about the country of origin for all components

inside the meter were met with incomplete answers and a “you ask too many questions” letter. So, I bought one of the meters on eBay, took it apart and chased down components inside online. Sure enough I found what I think is a capacitor and the country of origin is China. The company made a strong effort to appear “American” as there are NO foreign letters on the product. I have a picture around here somewhere.

It seemed to me like she took the position that I needed to prove to her that I have this condition and instead of writing my doctor with her questions as the letter instructed, she seemed to take pleasure in writing me a hostile response. She’s a lawyer, not a doctor and would have an obvious biased input in this situation. Would she want me to get up from a wheelchair to prove I can’t walk? Again, is this how WE THE PEOPLE want to treat people who have become disabled by the hordes of new technology and in ignore-ance of the WHO diagnostic code? Is this the way we’re going to regard others now? What about The Golden Rule, “Do unto others as you would have done unto you”. **Certainly, if we’re having a “worldwide epidemic” as the NIH link above shows I think it’s reasonable to accommodate those who are suffering** from human corruption and ignorance. When we know better, we do better. IT IS TIME to do better. The following link gives ADA information but WE THE PEOPLE are going to have to FORCE some changes. The good news is that there are already laws in place to stop what’s going on so all we need to do is act on them: <https://smartmeterharm.org/electromagnetic-sensitivity/>

One employee of Carroll Electric, now retired, wrote me, “This is better for everyone.” Really? Is it better to just move the effects of new technology unleashed on the world off the discussion table? Is it better if we then further disregard the people disabled by said technologies? Is it better if we just ignore the 24/7 high-pitched squeal, dangerous readings, and the 70-year-old Chief Electrical Inspector in Little Rock proclaiming boldly “there’s a problem up there” twice now? How about the CWD and the absence of the bees? Exactly who is this better for? Is it better for the children and pets in these homes? I’m a paraplegic asking for a ramp! I’m a voice for those who can’t speak or don’t know what’s happening to them and those they love. One local woman, 34-years-old said, “I’ve been on this mountain my whole life and I’ve watched people becoming sickly in recent years.” **Is this truly “better for everyone” Nancy or just for Carroll Electric?**

When I wrote the Arkansas Public Service Commission a detailed letter with 20 links showing the dangers of these meters, details of my disability and the Letter of Necessity from my doctor, I quickly received a reply that clearly indicated the letter wasn’t even read and the links weren’t considered. Here is their reply:

“This email is to let you know that I am in receipt of your written complaint against Carroll Electric. **The Arkansas Public Service Commission does not require the companies it regulates to provide an opt-out for AMI metering.** The company is not in violation of the Arkansas Public Service Commission’s General Service Rules, by not allowing you to use an older version of metering equipment.”

Thank you.
Ashley Suggs
Complaints Investigator, Consumer Services

And yet, I can move one county over and use a different energy company, also overseen by the Arkansas Public Service Commission, and I can get an analog meter. Seems like these corporations basically can do whatever they want. In fact, an energy company in Corpus Christi, TX where there’s and “Opt-Out Law” told a friend who tried to Opt-Out of the electronic meter and exercise her legal right to have an analog meter and they replied, “That’s not our policy”. So, they essentially said, “It’s not our policy to follow unfavorable to the corporation laws! And when we made phone calls to energy companies, you’d be shocked how much ignorance there is about who requires these meters. Several answering phones think

the PSC REQUIRES these electronic utility meters but that can't be true, or every utility provider would be REQUIRING THEM. Too many irregularities. Too much ignorance. Too many unanswered questions and yet another oversight agency NOT DOING IT'S "DUTY" to protect the citizens but is instead protecting the corporations. AGAIN. You can view the complaint letter to the Public Service Commission here and their response: <https://neighborsorganizingagainsttrespassingtechnology.blog/2020/12/07/dangerous-readings-from-our-smart-meter-what-are-your-readings/>

Below is a link from the Nat'l Institutes of Health (NIH.gov) site about the duties and responsibilities of scientists. Bottom line they conclude, "While maintaining their objectivity and focus on understanding the world, environmental scientists should be aware of the policy uses of their work and of **their social responsibility to do science that protects human health and the environment**. The precautionary principle highlights this tight, challenging linkage between science and policy. <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC1240435/#:~:text=The%20precautionary%20principle%2C%20proposed%20as,possibly%20harmful%20actions%3B%20and%20increasing>

I recently learned that one classroom at a local middle school has "dirty electricity" readings up to 1600, (should be 30), plus they have WIFI routers cooking the children and staff. I'm expecting this is "the norm" so let's get some meters, filters, and hardwired ethernet stations going!

THEN, this happened on December 27th, 2021:

Dish and DirecTV

After this letter went out something else happened that you NEED to know. We installed a pricey but necessary SATIC filter on our electric panel and also have a few Greenwave plug-ins throughout the house to tame the insanity coming from these electric meters being used here. This was done immediately upon move in. All computers are grounded and shielded, and all screens have anti blue light filters. There is no WIFI, no cell signal, and no cordless anything! We live in a steel-skinned home, so all voltage/current tends to stay inside with us. As an electrosensitive person, this means that running a vacuum in here feels like current ricocheting off the walls and hitting me, so I use a battery-operated sweeper. My point is that my environment is safe, and I know it's safe because I can feel when/if something changes.

On December 27, 2021, I was cooking dinner, waiting for my niece to arrive when some new current came screaming into this house that felt like I was being electrocuted. I ran upstairs and grabbed the new meter from supporter donations and ran down screwing the big antenna into place as she drove up. She's a smart cookie who had a high school diploma and a 4-year degree at 18 years old. She's a captain in the Air Force now and we'd had a recent conversation about the FAA's concern over the deployment of 5G around airports. In their petition to stop it they stated that Dish and DirecTV would be moved to the C band part of the electromagnetic spectrum and would be the only things parked there. She gave a hard eye roll and stated her beliefs about why it shouldn't matter and that was it, but I didn't forget what I'd read in that FAA petition either about Dish or DirecTV so I knew to at least expect that something could change in my/our environment.

My niece was pulling up as I ran out the door and handed her the meter asking her to "go in and point this meter around the room and see if you can find the source...". She came out in a few minutes and said, "It's coming from the TV." The reading exceeded the limits of the meter, which is 2.45 GHz, meaning we have no idea of the true reading, but it was HIGH and therefore DANGEROUS! I had her unplug The Dish equipment and the television and we enjoyed our weekend visit.

The next week, I waited a few days before plugging up the Dish equipment and our tv to allow for any issues to settle out. I had noted when electricians came to heal our house that often it would take 3 days for things to calm completely. I took some readings again with the same meter and there was now a 2.6 mw/m2 reading in the house that had not been here before or I would've felt it. Readings in my mom's room, which is surrounded in metal on 3 sides were showing the signal bouncing wall to wall to wall. I knew this wasn't okay as a safe reading on this meter is .1 according to Building Biology standards. Some experts say they're okay with a 5 reading but again, in this steel house where everything electrical is amplified and trapped in here with us, and me having EHS, I have a lower threshold of what I'm willing to tolerate, especially if something suddenly changes.

I again unplugged their equipment, and we began the search for television that didn't involve being cooked. We now have a hardwired to the internet television and LOVE IT. It's a TCL brand, their 4K series and I have another book here that shows an adaptor so we can use the existing coaxial cable to use this same set up in other rooms if we buy the right kind of television. You can learn about that option here: https://www.youtube.com/watch?v=dm_Znyh7uZ0&t=149s

We were now safe again but then...our precious neighbor, 82-years-old, had a stroke. I was talking to God one day about him and wondered if there was anything in his electrical world that could explain this. Bam, it dawned on me that he too has Dish satellite tv and lives in a metal house though it's covered by vinyl siding. I took the big meter with the Christmas tree antenna and showed his daughter how to use it. Keeping it brief, but the same thing happened. It exceeded the meter's limits. Meters are now necessary tools for the electrified world we live in.

Also, can we please stop spraying WIFI (245 billion cycles per second of Pulsed Microwave Radiation) out into this dense natural forest at the Library and the Courthouse and anywhere else now that we should know better? PLEASE! These are not private businesses, and this shouldn't be happening now that we know what we're really doing. Instead, let's build a tourist-friendly cabin at the library with several hardwired stations and lots of literature about how to use technology safely.

The Precautionary Principle That Has Guided and Restricted the Activities of Progressive Ideas Through Time is Being Ignored

As you're starting to see there are many issues with these meters, towers, technology... not even being addressed here but we do have options for utility meters that don't include killing everything and violating citizens "Unalienable Rights...created before the creation of the State". Have you looked at your unalienable rights lately? Let me go get that image for you and see how many rights have been forfeited to ALLOW this high-pitched squeal, fear from harm, and our "enjoyment" of life and my DISABLED but not recognized status. I counted 11 of my **"Specific Rights"** have been violated and THESE aren't from government and cannot be infringed upon or set aside, and yet...

And if the above isn't enough, two local papers here in the Arkansas Ozarks are bragging (Oct 19th & 21st editions), that PBS and the State of Arkansas have installed 4 transmitter/repeaters so that PBS can be viewed by 95% of households in the state at a cost of \$6.4 million. This means more radio waves being carried in the air here looking for antennas, and because we are all water-filled upright antennas you might want to consider any new/recent symptoms of illness with the awareness of yet another source of radio waves in our state. Perhaps the severe case of Vertigo I experienced in the last weeks is from this new "blessing". Come on people!!! **Where are the thinkers?** And now we'll have to deal with the ego of those who moved these things forward I suspect. Nobody wants to admit we/they messed up and back out of this,

so I'll just wait to see who dies this December here. If it's a third woman whose been working in the same toxic building here then MAYBE someone will finally see what they need to see and take some action.

Because of the dangerous readings being found in most buildings in town from the very toxic form of electric meter in use here and the widely accepted practice of WIFI, I can't go in any buildings here, to friends' homes, to any events where everyone has a cell phone emitting radiation, to restaurants, the courthouse, anywhere that's blasting WIFI, or is near any towers. I can't travel even to Harrison from Jasper because the towers literally zap me as I pass them. One local reported of having pain in the heart when passing a new tower in Harrison.

Do you have any idea how many of our "God-given" not government rights we are surrendering by accepting all of this? YOU NEED TO LOOK INTO IT. The image below is a great place to start that review. I can easily see where 11 of the 20 no longer apply to me or anyone with this condition of being poisoned in our environment, against our will/consent.

YOUR UNALIENABLE RIGHTS	
Unalienable Rights are the Inherent, Sovereign, Natural Rights that existed before the creation of the State, and which, being antecedent to and above the State, can never be taken away, diminished, altered, or liened upon by the State, subject only to the Due Process of the Common Law. Nor can any Unalienable Right be fundamentally removed, whether mistakenly by contract through non-disclosure, which is fraud and unenforceable in Law, or knowingly by renunciation, which is contrary to Natural Law. The Original, Permanent, Unalienable Rights of every Man or Woman, include:	
The Right to Life, Freedom, Health, and the Pursuit of Happiness	
The Right to Contract, or Not to Contract, which is Unlimited	
The Right to Earn a Living by being Compensated with Wages, a Salary, or any trade Goods, in a Fair Exchange for one's Work	
The Right to Travel in the Ordinary Course of one's Life and Business	
The Right to Privacy and Confidentiality, free from Unwarranted Invasion	
The Right to Control, and Hold one's Property, lawfully without Trespass	
The Right to Self-Defence when threatened with Harm, Loss, or Deceit	
The Right to Due Process of Law, with Notice and Opportunity to Defend	
The Right to be Presumed Innocent, suffering No Detention or Arrest, No Search or Seizure, without Reasonable Cause	
The Right to Remain Silent when accused, to avoid Self-Incrimination	
The Right to Equality in the eyes of the Law, and to Equal Representation	
The Right to Trial by Jury, being an Impartial Panel of one's Peers	
The Right to Appeal in Law against Conviction or Sentence, or both	
The Right to Expose Knowledge necessary to one's Rights and Freedoms	
The Right to Peaceful Association, Assembly, Expression, and Protest	
The Right to Practice a Religion, and to have Beliefs, of one's choosing	
The Right to Love, and to Consensual Marriage with Children, as a Family	
The Right to Security from Abuse, Persecution, Tyranny, and War	
The Right to Refuse to Kill under command, by reason of Conscience	
The Right to Live in Peace and be left alone when Law-Abiding	
Surely, the most critical failure of The People is their failure to ensure the teaching and common knowledge of their Unalienable Rights. If you do not know your Rights, you effectively have none. By the path of Ignorance, whether by Apathy or Deception, The People arrive in a state of Exploitation, Oppression, and Tyranny.	

THIS MAY SEEM OVERWHELMING BUT MUCH OF THIS CAN BE TAMED. We can hardwire gadgets instead of using WIFI. People can learn to put their microwave radio/phone in a faraday bag to protect themselves, their family, pets, friends and strangers. Go to a “cell phone use” section of the world just like “smoking sections”, and we can change back to a true analog utility meter and a call-in system. It’s simply a matter of teaching people that THIS is akin to secondhand smoke BUT WORSE, because it’s pervasive now in our world.

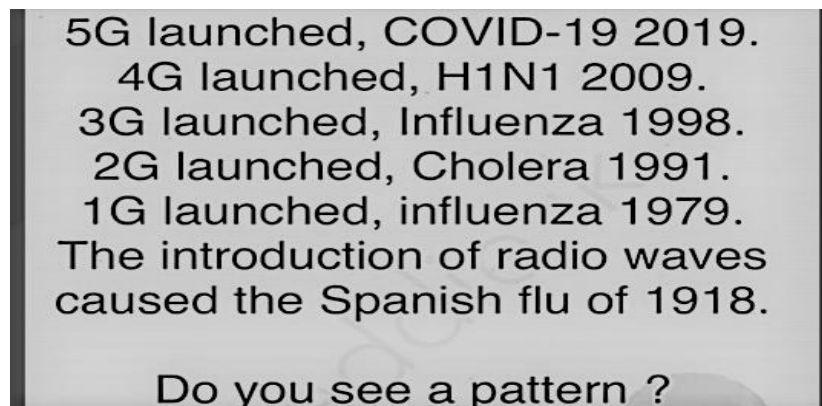

Is Covid-19 From Electromagnetic Radiation Exposure?

I think I’ve said earlier that “what information I need comes to me”. If I’m trying to understand something. It’s like I have a (wink wink) librarian in the sky who’s making sure that the insights I need are backed up by experience and credible sources, so I don’t have to merely wonder if what I’m thinking is correct. If I’m wondering about something, an answer comes. Likewise, if I’m not seeing something I NEED to see to carry on with this effort, I get the experience that leads me to ask the question so it can be answered, and I get the information we all need.

Below is an image that came out on social media platforms presenting an idea that I couldn’t laugh off because of something that happened to me here July 3rd-8th, 2020. Then Dr. Thomas Cowan was giving a talk somewhere and the last ten minutes of that talk went viral online. He was showing content actually inspired I believe from the book by Arthur Firstenberg, *The Invisible Rainbow – A History of Electricity and Life*, pointing out how our “outbreaks” have historically lined up with the launch of new technology. 10-minute video be found here: <https://neighborsorganizingagainsttrespassingtechnology.blog/2020/07/23/every-pandemic-in-the-last-150-years-there-was-a-quantum-leap-in-the-electrification-of-the-earth-dr-thomas-cowan/>

Many experts are sharing this concern! You can see a dozen related posts at this link: <https://neighborsorganizingagainsttrespassingtechnology.blog/category/covid-19/>

I’ve read Dr. Cowan’s co-authored book titled, *The Truth About Contagion*, several times now, shocked at even more of the lies we’ve been sold. It’s an easy 164 page read that I believe is worth your time. You can find it on Amazon at this link: https://www.amazon.com/Truth-About-Contagion-Exploring-Theories/dp/1510768823/ref=sr_1_1?crid=3VPD9N6DJRBBP&keywords=the+truth+about+contagion+thomas+cowan&qid=1660250241&srefix=the+truth+about+contag%2Caps%2C286&sr=8-1

July 3rd-8th, 2020 we’d been here for 8 months, and I knew how I felt here and in our home. I was 63 years old and had never had vertigo or anything close to it in my life and I’ve been “to hell and back” in this body as one of my readers put it. I know my body and I stay hydrated and live a very healthy lifestyle. I woke up on July 3, 2020, on the verge of vertigo and it was still there on the 8th. I got up, dressed and

determined to at least ride to town with Mom after a week of feeling puny. I often did the driving at that time but not this day as my world was still a little off.

We live down in a hollow deep in the trees and the earth jets way up above us on all sides. The driveway is ½ mile long, no cell signal down near the house. As soon as we came up out of the tree line, I was immediately hit with some form of energy that hit my torso and then immediately hit my lower lungs and then seemed to fade out quickly. Mom got out of the truck to check the mail and I jumped out to get my bare feet on the ground to calm the hit I just took. As I was standing barefooted, I noted that my hands and forearms began to feel as though I was being exposed to WIFI. Now mind you I'm standing in the middle of the Ozarks with 100,000 acres of national forest across the street. Where would I be getting WIFI and what was that energy that hit me first, and hit my lungs? Mind you, the Covid pandemic had been in place for several months and because I'm living through this specific story I can't deny as easily as others that there could be another explanation for this "outbreak" other than a lab created virus or the infected bat in a wet market idea. FYI, July 9th, everything returned to normal which made me think they were testing spraying EMR at the Earth from space for that week. I went back home realizing that **if they tell us an outbreak is from a "virus" we won't consider other ideas like we may be being hit with electromagnetic radiation from some new tech being launched that affected the entire electromagnetic envelope that surrounds us.** Then, Dr. Cowan's video, linked below, showed up and then more experts touting the same theory/idea came along. You can find them at this blog site: <http://neighborsorganizingagainststresstechnology.blog/category/covid-19/>. One of these sources is a former boss at Vodafone. **He speaks of a "virus produced by cell poisoning" from radiation exposure.** He gets into some very interesting ideas that we should study further. I'm not declaring that everything he says is right I just think we need to listen to what he's saying and give it careful consideration at this point. <http://neighborsorganizingagainststresstechnology.blog/2020/12/05/former-cell-phone-boss-blows-whistle-on-5g-and-virus/> Then this little symptom chart showed up again with a very interesting heading and comments:

Exposure to 5G waves leads to "flu-like symptoms."

Symptoms of Microwave Illness

<https://www.microwavedvets.com>

Headaches	Difficulty Concentrating	Tinnitus
Dizziness	Memory Loss	Hearing Loss
Nausea	Brain Damage	Irregular Sleep Pattern
Skin Rash	Mood Disorder	Insomnia
Itchy Skin	Personality Disorder	Chronic Fatigue
Burning Skin Sensation	Increased Irritability	Deteriorating Vision
Tingling Sensation	Decreasing Trust in People	Pressure in/behind eyes
Tremors	Depression	Eye Damage
Muscle Spasms	Anxiety	Cataracts
Muscle and Joint Pain	ADHD/ADD	Immune Abnormalities
Restless Leg Syndrome	Digestive Issues	Altered Sugar Metabolism
Foot Issues	Abdominal Pain	Asthma Attacks
Low/High Pressure	Enlarged Thyroid	Bronchitis
Facial Flushing	Hair Loss	Pneumonia
Dehydration	Testicular/Ovarian Pain Low	Inflamed Sinuses
Body Metals Redistribution	Sperm Motility	Chest Pain/Pressure
Leukemia	Miscarriage	Heart Arrhythmia
Lymphoma	Electromagnetic Sensitivity	Heart Palpitations

Wuhan was the province where 5G was rolled out, now the center of deadly virus

"WUHAN, Oct. 31 (Xinhua) — The branches of Chinese major telecom operators in central China's Hubei Province announced Thursday the launch of commercial 5G applications in the province.

Wuhan City, the capital of Hubei, is expected to have 10,000 5G base stations by the end of 2019, said Song Qizhu, head of Hubei Provincial Communication Administration.

I did wonder why there weren't any hazardous waste bins for the used masks etc. Then there came the goofy rules about where we could be and not be as if the virus was confined to certain times of day and places of business, and behind a piece of plexiglass in an open-air room. After my near vertigo event that lasted a week and the feeling I was being hit with electromagnetic radiation standing in the middle of nowhere, I had to admit that this theory of this "pandemic" being caused by the massive deployment of electromagnetic radiation seemed to be a very reasonable explanation backed up by many credible sources! I recall <https://www.cellphonetaskforce.org/> reporting that some satellites had been launched during this period and he received a historic number of reports of people having vertigo who had never had vertigo before. I'm sure he'll provide that information if requested. His name is Arthur Firstenberg, the author of *The Invisible Rainbow – A History of Electricity and Life*.

IF you care what I think... the 25-page introduction to this document is the answer to that question aptly titled, *Covid-19 Pandemic & The Election-Was it planned? Why? By Whom?* <http://neighborsorganizingagainsttrespassingtechnology.blog/2020/11/02/covid-19-pandemic-the-election-was-it-planned-why-by-who/>

Where is all of this taking us?

What we're doing isn't smart and is part of a plan that would horrify you if you went down that investigative road. "**Sperm count at zero by 2045**" should give you a clue. A new book I just received titled, *Geoengineered Transhumanism*, by Elana Freeland, is another clue. https://www.amazon.com/dp/0578927055?psc=1&ref=ppx_yo2ov_dt_b_product_details This is a 696-page book and is one of several dense books on related subjects by her. You can learn more about her and her other publications here: https://www.amazon.com/Elana-Freeland/e/B00J0RO49W/ref=aufs_dp_fta_dsk

Humans 2.0, another book on the subject found on Amazon.com asks, "Will technology usher in a new future or have we gone too far?" Unprecedented developments in bioengineering, biotechnology, and biomedicine breakthroughs that could improve the lives of people with debilitating diseases and injuries can also serve as stepping-stones to technologies that can enhance human beings and alter human nature, raising fears about how biotechnologies could be misused. Should we discourage advances in biotechnology and bioengineering that can be used for human enhancement? Or should we take control of our own "evolution" and usher in a posthuman age? Is there another option? In *Humans 2.0*, authors Fazale "Fuz" Rana and Kenneth Richard Samples open a window to the new world of human enhancement technologies and transhumanism their promises, potential, and pitfalls." As usual Amazon lists several other books on this subject that is worthy of our exploration. https://www.amazon.com/Humans-2-0-Philosophical-Perspectives-Transhumanism/dp/1886653127/ref=d_pd_sbs_scel_3_8/132-2144762-6149957?pd_rd_w=mIcu9&content-id=amzn1.sym.d8274306-8eaa-4da3-9175-aca6400f9aa9&pf_rd_p=d8274306-8eaa-4da3-9175-aca6400f9aa9&pf_rd_r=EZ3DT2GC4SPYDHDHX9KEQ&pd_rd_wg=vOLRp&pd_rd_r=d68c9c03-be2c-400c-b496-0fc1e5827f02&pd_rd_i=1886653127&psc=1

Our wide acceptance of this has us at full gallop towards a cashless society, a social credit system, and a full-scale artificial intelligence tyrannical future. Look at your children. Is this what you want for them? If not, NOW is the time to stop this. This idea is not extreme when Steve Bannon does an entire Saturday show several times on the topic and his guest, Joe Allen is a frequent commentator. <https://joebot.substack.com/> I went to get that link for you and the first post I see is titled, **Humanity 2.0 Is Coming — You Ignore Steve Bannon's Warning at Your Own Peril... "The Biden Administration is throwing billions into transhumanist technology. As usual, the media is absolutely clueless"** <https://joebot.substack.com/p/humanity-20-is-coming-you-ignore>

Then there's Dr. Thomas R. Horn's book, *The Milieu: Welcome to the Transhuman Resistance*. From the book description on Amazon.com indicates the following points covered "The link between artificial

intelligence and the image of the Beast from Revelation...Why a pro-transhuman Milieu group is forming at the Vatican right now, and what plans they have in mind for humanity's future...How nanotechnology existing at this moment will soon allow for human-robot offspring and why that might be the very technology that ushers in the Antichrist." I'll also be reading his book, *Forbidden Gates: How Genetics, Robotics, Artificial Intelligence, Synthetic Biology, Nanotechnology, & Human Enhancement Herald the Dawn of Techno-Dimensional Spiritual Warfare*. It's another confirmation that we need to be paying attention to these issues. https://www.amazon.com/gp/product/B07H45MG35/ref=dbs_a_def_rwt_hsch_vapi_taft_pl_i5

"The danger of AI (artificial intelligence) is much greater than nuclear warheads, BY A LOT. Mark my words, AI is far more dangerous than nukes....and has zero regulatory agencies". In this 8-minute video, Elon Musk in the opening moments, <https://www.youtube.com/watch?v=9jkRcrM6XKA>

This video came up after the Elon Musk video above. 17-minute TedX talk titled, ***Artificial Intelligence: it will kill us*** | Jay Tuck | TEDx Hamburg Salon <https://www.youtube.com/watch?v=BrNs0M77Pd4>

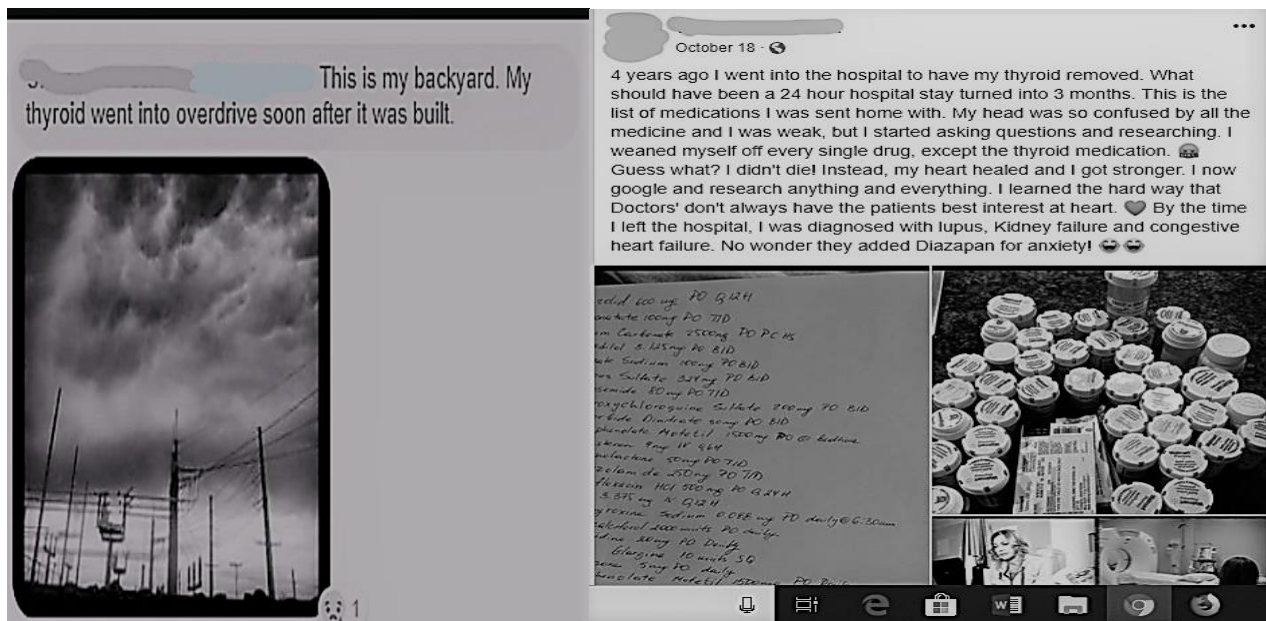

We need to realize where we're headed and make some decisions. Time to make some choices here folks and we're actually late to the show. I've had to recover from your laughter and mocking and regain the strength to try again so it's slower than if I'd had a team of supporters. Humans do not make activist work easy!

Speaking to the people who are carrying out this agenda: I don't think God is impressed if your husband plays bass at the Baptist Church or how much charity work you do, or how nice of a neighbor you are. If you're being unkind, snitty, condescending to those being affected by this, helping protect an evil agenda, and treating GOD's creation and your neighbors as if they aren't important to you and your wink, wink "member-owned" corporation, I'd be concerned about the status of your soul. That entry in that journal on May 27th, 1990, which I still have, tells me that He's watching every bit of this and if you're on the payroll in a "steward" role, He expects you to be a "steward of the people"! All have failed!

Arkansas' State Motto "The People Rule" ... Do they?

Let's not forget the little 90-year-old woman with the 62-year-old "environmentally fragile" daughter who like many of us now, could not stand the placement of an electronic utility meter. Nicor Gas Company threatened to condemn their home if they didn't allow it. This was the residence of the mom for 54 years, beloved and "made safe" for the daughter. Now driven into a small, manufactured home while the other home is being foreclosed on.

After I became acutely injured when I touched that new cell phone and posted online someone tagged me with the image below and shared her story of buying a brand-new home and the electric farm pictured showed up across the rock wall a year later. I have a hard time believing that nobody knew this was in the planning stages so who has the obligation to inform. She should have had to sign a form saying she knew it and accepted the home anyway. It damaged her thyroid and when they put her in the hospital to remove it, she ended up there for three months instead of 24 hours and left with a bag of Rx meds and thoughts about ditching the mortgage to protect her and her family. If she has to put this on the Seller's Disclosure, they'll never sell it or get its true value. No other corporation has been given this much leniency and privilege and after 6 years on this battlefield, I can tell you without hesitation that WE THE PEOPLE are the only ones who can stop this. NOBODY IS COMING TO SAVE US. If we don't stop this, we are setting a very bad precedent for the next vile industry that has us in its grips.

Hindsight being 20/20 I now realize that when I first married and moved into my husband's rural home there was an electric substation about 250 yards away. His previous wife of 9 years had not been able to conceive. After our marriage I became pregnant within 3 months but within 6 months after the birth my body began shutting down. A young couple who lived about 100 yards from this electric farm gave birth to a stillborn baby and I don't think any of us in that area even considered it as a factor, but we sure should have. My father-in-law used to tease me and ask if he needed to "dip me" for fleas. He was referring to an unconscious act of my reaching up and touching a spot on my collar bone in a brushing kind of movement. Had he not mentioned it I likely wouldn't even have noticed it. After becoming a licensed massage therapist, I learned about the meridian system of the body and recognize those "divets" there and all throughout our skeletal system are actually "energy entry points" where energy enters our body. That "current" in the air was finding me and stinging me there very subtly. When we rented the home, the tenant then developed female reproductive issues so if you're having trouble conceiving or don't want a stillborn baby, I'd suggest looking around at what's around you!

I don't think for one second this is what We The People want; corporations coming in and installing unsafe technology, ruining our health, harming wildlife, destroying our investment, and peace of mind with a non-stop squeal in the air?

"What can we do?"

"Like the warnings on cigarette packages, there will be warnings on cell phones against use by children; sales of cell phones to young people will be forbidden. And no one will dream of entering another person's home with their cell phones on. Public pressure will ensure that all large gatherings...begin with admonitions...High schools will not allow cell phones and all computer input for children will be in wires. Offices will designate special areas for cell phone use, in deference to the electrically sensitive, like special areas for smoking, and give all employees old-fashioned telephones."

The Truth About Contagion by Dr. Thomas Cowan and Sally Fallon Morrel

A "WE THE PEOPLE" MOVEMENT!

When I knew we were moving here and that they had a very toxic form of smart meter I tried to get accommodation from Carroll Electric with that Letter of Medical Necessity from my doctor as an ADA effort and saw that wasn't going to work without forcing them into compliance. They don't see the threat, the agendas, who may be behind said agendas and where this is taking all of humanity and weren't interested in how their technology may be affecting me or the wildlife. It's just simple enough to call me "crazy" and write me an inflammatory letter, instead of writing my doctor as was requested by her. The staff attorney wrote snidely asking if my doctor "was an electrician and how she'd know about an electric meter she'd never seen" which is a huge violation of ADA laws and violates God's moral code for treating someone the way you want to be treated. BTW: The answer to her questions is because this doctor had taken courses on the hazards of electromagnetic fields, sources of same, and how it may affect a patient. There are tons of scientific studies on it now not to mention the ease of access of information on the internet alone, like where most of the info in this booklet came from. Go to PubMed and look up "Electromagnetic Fields" and see where it takes you. She then took liberty to downgrade my examining and treating doctor's diagnosis to a "mere medical opinion" which may be true when a person hasn't been examined or seen but that's not the case here and she/you/we can't just disregard a qualified medical doctor in favor of a utility corporate lawyer. Do you see where this kind of behavior being tolerated can facilitate evil ideas? Since when did "we the people" become the scrutinized and the corporation become protected? Again, are you okay with this because it's only a matter of degrees between having a corporation FORCE technology onto your property for essential services to the point of a corporation being allowed to FORCE technology INTO YOUR PERSON if you want to have essentials to living? Can you see why resistance may be an important stance at this juncture?

I had asked for a mechanical analog utility meter and offered to take a picture and email my readings to CECC or even phone them in. I then reached out to DisabilityRightsAR.org by phone and spoke to Thomas Nichols, the legal director. I told him the situation and when I emailed him the written response of their staff attorney, he told me that my request for accommodation and offer of remedy was "perfectly reasonable" which is legal language. He advised me to file a complaint with the Arkansas Fair Housing Administration. While doing so, a man named Darryl said, "Well if you have a letter from a doctor, that's what our decision will be made on." A week later I got a letter from that agency saying, "We have no jurisdiction in this matter" and the case was sent to the Department of Justice. A few weeks later I received a letter from the DOJ saying they "have no jurisdiction". The case was then sent to Legal Aid and in my opinion the subject matter was above the head of the person who got the case so again....no relief. I don't know why I'm supposed to take the word of someone who researched it for a few days instead of ME who'd been at it for several years at that point but that's the world we live in now. I then wrote an EMF email group and asked about their experiences where they shared that a dozen of them had gone through the same process. Their cases had sat with the Dept of Justice for 2 years when suddenly all twelve of them received a letter saying, "We no longer have jurisdiction". So, essentially, the powers-that-be pulled oversight or "jurisdiction" regarding wireless or tech issues from every agency that could bring relief or hold offenders accountable. If you send all the sheriff's home, there's nobody to report the crime to. ***I tell you this because I want you to understand when I share this next step that I came to this after exhausting every other avenue.***

So, I ask, are you sure this is what you want to create, or should we back up and try again because even a lawsuit isn't going to right this level of wrong. A lawsuit may create disincentives but we're pretty far down the path of destruction now, so I think we need to think beyond a civil suit. EVERYTHING will be well past destruction before any justice on this Earth happens in a civil suit process. ***So, WE THE PEOPLE must structure our own from local government in an urgent manner. Our federal government is obviously not the solution, and I can't imagine a private corporation coming forth for the right reasons so it's up to us and it's going to take whole-hearted immediate effort to change where we are.*** I personally see a horror show coming if WE THE PEOPLE don't stop this. Sure enough, someone just sent me a pm on Facebook with a link to a woman's website who killed herself on 03/12/2019 to stop her

suffering from EHS. Her neurological pain and Epstein-Barr Virus drove her to end her life. It brought back to mind this PubMed article: **Exposure to a 50 Hz electromagnetic field induces activation of the Epstein-Barr virus genome in latently infected human lymphoid cells.** <https://pubmed.ncbi.nlm.nih.gov/9276003/>

It's very disturbing to see people demonstrating an inability to process information while they prefer the government or mainstream media narrative without question, a healthy suspicion, or even relying on spiritual discernment, or just asking GOD in prayer to reveal the truth. Most people can't stay in the conversation long enough but just spout off with what they've been fed with little to no actual research of their own and for the record, you typically won't find truth on page 1 of Google as they too are part of "the machine". Oddly, people's suspicion is directed towards those who have little to gain and are going to great lengths to warn them. I've never imagined such an arrogant and ignorant combination in humanity but here we are, brainwashed by the mainstream media sources...and so...it's time to learn about CRIMINAL ASSAULT, because they've left us no other options if they won't honor the ADA laws! I have contacted someone high up in the Common Law Courts of Arkansas and am currently playing phone tag with the Legal Director of DisabilityRights. I'm also attending an online webinar Saturday, June 27th, 2026 about how to file a LAWFUL claim. You can learn more at this link: <https://tinyurl.com/3f8hezfc>

We can make a huge change in where we are if we start by focusing on five things:

- 1. wireless etiquette among the humans for personal devices used in public; BAG THEM!**
- 2. hardwiring internet connections in public and private space,**
- 3. returning to mechanical utility meters,**
- 4. and stopping the insane rollout of new towers and putting all existing towers under review,**
- 5. request, hound, and demand a landline since we already paid for the copper lines, and they're trying to abandon them and have rerouted our tax money illegally to "their" wireless agenda to our collective detriment**

I started a "solutions" category for you to find out how to hardwire your computer, where to buy faraday bags for phones/devices, the dirty electricity meters and filters, wearables I use, and more here: <https://neighborsorganizingagainsttrespassingtechnology.blog/category/solutions/>

At a certain point, the saturation and lowering of towers made it clear that this is not about us being able to use our cell phones so getting rid of as many towers and antennas as possible is a next step. If you need a fresh reminder of why go look at the home page of TheTruthAboutTechnology.org and see the damage to wildlife alone. Go to the Images That Teach page and see what you learn. Buy the Hidden Dangers book.

Simple enough, if you need to use a wireless device, you simply walk away from people and remove it from its bag. **You no longer get to "smoke" anywhere you want without regard for others.** You wouldn't hand your child a lit cigarette to smoke so they shouldn't have a cell phone in their hands either. If you wouldn't smoke in the car with your child, then you also shouldn't have your smart devices spewing into the metal container you're riding in. I'm warning you that cancers are going to come at children like a freight train in the near future FROM THIS and you're going to feel like a real jerk. WIFI is 245 billion cycles of pulsed microwave radiation and children absorb MUCH MORE than adults. It can go through walls and phones are said to emit up to 20 feet, so we need to change the way we're using this stuff! This also means your "smart" watch and iPad is like a lit cigarette to other people and **you just don't have that right now that you realize it's pulsed microwave radiation.**

When this message takes off and we change, we're going to be shocked at how stupid we all were, how selfish and entitled it has made us, and how rude we can be, as a CULTure, when someone

brings in new and unwelcome insight that affects our personal choices. I still recall how outraged I was that I was told to wear a seatbelt after years of not doing so. Now, I understand it can give me a better chance of maintaining control if I'm not sliding across the seat. Again, when we know better, we do better. It's time to do better. **Equally as important, take responsibility for the electrical health of your personal home and demand a safe work environment free of microwave radiation.**

Below are the options I see to address these issues!

I strongly suggest taking steps as a group as directed energy weapons are real and they can amplify your suffering. Ask me how I know or you can search the Targeted Individuals category on NoATT.blog at:

~~~~~  
**This Open-Source document was created after my acute injury by a new cell phone and from living exactly like the television showed me to live, followed by 6 years of research, and being fully disabled from living life due to our world now being saturated with radio waves aka “electrosmog” in many forms. You can go to NoATT.blog and give a donation to say, “Thank you” for the tireless efforts to inform, equip, and warn. Your donations help pay for the cost of websites and email accounts, paper, ink, books I buy read and regurgitate for you, as well as books printed and circulated like the one you’re holding, and food and nutritional supplements that keep the warrior at the keyboard.**

**I live simply so you can rest assured that donations are not supporting a grand lifestyle.  
I don’t worry about the future because if we don’t get this part right,  
there won’t be a future for humanity.**

~~~~~

Please note: This document is intended to be for educational purposes only. It is not intended to be legal advice and you should not rely on it as such. It is highly recommended that you seek legal advice as to the procedures and law discussed in this document. The author and publisher accepts no responsibility whatsoever for any loss or liability incurred as a result of following or failing to follow the recommendations herein.

First Option: The CRIMINAL ASSAULT Complaint Process

A “barrister” aka a “lawyer” in Australia, Ray Broomhall, had a client presented to him by one of their agencies who has Electromagnetic Hypersensitivity. They told him this woman was “allergic to the 21st century”. He admits that at first, he was reluctant but has come to be a convert and now has “hundreds” of clients asking for his help to protect them from tech assault.

At the link below you’ll find 22 Suggested Steps provided by barrister at law from Tasmania and Australia, Raymond Broomhall, who’s implemented legal process has resulted in thousands of small cell sites and 5G installations being either prevented or removed.

<https://www.wesaynoto5ginaustralia.com/raymond-broomhall-action>

Ray Broomhall commented on the US Criminal Code in the USA and believes this method applies here. My own research indicates that in the USA you have to establish that the assault is intentional. I’m pretty certain that it was in an early release of **Cal Washington’s Notice of Imminent Liability Effort** below,

that after you've informed the person or entity that you are being harmed by their behavior, if they do not cease immediately, then it becomes intentional with a daily fine levied. I would give or send the assailant or emitter a copy of this booklet and document that they received it by certified mail or a witness and photo of them being handed the booklet. For "intentional" assault it looks like a serious prison term can apply.

This link is the audio interview with the above-mentioned attorney who's prevented 900 small cell towers and 1600 proposed sites using this method. He walks you through the process of filing a criminal complaint on the video at this link: <https://www.youtube.com/watch?v=3p3lp5U0ZWM>

This can be used to stop a neighbor from trespassing with technology into your world by a WIFI router, a cell tower on their property, or an electronic utility meter from being forced onto your electricity without consent, against a cell tower company, against any source of electronic pollution that affects the quality of your life, liberty, and pursuit of happiness.

Second Option: Methods Below by Jerry Day

Another site by Jerry Day offers several letters/forms that may be helpful in the fight specifically against digital electric meters. I've never tried his "Notice of Liability for Unsafe Utility Meter" letter, but others have and have had success. I'm sure I'd find others who had a utility company like Carroll Electric who'd likely cut their power in the dead of winter just for sending the letter, so you'll need to do some inquiry and think about this one. Here's some commentary from his site at <https://emfhelpcenter.com/>.

"There are many reasons to oppose and refuse electronic utility meters. If you do not want to risk having your electricity turned off, but still want to protect yourself legally against the damage the meter may cause, fill out and send the Notice of Liability to your power company CEO or top executive by certified mail.

"This document causes that person to be personally responsible to pay all costs of harm and damages caused by the unlawful invasive radiation-emitting fire hazard surveillance device they have put on the side of your home after you show them evidence of damage and submit your claim.

"We have found that utility companies usually do not properly or lawfully respond to a customer's refusal of the hazardous and harmful electronic utility meters. Rather than simply provide a standard, safe and lawful electromechanical meter as the law requires, the utility company usually proceeds to unlawfully bully, harass, mislead and penalize the customer, and in some cases terminate the customer's electric service unjustly.

"Our courts, justice system and law enforcement consistently fail to protect utility customers from this abuse and these criminal violations perpetrated by utility company officers and employees.

"Those utility customers who cannot install OFF-GRID energy production of their own and cancel their utility accounts must take other measures to protect themselves as we outline on [EMFhelpcenter.com](https://emfhelpcenter.com). You'll find more complete instructions explaining how to send several notices under the center column on his home page titled 'SOLUTIONS'".

Third Option: Become a State Citizen of the united states

I finished creating this document, uploaded it to NoATT.blog and began sharing it online. About four months went by and a “great stillness” settled in around me that I’ve come to understand indicates knowledge is about to come my way and I need to watch for it. I began to pray for God to “Show me what’s around the corner. I can’t see what You want me to see!” Suddenly, in the next weeks I began seeing videos offered on YouTube and more than a few people began sending me links in private messages to the process being called among other things, The Great Awakening. <https://tinyurl.com/2s3mwyfz>

As soon as I saw that they were FOCUSED on our UNALIENABLE – “FROM GOD” RIGHTS I knew this was an important piece of insights. My technology injury has forced me into complete isolation from the world and violated my rights in unimaginable ways and is a violation of American Disability Rights, and basic human rights in that I can’t enter any buildings due to the forced placement of an electric meter that was banned in two countries and has clearly contaminated the power lines here as the FCC says this system does. This means I have NO ACCESS TO MEDICAL, DENTAL, CHIROPRACTIC CARE OR THE ER! As one of the 119 million people in the USA with this condition, according to the NIH, that means we have no access to live our lives and nobody is accommodating us. We’re viewed as an “inconvenient truth”. If you look at the AI/Transhuman category of this NoATT.blog site, you’ll see a video where a podcast guest is sharing art and literature dating back to the 1500’s by the “elite families” declaring their intention to replace humanity with silicon beings titled, **90% of Humans Gone by 2029.**

Another consideration is the dominant presence of the Chinese Communist Party throughout our world, including our electric grid. New World Order, Illuminati, CCP, AI, Wireless Technology... We The People, have enemies and if you don’t pull your face out of your phone and get invested in your own future you likely will not like your destination. Mindlessness and an unbalanced focus on being entertained or comforted can fail to serve your best interest. In other words, **WAKE UP PEOPLE!**

I work from my hard-wired world trying to show you what’s being built around you to the detriment of all living things as is clearly seen on TheTruthAboutTechnology.org and the NoATT.blog sites.

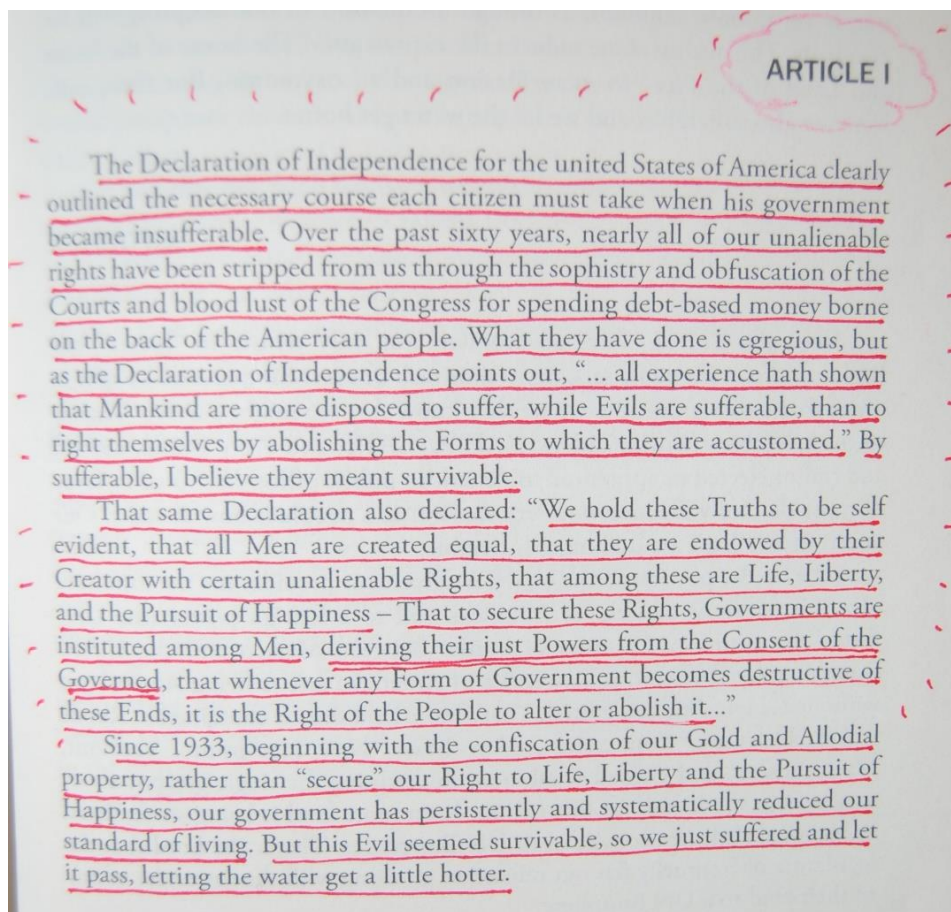

THIS INFORMATION I’m about to share with you may be the most important thing you’ve seen thus far. I’ve shown you the enemies, now let me show you what I believe is OUR WAY FORWARD if you’re willing to do some work. Anything of value will typically require something of you...your attention. I will say this revelation gave me hope. It helped me see that GOD’s desire here is to redeem HIS PEOPLE, HIS CREATION from the unfaithful stewards and profiteers BUT WE HAVE TO BE INVOLVED.

I then mentioned this next effort I was now reading books about and watching videos, to a neighbor, and they have friends going through this process of “changing their status” from a US Citizen to a State Citizen. I reached out to a savvy cousin, and she’d heard that the project/effort had some issues, “got messed up” a few years ago, but it appears to me that whatever that may have been about, seems to have been overcome and things clearly seem to be moving forward. This may be what God was talking about to me when I argued with Him about doing this mission here 4 years ago. He replied, “NOTHING CAN STOP AN ORGANIC MOVE OF THE PEOPLE! NOTHING...IT WILL HAVE TO BE A TSUNAMI.”

As I eased down this road watching a few videos from several sources I decided to watch one because it was being hosted by a well-known and respected doctor in the alternative medicine field. We watched for a few minutes then I had to stop it to handle something. While it was paused, I said, “I believe this effort is going to show us how to hold this lawless utility corporation accountable”. We restarted the video and within 10 minutes the guest teacher said exactly those words, **“will teach you how to hold corporations causing harm accountable”**. We shall see.

This document has now been out since the fall of 2022. It's August of 2026 and I haven't taken any action for many personal distraction reasons, but I also recognize this is not something to be taken on casually and that it could very likely get someone in trouble IF DONE WRONG, so don't go rushing into anything. I'm rarely to never the first one on the bus. I watch and let others make the inevitable mistakes and "wait" for "right direction". I've been working on other tasks, so I put this on the back burner. I was pointed to a man who is successfully leading people out of the corrupt USA IS A CORPORATION system for 17+ years now and not one of their clients has had an issue with any government agency, including the IRS and income taxes they no longer pay. Kelby Smith of HISAdvocates.org pointed out that Black's Law Dictionary doesn't define the USA as "from sea to shining sea and the border of Canada. It defines it as the 10 square miles of D. C.". So, if you aren't living there or one of their territories, islands or possessions, working for or contracting with them, you don't OWE INCOME TAXES but again, do not try this alone. Go check out what Kelby's doing. You can also watch him on YouTube. <https://tinyurl.com/34jcuazs>. You simply cannot imagine what happened to our REPUBLIC until you go do some reading! A stealth takeover!

Here's a quote from the first book I read, *Fruit From a Poisonous Tree* by a lawyer, Melvin Stamper.

"We hold these Truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable Rights that among these are Life, Liberty, and the Pursuit of Happiness-That to secure these Rights, Governments are instituted among Men, deriving their just Powers from the Consent of the Governed, that whenever any For of Government becomes destructive of these Ends, it the Right of the People to alter or abolish it..."

It was through my injury from technology and the forced placement of a very toxic electric meter that I became keenly aware that I no longer had any basic rights. I have no RIGHT to medical or dental care! I counted eleven of the twenty listed RIGHTS that no longer apply to my life situation, and that should concern you, because if mine are gone, so are yours, you just don't know it yet! <https://tinyurl.com/2j3anpflh>

This first link is a very brief but capable document showing you what happened to the USA! It gives the back story that you need to know to understand what this process is and why you should look deeply into it in order to live the life where we are in fact FREE people living with RIGHTS GIVEN BY GOD, not men: <https://markethive.com/networkpro/blog/thestateofthecorruptedaddress> or <https://tinyurl.com/yjy6r6nd>

I've watched many hours of videos and have watched from a distance as several "newbies" have jumped on this bandwagon and are leading others through this process of changing their "status" from a U.S. Citizen (of the defunct, bankrupted USA, Incorporated in the District of Columbia) to "Living Private" and outside of this fake government created by man, of man, and for a limited group of men. You're basically pulling yourself out of their jurisdiction so they can't come and force medicate you, take your property, even if it's paid for, and many other actions they CAN take if you're in their jurisdiction and fail to comply with whatever they come up with. I heard from a friend who was following one of the newbies and sent a letter to the IRS and now they're after her for over \$500,000. I expect she'll be able to get out of it after what I'm about to share with you, but I want you to see that it's extremely important that you follow a proven leader with a proven track record. Basically, we've been taken over from within.

I watched another interview last week where two well-meaning, zealous Christian young men were talking of the efforts of one of them who shared that he's guiding a group of about 200 people through this "Change of Status" process, and how several of them had been sued after doing some filing or letter writing, under his guidance. He shared that he "felt really bad but...". Yeah, that's not going to get it for me!

Another man is traveling all over the US and charging people \$4000 for a weekend seminar and recently had a Civil Peace Flag hanging from a pole when it's supposed to be displayed as a banner. Telltale signs that the person doesn't know what they're doing. He contacted me asking me to join some "association" and touted that Donald J. Trump and Don, Jr and...are in it and I just needed to send him \$2300 a year". I'm not a person who NEEDS to belong to things. In fact, I tend to avoid those things. Someone sent a friend request and had this wrongly displayed flag as their profile picture, so I carefully informed him, and he ended up sharing the details of attending this seminar and that was the flag he was asked to send up the pole and how he expected only "8 people on the planet" knew that detail...LOL. He also shared that he and another attendee spent 7 hours on the phone and concluded they had been scammed. Be Careful!

Then I saw on YouTube in August of 2024, that Arkansas had established their Common Law Courts in the early part of 2024, as has every state now. I put a post on Facebook announcing this and someone shared a link with me given to her by a friend who'd been looking into this for years and found "the man" she feels is the most legitimate and trustworthy. I've been immersed in his videos, spent an hour on the phone with him. **He's been doing this for 16+ years and not one client has had an issue with a government agency including the IRS!** That's quite the contrast to the new guys on the block. His company has created tons of free videos to view and he's all over the internet so plenty of viewing options. After you're convinced that you want to take the next steps you can sign up to have him/his team walk you through this process and it's only \$49/month. Click on the following link and you'll be asked to confirm you want to go to HISAdvocates.org, Click YES and you'll be taken to his free content that will help you learn more about this PATH TO TRUE FREEDOM and you can eventually proceed to the VIP Member status: or <https://tinyurl.com/2tjf269r>

Again, please note: This document is intended to be for educational purposes only. It is not intended to be legal advice and you should not rely on it as such. It is highly recommended that you seek legal advice as to the

Fourth Option: Cal Washington's Notice of Imminent Liability

You Have the Right to Protect Your Health and Home

Whether it is unsafe trespassing technology or other unwanted interventions, InPowerMovement.com can help you reclaim authority with the use of their commercial administrative process that anyone can use. "Our community members have expressed concerns about super technology and other interventions that claim to progress society forward as a whole, but that also carry tangible risks that affect the health and safety of our homes, and often for the sake of profit. Please learn more about our causes below and subscribe for updates." <https://www.inpowermovement.com/> It appears that this site hasn't fully rolled out for every country. If not, for you, then use one or a combination of the other options.

CONTACT OPTIONS: There's a message icon in the bottom right corner of the NoMoreTowersInTheOzarks.org website. We'll receive an email and get back with you as soon as possible. There's also a CONTACT option on the NoATT.blog site, top line by HOME.

NEXT STEPS: After you've convinced yourself that this is real, here are some next steps to follow:

- Go outside and look at your electric meter. If it doesn't have a horizontal wheel spinning and turning the analog dials above it, logging usage, and instead has a digital read-out of numbers then you have a digital or electronic electric meter known to cause serious health concerns, have privacy & hacking vulnerability, and are a fire & safety hazard. If you aren't sure look up "analog electric meter" in the Images on Google or on one of the many links, I've provided herein. If you find that you have an analog meter you need to look inside and make certain you don't see anything that looks like an antenna (metal post sticking up could be the size of a toothpick). If it's a true analog which could also be checked with a meter, then I'd put a locked cage on it immediately so it can't be changed out without your permission. If you determine that you DO have a wireless electric meter at home and/or work, you need to do the following:
- Go to <http://neighborsorganizingagainststrespassingtechnology.blog/2019/12/07/smart-meter-opt-out-policies-by-state/> You should scroll through the entire category and don't let the utility company play word games with you. We're all crazy in their mind so they've learned to treat us as if we don't know what we're talking about. They'll try to make you question yourself by saying "Oh we don't have smart meters". Or "our meters aren't wireless". Or "our meters only transmit 8 times a day" when that's not true at all. I don't care what they call them. I call them energy weapons while they like the term "advanced meters". As we've already learned, the truth is they transmit constantly because they're all chatting with each other, and the system is constantly checking in with the meter. They may only transmit data 8 times a day but that's partial information. **If you find out that you have an "Opt-Out Law"** in your state, then you have a **RIGHT BY LAW** to have an analog "non-transmitting" meter on your home and/or office and no utility company can prevent you from doing so legally. Sadly, they may have to be forced into compliance. Call your utility provider and tell them you'd like to have a "true" analog "non-transmitting" meter installed on your home/office and get your own electrician lined up to be there at the same time. Make sure all the steps mentioned

herein are followed. The main breaker should be turned off for several minutes, and you should have your own electrician inspect the health of the stab connections, THEN the new meter can be installed. Make/put/replace a cage around this so it can't be changed out without your permission. Keep an eye on it and document your efforts. **If you find out that you don't have an "Opt-Out Law"** and the utility companies are forcing these meters in your area you can do the following WHILE you seek to have it changed: Go to LessEMF.com and enter in the search window "Smart Meter Shielding Kit" and/or call or email them for help. You can also call and speak with them as there are other layers of protection you might add. I have no idea if this kit works personally but this company has been in business 26 years so that says something. CHECK EVERY MITIGATION EFFORT WITH A METER and make sure any products you purchase have a 30-day money back guarantee and check for reviews. I am not profiting from or guaranteeing anyone's work or products; just pointing you in a few different directions to get you started.

- I highly recommend searching out an "EMF Expert" to help you confirm the electrical health of your environment. You can search <https://EMF-Experts.com> to see if they have any certified professionals in your area. I've met Steve and Rockie Richards in the Austin area who were trained by EMF Experts. You can reach them through their site at: <https://www.emfresource.com/>. They were pulled into this when his wife had an enormous number of Afib events and then he found the wireless meter that had been installed on their home without their knowledge or receiving fully informed consent. There's also Dr. Ritter mentioned earlier of <https://EMFKnights.net> in Austin. There's another guy named Brian at <https://ShieldedHealing.com> Because this is a new field you may need to look around, seek help online through the many nerds jumping into this, or self-educate. There is LOTS of help online and lots of books and videos. I am NOT an expert by any means or even credentialed so it isn't me.
- Find a group in your area fighting to change this OR FORM ONE as they are now coming at us with wireless gas and water meters too which have the same issues! You can look up terms such as "Texans Against Smart Meters" or Michigan for Safe Technology. They're popping up all over.
- Go to <http://www.antennasearch.com/> and see what's around you.
- Go to <https://neighborsorganizingagainsttrespassingtechnology.blog/> (or <https://NoATT.blog>) Choose to **FOLLOW the blog** as this is where we will come together with ideas, event notifications, or efforts to turn this mess around. The FOLLOW option appears in the lower right corner of the page.
- **GET INFORMED, BUY SOME METERS, MEASURE YOUR ENVIRONMENT, COMMIT TO LEARNING MORE AND REACH OUT TO LEGISLATORS, JOURNALISTS..., BUT MOST OF ALL, YOUR NEIGHBORS! WE THE PEOPLE ARE THE ONLY SOLUTION.**
- Go to Amazon.com and look up books having to do with "EMF" or "Radiation" and see what you see. LessEMF.com also has lots of books on the subjects at hand.
- **PLEASE DONATE** to help cover costs of distributing booklets, running websites/blogs, buying paper and ink, and the enormous amount of time this has taken and continues to require of me! Sending a "love offering" is psychological and moral support and a big THANK YOU!

I learned a lot from this journey as you'll soon see and feel strongly that we need to make immediate changes to some things we're not doing, such as: We need to be having REGULAR public service announcements about this. We need to educate unions and train electricians to use these meters to check their work. We need EMF surveys done on homes and work environments ASAP and as a routine check. We could start by addressing and mitigating issues PRE-occupancy and at the time of sale. Perhaps we need to REQUIRE residential builders to put Romex in conduit, as in commercial buildings, to eliminate a whole host of rookie errors that can and do make people sick? Sparing expense at the cost of the health of the population is no way to save money. There are babies sleeping in these homes and they absorb ten times the radiation of an adult. They have thinner skulls, are developing an immune system, and are at a high rate of cell division. Many of our illnesses are being attributed to the electrification of our world so they are preventable. An intelligent species would recognize and resolve these issues.

Sensitives: The Untold Story is a 1-hour documentary on YouTube that reveals 20% of our population are "Sensitive" to their environment. They established that "this is not a disorder but is a trait". I refer to us as "the early warning messengers" and when a lot of us begin reporting that we don't feel well around some new chemical or technology you should LISTEN, not laugh and discount us as being weak. What I found most interesting is that this group is primarily the artists, writers, poets, musicians, intuitives, healers, and pollinators so if you aren't laughing at the bees for their collapsing colonies you shouldn't be laughing at us. We are warning you all about the environmental imbalance. **Maybe your own child or grandchild will be one of us.** You can view this documentary at the following link: <https://tinyurl.com/5d4nz474>

GenerationZapped.com is a documentary you need to put on your viewing list. It's a very recent movie you can watch for \$4.99 online and free through many library apps. It has a lot of statistics that will shock you! <https://generationzapped.com/>

Resonance ~ Beings of Frequency. You can search it by title on YouTube or click here from the online version of this booklet: <https://tinyurl.com/yt232ecd>

Canary in a Gold Mine documentary:
<https://tinyurl.com/2exzc3kc>

An Invisible Threat documentary: FYI: when the "expert" lists the radiation from the sun among manmade sources as if they are all the same you should know that he's an industry troll and you should be offended. Radiation from the sun is not PULSED MICROWAVE of a manmade origin! VERY INFORMATIVE 1 hour 11-minute video: <https://tinyurl.com/5n7vx6xk>

The Electric Ecosystem by Sander Funneman

"The Electric Ecosystem opens the door to the electric life of the natural world. It is a scientifically substantiated introduction to the unseen energy dimensions of humans, animals, plants and the earth. Bees charge themselves like batteries, birds google their own internet for the best restaurants, frogs float on magnetic fields and seals use their radar moustache. The book creates a different view of the world, where chemical reactions are no longer the only decisive factor, but where everything appears to revolve around electricity and magnetism. Next to this, it also introduces a concerning reality, because the ever-increasing use of artificial radiation involves risks. Radiation from transmitter masts, for example, damages trees, affects cow behavior, impacts the human immunity system and derails cell growth. Numerous questions are issued to fuel the important dialogue that is now needed to find new and safe ways forward with the, as yet, unknown electric side of nature. Also, the discovery of the electric side of nature brings a hopeful perspective because, even though sources of radiation may cause damage, specific frequencies can be assisting in processes of healing. The book raises awareness about the vulnerability of the natural electric ecosystem in which everything appears to be interconnected." <https://tinyurl.com/3xabcdum>

As this document is improved or dead links are found and corrected, you should know that you'll always be able to find the latest version on the NoATT.blog site as the Featured Post.

If you want to get mad enough to help me, look at this document and start making certain that your "officials" have signed their Oath of Office. If not, you need to know why and that it was likely not an accident but they're avoiding personal liability! Don't let them get away with this!

Attention Fellow Humans

I've noticed the cell towers are more menacing, are lower, and there's more of them in locations of low industry, low employment, or lots of retirees owed pensions & where more people are likely on gov't programs.

That's not a coincidence,
it's genocide as are 850-1000+ towers in a 3-mile radius. You're also openly carrying a microwave radiation emitting device "phone" which says you're okay with this!

**Your shepherds are silent.
Are they also blind?**

Go to NoATT.blog and search "849" and you'll see this is real!

THINK ABOUT YOUR KIDS AND GRANDKIDS AND LET'S CHANGE COURSE!
